the inductance as given by the formula, no matter how accurately I
measure its diameter, length, turns-per-inch, and number of turns,
but that shouldn't stop us from placing a non-multiple-choice
question regarding the use of that formula on an exam.

Only questions which would not give rise to subjective answers would
be appropriate for a non-multiple-choice exam.

It doesn't sound like cable TV leakage. All their signals are much higher than the frequencies you are hearing the noise on your HF receiver. That part about the TV signal being degraded if the cable was leaking is baloney, though.

From what you describe, the noise could be any of a hundred types of common everyday equipment types. For starters, put your receiver on battery and turn off the MAIN breaker to your house. This should eliminate anything within. If outside the house, I suggest you equip yourself with a battery source on your 10 M rig and traverse the neighbor looking for where the signal may be strongest. Shorten or eliminate your antenna to keep the noise from saturating your receiver until you believe you are at the source. Can't offer much help at this point as you will probably be needing to knock on doors and go from there.

HINT, if the signal gets too strong, keep tuning higher in frequency, (your scanner perhaps) to use the highest frequency you can hear it at as your source to locate.

>A simple question - what is ZUT?

ZUT means "CW Forever!"

The Z-code was widely used by the military on both CW, RTTY and land-line TTY circuits. The U.S. Coast Guard radiomen (a rating that no longer exists in the USCG) were a tight-knit group (the entire USCG itself has fewer members than the NYPD has police officers, BTW), and with the demise of code in the Guard, ZUT was adopted as the unofficial Z-code signal for those who loved CW.

The Guard kept a continuous 80 year watch on 500 kHz (600m), the international maritime CW calling and distress frequency.

73 and ZUT!

Yep, it works that way with radios too. Just plug your 100 watt rig into 120 volts instead of 12 volts and you have an easy 1000 watts. You can use either AC or DC, either will bring the same results....

The Movie of the Century!

14.300/14.313 Days
3.865/3868/3894.5/3901/3950 Nights

Starring:

Porkbutt as the Man running from Justice
Sid Mahan as the "Strongest Station in the Nation"
==========
The Jerry Springer show as this NG
Slyvester Stallone as "CBRambo"
Hanoi Dan as himself
Richard Simmons as AF2Y
Ken Starr as KT4TR
Pee Wee Herman as WA9KJI
Chuck Norris as Richard Lee of the FCC
Ted Turner as KC8JBO
Louis Farrakan as N9GOR
Masataka "Huggy" Noda as Himself
"CrossFire" as the "Great Liberty Net"
Art Bell as himself
Casey Thrower as the Skipper from Gillagans Island
Archie Bunker as Burp Fisher
Sean Connery as KV4FZ

Plot: This movie will a look at one America's favorite pastimes: Ham Radio. In doing the film, it was suggested that it take a look at the wild side. "People wanted a exciting film" said one of directors. "We had a SW radio tuned to 14.300 one morning and it clicked, this is it! People will come in droves to see this film. Here you have a man trying to fight for justice (KV4FZ)and a man fleeing justice (PorkButt). What a unique plot! We take a day in life of the Frequncy and put it into a movie. We then go to 3950. This is where the fun begins. It happens to a Saturday Night. This "Liberty Net" What a riot! I never knew sickos like WA9KJI jsamming the Liberty Net, in the name of ridding America of "Nazis" What a story, We shot on location at KJI's "QTH" and David was very helpful. We take shots at everyones places, W1WCR's W9ART's and K5BLB's place. What a movie! I'll Get a Emmy for this one!"

A sneak preview will shown as a trailer at the end of the First Star Wars "Prequeal" May 1999

Enjoy!

AT-31625 - what freq is it designed to run at - I don't have databooks
to hand but is this not designed for 1-2Ghz operation? I might be
wrong on this.

If it is then it is likely to be only conditionally stable at lower
(higher gain) freqs. The databook s-parameters allow you to calculate
this. If it is only conditionally stable you won't get 50 ohm on
inpuit and output simultaneously.

But in periods of high QRM, one can continue a QSO in progress by pulling out a key at any time. In other words, you may not find any CW until you get to the CW end of the band, but you may initiate a CW contact at anytime.

When the bands are crowded, contacts can be made, resumed, and continued, when phone is not practical.

So the a question might be: Why limit your potential enjoyment of the bands by NOT knowing the one mode that is universally applicable, and required for license.

Seems like a simple answer.

From Tad Cook, K7VVV
Seattle, WA December 4, 1998
To all radio amateurs

SB PROP ARL ARLP049
ARLP049 Propagation de K7VVV

HF radio conditions were good over the past week, with moderate geomagnetic conditions and a rising solar flux. Sunspot averages for the week were more than double the week before, and average solar flux was up over thirty points. The high point for the week was on Sunday, when solar flux reached 167.8, which was the highest it's been since the beginning of September. Average solar flux for the previous ninety days was 131 and 132, and solar flux was above this level on every day, indicating an upward trend.

Now that November has passed, we can see that solar activity is back up, after a dip in October. Monthly average solar flux for June through November was 108.5, 114.1, 136, 137.7, 117.3 and 138.8.

For the next three days, Friday through Sunday, look for a solar flux of 150, 148 and 148 with a planetary A index around 10 for all days. After the weekend solar flux should dip just below 130 around December 9, then bounce around between 130 and 135 until December 17. From December 18 until December 27 flux values should rise to around 150.

N7SO writes to remind us of the NASA Space Weather Bureau website at spaceweather.com. There is a lot of data on current conditions, as well as a great 10 day animation of the sun at http://spaceweather.com/java/solar-anim.html. Don't miss the current image of the aurora updated every seven minutes, as well as information on solar flares.

Sunspot Numbers for November 26 through December 2 were 132, 121, 110, 126, 186, 153 and 144 with a mean of 138.9. 10.7 cm flux was 156.4, 158.9, 164.8, 167.8, 163.4, 162.7 and 151.7, with a mean of 160.8, and estimated planetary A indices were 11, 8, 5, 6, 13, 13 and 4, with a mean of 8.6.

It could possibly be a TV set in your house or re-radiating from a neighbors
TV antenna. It could also be a defective TV amplifier in your/neighbors
house. And of course the cable system could be generating noise not only
from the actual TV signal, but from their switchable power supplies.

Likely problems with CATV is improperly grounded and/or terminated ports.
Sometimes the crews do not instal the terminating plugs at the amp's. This

allows leakage. And of course the F connectors are bad for poor ground connections.

Humm. This is the first time I have heard that definition. Back when I was much
younger, the older technitions used the term for the sound made by an
audio amplifier, or radio usually caused by a faulty electrolitic
capacitor. Some early transistor radios would get this particular
problem quite a bit.

I remember seeing transmitters using tubes like this. I ask a ham friend
of my father who was using one if this was a normal operation and he said it was.
To an eleven year old kid, it was pretty impressive to watch. :-)

You guys wanna hear something really funny?? These guys are going around to the African-American newsgroups and telling about this incident that happened two weeks ago! Isn't that a hoot? They are asking for legal advice on how to get Rich off the air! AND...they are giving Pork Butt's name and callsign AND attaching a copy of the racial slur wav file!

Aren't these guys an absolute riot???

I just moved my business and I get inconsistant am reception although
several miles closer to the broadcast (Seattle). I have a elcheapo
am/fm radio, but I've tried my shortwave (Radio Shack name, forget
who actually makes it) and it isn't any better.
What kind of antenea or receiver would I need to get ? The station
I want is 570 AM (KVI).

Yes, but only one of the answer choices provided can possibly be
correct. The multiple choice format serves to resolve ambiguity
in this case. Without it, you need to be more specific in the question
so that there is only one possible answer. That's actually very hard
to do for many engineering questions.

>Another example of a question from an ideal-world setting would be:
>E2C02 When operating during a contest, which of these standards
>should you generally follow?
>Answer: Always listen before transmitting, be courteous and do not
>cause harmful interference to other communications.

Well, that answer is certainly non-real world in that most contesters
don't do that. But that's more a reflection on contesters than on proper
operating procedures.

>A question such as that should *not* be one designated as a fill-in-
>the-blank, nor should:
>
>E2C03 What is one of the main purposes for holding on-the-air

>operating contests?
>Answer: To enhance the communicating and operating skills of
>amateurs in readiness for an emergency.

Yeah, not one in a hundred would come up with that answer unless
it were printed right in front of them.

>When I wind an air-core inductor by hand, I know the coil will not have
>the inductance as given by the formula, no matter how accurately I
>measure its diameter, length, turns-per-inch, and number of turns,
>but that shouldn't stop us from placing a non-multiple-choice
>question regarding the use of that formula on an exam.

I suppose we could ask, "What formula always gives the wrong answer
when calculating the inductance of a coil wound by Jeff?" But that's rather
ambiguous too. Nearly any formula could be used.

>Only questions which would not give rise to subjective answers would
>be appropriate for a non-multiple-choice exam.

Yes, and such questions are hard to formulate. Even with multiple choice
exams, the answer to choose is often the one which is least wrong rather
than the one and only correct answer. Real world engineering is a lot
messier than pure math.

On Thu, 03 Dec 1998 07:46:58 -0600, Gary Hoffman <gary@carcs3.wustl.edu> wrote:
>My next question is what is 'motorboating'?

Motorboating is an unintended low frequency oscillation in a
circuit. It is called motorboating because it sounds like the
putt, putt, putt of old fashioned motorboat engines (this is
from many years ago when motorboat engines were of the
hit and miss design, like old John Deere tractors, or old
stationary pump motors). Its most likely cause is an
inappropriate choice of bypass capacitors, ie too large,
in an amplifier which is only conditionally stable at low
frequencies.

>While I'm at it, I've gotten some conflicting definitions
>of 'fire bottle'. What do you think it means?

That generally refers to glass envelope tubes with directly
heated cathodes. The exposed filament gives them the
appearance of having a fire inside. But more generically
it can refer to any tube with a visible heater glow. Cold
cathode tubes obviously don't qualify, nor do tubes with
a metal or ceramic envelope.

Do not let your definitions become confused. If one definition is out to lunch, then it will cast a shadow of doubt over the rest of your list. Picket fencing is picket fencing -- rapid fading in and out of the signal. Motorboating is a phenomenon in an amplifier, normally audio, where there is unwanted feedback (usually due to a bad decoupling capacitor) which results in a slow oscillation at a rate such as that it sounds like a motorboat i.e. "putt putt" or similar. The two terms refer to two quite different things.

> more they stay the same...
>
>
That's true, but there's another side to the story... You might of bought commercial equipment then, but you also modified the hec out of it for improvement. The emphasis wasn't on just the means to communicate with another station, it was to adjust your equipment, improve stability, experiment, and sound good. If you had the tools to do the machining, you probably built a lot from scratch.

Many amateurs nowadays have never wound a coil or used a soldering iron. They just buy the rice box, buy the coax (with the connectors pre-attached), buy the antenna, and plug it all in. If they want to change their sound they buy a new mic (as long as the manufacturer has one that comes with the right rice box connector). It's all telephone quality (300 Hz- 3 KHz) audio. No challenge.

Like most things these days... More convenient, but somehow not as good.

SB QST ARL ARLB103
ARLB103 New 1999 W1AW Operating Schedule

Effective January 2, 1999, the W1AW code practice and bulletin
schedule is changed. What follows is the complete schedule of times
(in Eastern Time) and modes:

Time (ET) Mode Days
------------------------------------------------------------
9 AM CW Slow Wednesday, Friday
9 AM CW Fast Tuesday, Thursday
4 PM CW Fast Monday, Wednesday, Friday
4 PM CW Slow Tuesday, Thursday
5 PM CW Bulletin Daily
6 PM Digital Bulletin Daily
7 PM CW Slow Monday, Wednesday, Friday
7 PM CW Fast Tuesday, Thursday
8 PM CW Bulletin Daily
9 PM Digital Bulletin Daily
9:45 PM Voice Bulletin Daily
10 PM CW Fast Monday, Wednesday, Friday
10 PM CW Slow Tuesday, Thursday
11 PM CW Bulletin Daily

Visitor Operating Hours are 10 AM to 4 PM ET, Monday through Friday.

Frequencies (MHz)
--------------------

CW: = 1.818, 3.5815, 7.0475, 14.0475, 18.0975, 21.0675, 28.0675,
147.555

DIGITAL: = 3.625, 7.095, 14.095, 18.1025, 21.095, 28.095, 147.555

VOICE: = 1.855, 3.99, 7.29, 14.29, 18.16, 21.39, 28.59, 147.555
```

CW frequencies include Morse Code practices, Qualifying Runs and CW bulletins.

CW Slow = Slow Morse Code practice = 5 - 7.5 - 10 - 13 - 15 WPM

CW Fast = Fast Morse Code practice = 35 - 30 - 25 - 20 - 15 - 13 - 10 WPM

CW Bulletin = Morse Code Bulletins = 18 WPM

Digital Bulletin = BAUDOT (45.45 baud) and AMTOR-FEC (100 Baud). ASCII (110 Baud) is sent only as time allows.

Inquiries regarding this new schedule may be directed to W1AW, 225 Main Street, Newington, CT., 06111, or via e-mail: w1aw@arrl.org.

SB QST @ ARL $ARLB104
ARLB104 Northwestern Division Director Mary Lou Brown, NM7N, SK

ZCZC AG05
QST de W1AW
ARRL Bulletin 104 ARLB104
From ARRL Headquarters
Newington CT December 4, 1998
To all radio amateurs

SB QST ARL ARLB104
ARLB104 Northwestern Division Director Mary Lou Brown, NM7N, SK

Northwestern Division Director Mary Lou Brown, NM7N, of Anacortes, Washington, died December 3, 1998. She was 71. Brown was just re-elected without opposition to a new two-year term on the ARRL Board. Her husband, Bob, NM7M, reports that Director Brown collapsed and died at Los Angeles International Airport, apparently after suffering a heart attack. She was returning from Australia where she had just taken part in the Lord Howe Island, VK9LX, DXpedition.

DXpedition member Nick Hacko, VK2ICV, called Brown was ''the most-liked person'' on the DXpedition. ''Although I knew Mary Lou for only a few days, it was very clear to me and to the other Lord Howe operators that she was an exceptional person,'' he said in an Internet posting after learning of her death. He said Brown helped out with all phases of the operation and deserved ''a lot of credit for helping the rest of us get a great lot of enjoyment out of our trip.''

Brown has been the ARRL Northwestern Division Director since 1995 and was a vice director from 1990 through 1994. She also served as a member of the ARRL Executive Committee.

ARRL Executive Vice President David Sumner, K1ZZ, said Brown was held ''in the highest possible esteem'' by her peers on the ARRL Board. He noted that Brown was elected to the Executive Committee after just one year as a director, and was re-elected twice. ''Her enthusiasm for Amateur Radio extended beyond organizational affairs to on-the-air operating, especially operating with friends,'' he said. ''Anyone who was fortunate enough to able to call Mary Lou their friend--and their numbers are legion, all over the world--knows the true meaning of friendship.''

Brown received her doctorate from Columbia University. Before retiring to Washington, she taught physical education at the University of California at Berkeley and served as department chairperson.

Funeral arrangements are incomplete.

Northwestern Division Vice Director Greg Milnes, W7AGQ, accedes to the position of Director. Milnes also was just re-elected to a new two-year term. The vacancy in the position of Vice Director will be filled in due course by appointment by President Rod Stafford, W6ROD.

It could be a computer UPS. Mine developed a very similar problem after several years of usage. Think in terms of harmonics of a 100kc pulse width switching circuit with slow modulation of both the pulse width and the rate.

The VEs who administered an exam can't "customize" the test and
tailor it to an examinee's particular interests.

It's important to realize that an Extra can run a testing session
and in doing so, is taking the place of an FCC examiner, and thus
has a grave responsibility to ensure that the examination process
runs according to the regulations that the government has set forth.
This is why you see so many VE- and VEC-related questions in the
Extra Class question pool.

A long, long time ago radio shack sold a dual variable power supply kit. The two supplies could either be independent or tracking. The supplies put out 0-20 volts at 0-1 amp. The circuit had voltage crowbar and current limiting. The "kit" consisted of a bare board and an instruction manual. National parts cannot help me until I come up with a part number. I cannot find a part number on the board. If anyone has any approx. 20 year old Radio Shack catalogs --- please look in the kit section. Please email me the part number if you find it.

Or If you have a manual - then I would be happy to pay you for copying the pages for me.

thanks for the effort

richard wd5-hrp

Well, I saw some other responses that are correct as far as they go, but
don't mention clearly the basic problem, which is that all transistors
have an inherent feedback path inside, and at radio frequencies this
matters a lot. You may notice that s21 is finite, which indicates that
feedback exists.

There are two ways of making your amplifier stable:

- sacrifice gain by mismatching at input or output or both. That seems
to be the current trend, judging by other responses.

- provide an external feedback path that feeds back a signal equal in
amplitude but opposite (or nearly) in phase to that coming through the
internal feedback. If you do this with only approximately the correct
phase, it is called 'neutralization'. If you take steps to get the phase
right as well, then it is 'unilateralization', and this is usually too
much trouble to get right. Neutralization, however, used to be quite
coomon. It is a very old technique, first invented to stabilise triode
tube r.f. amplifiers with a reasonable stage gain. If you use it, you
will be able to get much more gain from your transistor than in the
'mismatch' case, at the expense of (maybe only a litte) extra circuitry.

For details, see any good r.f. textbook from say 20 years ago. It's practicable at 150-170 MHz: not so practicable at much higher frequencies because you often need very small capacitance values (femtofarads, maybe).

> What
>should I be doing on base bias network in order to connect it to 5V
>instead of a separate power supply for Vbb? Is a voltage divider
>okay, or should I have something fancy?

Divider should be OK. Attend to decoupling it properly: you don't want any r.f. getting back into the input circuit through that route!

>Is there any rule of thumb in
>adjusting things to tune a RF transistor?

Well, yes. But it is more or less textbook stuff. For a 'neuted' stage, tune the output, tune the input until it oscillates, tweak the neuting to stop it oscillating, tweak the output tuning, tweak the input tuning....until you get tired, or the response shape and gain look OK on the sweep generator....

sci.electronics.basics,sci.electronics.design,sci.electronics.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi,

I desparately need help from folks on this NG on tuning RF transistor. I am trying to tune a Hewlett-Packard AT-31625 to operate at 150-170MHz with about +27dBm (500mW) of output power and Vcc=5V. Right now there is a ferrite-bead and a 10ohm resistor in the collector circuit (collector, 10ohm, FB, then Vcc). In the bias circuit -- (base, 470ohm, FB, then Vbb). Emitter is connected directly to ground. This configuration allows me to directly hook up Vbb to power supply to vary the bias voltage.
I tried to measure the s-parameters without any input/output matching network but just coupling caps (470pF) at the base and collector. Then I started the tuning process. I started to tune the input to 50ohm, then tune the output. However, when I got the output properly tuned, input started to oscillate (with positive s11). When I could fix the oscillation problem, the input/output is mismatched again. Besides tuning, I could also vary the bias voltage..... so at this point I have too many things to tune at the same time and I am stuck.
Is there any proper procedure to tune a RF transistor? What should I be doing on base bias network in order to connect it to 5V instead of a separate power supply for Vbb? Is a voltage divider okay, or should I have something fancy? Is there any rule of thumb in adjusting things to tune a RF transistor? Any input is certainly welcome, as I desparately need help. Thanks.

Artur

> interested Drew.

Hello, Hanoi Dan. I see you're no longer content with being a radio cop on 14.313; now you are going to attempt to police the Internet as well. Must be nice to have no source of employment and, consequently, such an abundance of free time on your hands, Hanoi Dan. But I'm afraid I'm going to have to take you to task on this one. Actually, I have two grounds of contention which I would like for you to respond to:

By notifying me that you have reported my actions to a federal agency, I assume you believe me to be guilty of the commission of a crime. Would you please explain to me, Hanoi Dan, which particular illegal or unlawful act(s) you feel I am guilty of here? I was not aware, Hanoi Dan, that offering an audio clip for download over the Internet constitutes a violation of the rules and regulations of the Federal Communications Commission (FCC.) But I'm sure an expert in communications law such as yourself will consider it a high honor to be able to explain this to me.

Furthermore, Hanoi Dan, could you please explain how it is that the Federal Communications Commission (FCC) has jurisdiction over the content of material which is posted to Internet newsgroups by private citizens.

Waiting anxiously for your explanations, Hanoi Dan.

The transmission was made over the Amateur Enforcement Line, by at least two people, live, while Mr. Whiten was spewing his hate. That's a little hard to "doctor".

And Mr. N8ECW, you must not be familiar with the rules and regs regarding obscene, vulgar and indecent language on amateur radio. If you listen to the wav file again, you'll notice that vulgarity prodeeded just about every racial slur
Mr. Whiten made.

Also, by Mr. Whiten telling the Commission that they can stick their "Enforcement Line clear up their ass", I'm sure the FCC can come up with some "additional" violations, just for good measure.

B.E.

Surprisingly, there's actually something factual to be observed from your
comment.

With the average age of high-speed code tested hams (General, Advanced, Extra)
is in the mid 60's most of them are probably too old to have sex any more (or at
least
not as frequently :-) (NOTE SMILEY)

That's probably why the total number of those licensed in those classes has
dropped each year for the past several years ... they're dying much faster
than they could possibly reproduce.

>Curt Breneman
>KC2EBP

Curt ...

That's an awful lot of assuming ... and that's EXACTLY the point ...
the question is not sufficiently defined and unambiguous to allow a
single correct answer.

There aren't many opamps out there that even use +-15V supplies
any more ... most devices produced today would FRY if subjected
to split supplies high enough to permit the opamp to swing to -23V.

This (Jeff's original question, that is) is an example of (a little)
theoretical knowledge being borderline dangerous, lacking the
practical knowledge to apply it sensibly.

It's another reason why most "fresh-out" engineers are generally
clueless and incompetent until they've gotten a couple of years of
practical experience and mentoring under their belts ... the world
of academia (staffed by folks like Jeff) has not prepared them any
where near adequately for the REAL world.

> his license or levying a fine.
>
> This is the new enforcement?? What a joke. Everybody ought to do a little
> forgery, what have you got to lose....

It seems odd. But I'm not sure he lost "nothing". Read on:

The FCC advised Lalone that while it was not pursuing a fine at this
time, he could run into problems later if he decides to renew his
ticket or to upgrade. At that point, the Commission said, it might
later decide to designate the issue for a hearing before an
administrative law judge, "in order for the Commission to determine
what, if any, enforcement action should be taken and what action to
take on the application."

In other words, "we don't feel like spending taxpayer money on you
right now, but don't bother upgrading, or renewing in 2004."

4513. W0KIE Satellite Radio Network Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-05 00:00:00 UTC
From: michaelr@ionet.net
Message-ID: <74bhqd$5vp$1@ionews.ionet.net>
Source record: 156360

The W0KIE Satellite Radio Network announces its relocation to C band, GE-1, transponder 12, 5.7 narrow band audio. The following two W0KIE Network feeds are suitable for amateur radio repeater retransmission.

Saturday:

9 pm Eastern, 8 pm Central, 7 pm Mountain, 6 pm Pacific

THIS WEEK IN AMATEUR RADIO (The very latest amateur radio news)

Feed time approx. 35 minutes

Tuesday:

9 pm Eastern, 8 pm Central, 7 pm Mountain, 6 pm Pacific

HOUSTON AMSAT NET (The very latest in AMSAT and NASA shuttle news)

Feed time approx. 1 hour

Other back yard dish owner oriented programming airs on the W0KIE Satellite Network nightly at 9 pm Eastern (or before) Mon. - Sat.

4514. Telecommunications Books FS

Newsgroup: rec.radio.amateur.misc

I have the following books (all in excellent to new condition) available:

Telecommunications Topics by Carne
1999 copyright - Engineer level (includes calculus)
Signals, periodic functions, transient functions, LTI systems,
autocorrelation
and spectral density, probability, random variables, random process,
queues,
noise, information theory, digital voice signals, data signals, error
detection and
correction, AM, FM, PM, digital modulation, spread spectrum, transmission
media, $ 25

Understanding Data Communications by Friend
The title says it all! $ 15

Understanding Communications Systems by Cannon
This one covers all sorts of communication systems -- not
just the data communications like the one above. $ 15

Modern Electronic Communications by Miller
Technician level (Associate degree)
Communications techniques, modulation, TV, antennas, wave propagation,
waveguides, fiber optics, noise,
2nd edition - 1983 - $ 15
3rd edition - 1988 - $ 18
4th edition - 1993 - $25

Intro to Digital Data Communications by Stein
Data formats, UARTs, RS-232, codes, telephone systems, DTE/DCE interfaces,
error detection, protocols, multiplexing, packet switching, LANs
Technician level (Associate degree) $ 22

Digital Electronics by Uffenbeck - Technician Level text
Covers from number systems to shift registers to Programmable
devices to interfacing $ 25

Electricity - Principles and Applications by Fowler
Part of McGraw Hill's "Basic Skills in Electricity and Electronics"
group of texts. Mainly theory, in easy to understand
explanations. $ 20

Electrical Measurements by Smith & Wiedenbeck
Classical measurements book - Engineer level $ 15

Principles of Electronic Communications by Mandl
Includes modulation, amplifiers, noise, transmission lines,
antennas, etc. $ 18

Although not radio, I also have some collectible scout books available:

Boy Scouts:
Exploring Handbook - 1958 - close to new condition $ 20

Handbook for Patrol Leaders - 1950 copyright - 1959 printing $ 18

Handbook for Scoutmasters - 1957 - 4th edition $ 18

Scout Field Book - 1948 copyright - 11th printing in 1956 $15

Girl Scout:
Girl Scout Handbook - "New edition" 1953 hardbound $ 18

Brownie Scout Handbook - 1951 copyright - 1955 printing - some wear - $
15

Red Cross:
1986 American Red Cross "Expect the Unexpected" $ 2

If you would like more information about any book, please e-mail to
W8EK@usa.net. All books are in good shape.

Pull the main circuit breaker that feed your house with AC.
Set your radio up to work on a battery.
This will help you determine if problem is in your house or outside.

4516. ARRL - Friend or Foe? (was RE:Give me a break)

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-05 00:00:00 UTC
From: Gareth Crispell <gareth@capecod.net>
Message-ID: <36695D65.BED0AC63@capecod.net>
Source record: 156363
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I am not particularly a suspicious person by nature, but during the
past year I have begun to wonder about the true motives of the ARRL.
I am beginning to think that in the hierarchy of priorities that the
ARRL publishing and materials profit making ventures are truly the
top dog. To say that by lowering standards to attract more people to
the hobby will increase the "quality of amateur radio service" to
the American people is like some kind of strange legal doublespeak.
Reminds me of a fellow who said " that depends on the definition of
what is, is."

>>
>>
>Really? And what facts do you base this assertion on (yet another
>unfounded accusation on your part specifically designed to get someone
>pissed)?

How quickly you forget, OYEster. Shall we bring up the infamous "Proudhawk Web
Page Incident" of a few months ago? Perhaps I should publish the original
version of that page and let the participants here judge for themselves as to
whether you are actually an OYEster or not.

>As for Postings by Mr. Oyen, He hasn't posted anything new here since
>29 September (this per a deja news search). Incidently, I did hear
>from him by phone last week. He took the slumlord to court and is now
>living elsewhere outside the state of Arizona (Huron Kansas I believe

I have had something like this. It was worse around 7 MHz.

It was from a neibourg's touch lamp. I could even toggle it's lamp on and
off by transmitting a carrier on 7 MHz.

ARRL has info on this on their server.

You're a joke, Hanoi Dan, and everyone knows it. Here you are...one of the top troublemakers on 20 and 75 meters today...and you attempt to divert attention by threatening ME, Hanoi Dan. Threatening me with the FCC...even though I don't even own any amateur radio equipment and have never owned equipment capable of transmitting on either 20 or 75 meters. I'm rolling over on the floor, Hanoi Dan! The all-knowing, allmighty, self-proclaimed "radio wizard" gets on USENET and TALKS TOUGH to me...threatening FCC action for...now get this...for offering a file for download over the Internet! HAW HAW HAWWW!!! Keep it up, Hanoi Dan. You're good, cheap entertainment, if nothing else. However, your total ignorance of the law and the role of federal agencies

should be an embarrassment to you.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

You too? It certainly gets really busy, especially when you're trying
to get other stuff done, like senior project and trying to stay active
in the hobby! I have learned alot though, in the past couple of weeks,
not so much from school but from working on my senior project--an 80m CW
transciever. Building it, having the tools to debug it (all the test
equipment in the lab, etc), having had some classes on theory, and last
but not least, having wise knowledgable profs around to help with
questions has taught me more about electronics than the year or two of
circuit theory!

Good luck on the finals!

I heard someone in the background say, "You've just been taped by the Amateur Enforcment Line", (or something to that effect). Anyone could have said this.

> And Mr. N8ECW, you must not be familiar with the rules and regs

Vulgarity? Like you posted last week under RG-58-U, or whatever handle it was you were using? (If that was indeed you) I have no use for racists. I have even less use for hypocrites.

I have the following items for sale:

maker description model price
comments

sony audio/video STR-AV300 $35
right speaker output does
receiver
seem to work properly,
everything else seems to
work properly

pioneer 6-disc changer PD-M500 $45
tried it and works!

sony dual cassette TC-WR720 $35
tried it and works!
player/recorder

panasonic vcr PV-1366
$25 pretty sure it works

pioneer 6-disc changer PD-M401 $40
tried it and works!

sony dual cassette TC-W233 $20
tried it and works!
player/recorder

Yeah they are really cheap, but this stuff has been in my closet since the Eighty's. If you are interested let me know I'll tried to include the manuals and remote if I can find it. All are in that Eighties electronic black and have a digital display exept the TC-W233 which was my very first audio component back in 198--something :) anyway I hope somebody find some good use for this stuff. ***note*** I am willing to split the shipping but NOT the COD charge. E-mail me at either: gp429@aol.com or cdhoste@rocketmail.com

thanx

I would have to say, I guess it depends on how much you want to read into the question. If no data was given about the op-amp, then I would assume it to be an ideal model (infinite gain, infinite input impeadance, zero output impeadance, and an infinite slew rate), hence the question then would be testing the basic theory of an ideal op-amp used in an inverting amplifier. Obviously, the -23 volt answer would be incorrect if you were to hook up a 741 with a single ended supply at 12 volts and gave it a sinusoidal input at 50MHz, but specific details like that were not given in the question, thus leading one to deduce that maybe it was not meant to be a practical question, rather a theoretical one testing the basic theory of an inverting amp. Darn near every technical question asked could be said that not enough information is given to obtain the correct answer. If a student was to claim this on every test question he or she takes, how would the professors ever know if that student has the general concept down. With out the knowledge of the general theory how would someone ever get to the point where they could understand the limitations of a specific op-amp in the practical world. I think it is a good question and that the spirit of it is to test the general theory on an ideal op-amp. I would agree though, they should have added in parentheses "(assuming and ideal opamp and rail voltages of +/- 50 volts)" or something similar, that way there would be no debate over the answer.

I've received many good suggestions so far, and I appreciate the response. A lot of other folks seem to have a similar problem as well.

I have not "thrown the main breaker" yet, simply because I don't like the idea of having to go around and reset all the clocks, VCR's and anything else that blinks for my attention after an extended power outage. But, let me tell you what I found out last night.

I started suspecting the circuit that all of the radios were on because when my scanner was operating on the AC adapter, the interference was much stronger than on battery power. It dawned on me that I still had my Yaesu KSC-14 Rapid charger plugged in. I unplugged that device and the level of the interference dropped significanly, on the order of 2 S-units on 10 meters and even more further down the spectrum.

Now I must listen very closely to find it, but it is still there.

My next step is to determine if the interference is still originating within the house or not. At this point, it is no longer stong enough to create a problem. I just have to remember to unplug the Rapid Charger when I'm not using it.

It has become a quest to locate the source of the problem though, so more to follow....

I have some modern Electronics Fundamental Text books available. All are currently in use at various colleges. They are all Associate Degree (Technician) level. All books are NEW.

Basic Electronics by Grob - 8th edition - 1997 - $ 30

Electronic Principles by Malvino - 6th edition - 1999 - $ 30

Electric Circuit Fundamentals and Electronics Fundamentals - 3rd edition by Floyd - 1995 - $ 30

Electronic Devices and Circuits by Hassul and Zimmerman -
Conventional Flow version - includes student workbook
I think this is a 1998 copyright, but it is still in shrink-wrap, and I do not want to unwrap it to find out for sure. $ 30

Prices do not include shipping from Florida. By the way, most of these are big, heavy books, weighing about 6 pounds each.

E-mail to W8EK@usa.net

For other ham items for sale, see http://www.gnv.fdt.net/~kenmar

Thanks.

You make the mistake of reducing (or even eliminating, though the
ARRL proposal doesn't go far enough in that direction) with "lowering
standards" ... it's not a "lowering of standards" to align them rationally
with the technical realities of today's world.

We no longer emphasize sundial reading or Roman numerals in
our educational system either, since they are not necessary skills
in today's world ... neither is Morse ... its use is purely recreational
and there is no need or justification to force all to learn it in order to
gain totally unrelated privileges.

There is NO "lowering of standards" involved in reducing or eliminating
Morse testing "requirements" because they serve no necessary purpose
in today's world ... all they do is stand as an unnecessary and arbitrary
barrier to participation by otherwise perfectly qualified individuals.

4551. Re: What radios did you start out with?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-05 00:00:00 UTC
From: George Harizal <K8HLJ@centuryinter.net>
Message-ID: <366A0E21.70AF074D@centuryinter.net>
Source record: 156398

August of 1957 - First went on the air with a Meissner Signal Shifter (in Xtal Ctrl Mode) running an 807, and a command set receiver on 80 mtrs. Later upgraded receiver to Hallicrafter SkyChallenter and Hammarlund HQ-129x. Antenna was a Windom. Later upgraded and went high power with a homebrew 813 amp. I still miss the blue glow of the 866 mercury vapor rectifiers.

First VHF rig was an HW-29, the "Sixer" which I bought in kit form for $39.95 direct from Heathkit. It used 3rd overtone crystals. Had to buy the $4.95 modification to use 8 meg crystals until I picked up a BC-459a command set and modified it to use as a VFO. I still have the rig on the shelf....and the rush of the super-regenerative receiver still wipes out the entire band when I turn it on!

First HF phone rig was another kit....the Hallicrafter HT-40. First SSB rig was a National NCX-3 triband Xcvr which I got in 1966. I ran that rig for 15 years at home, portable, and mobile. I started out running it mobile with a dynamotor. I tied the B+ and screen lines together and ran the whole thing on 250 volts. Not much power but it worked. Finally added a 600 VDC dynamotor that kicked in from the PTT relay. I had to wait a couple of seconds after keying the mike to wait for the dyno to come up to full RPM but it worked! I even ran mobile CW with a Vibroplex bug (on smooth roads.) Finally added the Heath HP-13 solid state mobile power supply in 1970 and I didn't need to run the dual car battery system anymore. I would have liked to have added the Heath HA-14 "Compact Kilowatt" mobile amp but never got around to it.

My intro to 160 meters was a Central Electronics 20-a exciter. I used the Meissner as the VFO for it. Only ran a few watts but with a halfwave antenna on 160 centerfed with 450 ohm open ladder line, it put out a great signal. I still use the same antenna which becomes 2 half waves in phase on 75 for an even better signal.

I still see a lot of these old rigs at hamfests....and I still want that HT-32 as much today as I did back then. BTW, how many hams remember the famous "CQ" calls made by Mike, W2OY on 75 meter AM? "CQ no Lids, Kids, or Space Cadets" I miss him too! Good times were had on the "BR" net (Buzzards Roost) on 75 and the Pepsi Cola net on 160.

Well, enough reminiscing...I think I'll check out the Boat Anchor NG and see if I can find a good price on an HT-32 for sale.

To advance from Advanced to Extra, just pass the 20wpm CW for Extras
only test, and the Extra theory written examination. .

And while I'm at it, don't you think it's unfair not to publish the CW
test questions and answers like on the theory exams. I think a
discrimination suit is in order.

It also seems kind of strange that there were so many questions regarding satellite transmission/reception modes in the Extra pool. Why is it so important for an Extra to know this when most satellite communications can be done by a person holding a Technician class? The questions just don't seem relevant. -- Tom - N8ECW

I heard the .WAV file. I thought it was racist and deplorable. However, the only thing that Mr. Whiten *may* have violated is 97.1(e), because this type of behavior certainly isn't promoting good will. Also, tapes and audio files can be doctored. The FCC would actually have to catch him in the act of making racist transmissions in order to do something, and they certainly don't have the budget or the manpower to do anything as such. -- Tom - N8ECW

> I done to make it operate this way? Am I driving the transistor too
> hard? Thanks.
>
> Artur
> 12.4.98

(Excuse me if any of these sound blatantly obvious :)

1. Have you driven it into compression to get +25dBm out? If so,
then the transistor may be going partially into cut-off &
dropping the average Icc (class A2). Removing the signal lets it
be at its actual quiesent point (230mA). To verify, drive it &
scope the output, or use a spectrum analyzer to see excessive
even harmonics.

2. Check for oscillation at output - maybe your input termination
upset your tuning vs. your signal generator lead (maybe your
signal generator Zo isn't *exactly* 50 ohms at your test
frequency, or at least not equal to that termination).

2a. Also check that termination! Someone may have overloaded it
& shifted it off value (I used to work for a company that makes
them - they use a wimpy chip resistor).

3. Shorted input cap? but that should DECREASE Icc... Is the base
biasing circuitry stable? Check for noise there...

4. Check input grounding - maybe ground plane is discontinuous.

5. Are you using chip components? If not, maybe you're seeing the
results of parasitics.

If you can't figure it out, get yourself a JPS ANC-4. It'll do a job on the noise. I have one and it amazes me how well it gets rid of local noise. It connects between the antenna and the radio and with its own - seperate antenna - picks up mostly the noise and lets you cancel it out using some phase adjustment on the ANC-4.

Message-ID: <3669408A.C335559@netsoft.ro>
Source record: 156442

Thank you for reading this message.
My name is Stefan Samu(24) and my callsign is YO6OBH.
I am 3rd year student at the University of Tirgu Mures
(geography-history), Romania.
If you want to clean your hamshack, or maybe you have already done it,
and you have
an extra HF radio that you have not been using for long time. You have
not used it,
because it is old and you have another one that is much better. If you
want to get rid
of your extra old radio please donate it to a student of Romania. You
get rid of an
unused gear, get free space and I can get out on the air. It would be
one more ham out
on the air.
Unfortunately students in Romania can hardly pay their study expenses
(books, education
matterials,...) not to buy radio.
Please help if you can. Shipping could be paied. Thank you for your
time, attention and
kindness and I would like to wish you a very Happy Christmas and a New
Year.
Please answer via Email:isamu@netsoft.ro

Making the rounds. Two Baseball fans and a ham were on their way to a game when one noticed a foot sticking out of the bushes by the side of the road. They stopped and discovered a nude female, drunk and passed out. Out of respect and propriety, the Indians fan took off his cap and placed it over her right breast. The Padres fan took offhis cap and placed it over her left breast. Following their lead, the ham radio operator took off his call letter cap and placed it over her crotch. The police were called and when the officer arrived, he conducted his inspection. First, he lifted up the Indians cap,replaced it, and wrote down some notes. Next, he lifted the Padres cap,replaced it, and wrote down some more notes. The officer then lifted the call letter cap, replaced it, then lifted it again, replaced it, lifted it a third time, and replaced it one last time. The ham was getting upset and finally asked,"What are you, a pervert or something?" "Why do you keep lifting and looking, lifting and looking?" "Well," said the officer, "I am simply surprised; normally when I look under a call letter hat, I find an asshole."

>I figured that in the 900 MHz range even a ï¿½ a watt will go over a mile at
>line of sight

If it's not spread spectrum, which operates under Part 15.247, then it's a
"low power" 900 MHz phone (could be analog, could be digital, I don't
remember for that particular model number), which operates under Part
15.249 ...

15.249 limits the fundamental output power to a field strength of 50 mV/m
(that's millivolts per meter) at a measurement distance of 3 meters. With
a typical 900 MHz cordless phone type of antenna, that equates to only
about 1/2 milliwatt (-3 dBm ... or less, if the antenna radiates better than
what I've assumed) at the antenna. (That's a difference ... 20-30 dB from
the SS systems which can output up to 1 Watt but generally radiate about
100 mW 'cause higher powers eat batteries too fast, reducing "talk time.")

However, that's more than enough to "go a block," given a clear path.
(you stated that you got 1 block 'with the base up on your roof' ...)

BTW ... modifying part 15 unlicensed devices is generally illegal ... they
have been approved as designed and tested ... if you are a licensed
ham, the 902-928 band *IS* available and you could modify equipment for
ham use ... however, it would no longer be an approved cordless phone
and you might be violating FCC rules by using it in that way.

Also, the various spread spectrum devices available under Part 15
(cordless phones, wireless LAN cards, etc. generally do NOT meet
AMATEUR restrictions on the use of SS (spreading sequences, etc.)
which are (ironically) FAR more restrictive than the Part 15 rules.

> else use these tube in the FT 101 E etc..

You have a rare set of finals which were custom made for Yaesu by
the Japanese division of Amperex, custom designed for the 101 line.
Regular off-the-shelf tubes will work also, after proper neturalization.
The FT-Logo ones were constructed for minimal oscillation. More a collector's
piece than one for their functional benefit really - Keep them in the carton
as a sales-pitch if you ever sell the radio, their a "cherry" atop a sundae
so-to-speak..

4589. Review of last night's "Liberty Net" on 3950Khz...The ZOO of Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-06 00:00:00 UTC
From: cbrambo@aol.com
Message-ID: <19981206163617.29940.00001212@ngol08.aol.com>
Source record: 156262

Bad news: I went out last night and, as a result, did not get to hear "The Great Liberty Net" on THE ZOO. Good news: a simple patching of my SW receiver's audio output to my VCR's audio input has yielded 6 hours of VHS tape to listen to and comment on this afternoon.

As we begin our journey, W1WCR calls the net. Several jammers as usual, but with a twist. There are NO sounds of marching music, "Anchors Aweigh", "Them Faggots", etc. Only QRM'ing in Morse code. Hmmm...this would seem to be a way to QRM, yet hide the voice of the offender. Did SOMEONE get a nastygram from the FCC this past week????

>Pretty sad.

I know we've had our differences before, Tom, but I couldn't agree with you more here. The only thing left worth listening too on ham radio is, sadly, the "ZOO" frequencies. Ask any SWL. Most of them don't even bother tuning the ham frequencies (unless they're looking for something to fall asleep to.) The only exceptions to this rule seems to be that SWLs enjoy listening to the circuses on 14.313, 3950, etc.

Hello all,
Would like to buy one or two working Kenwood IF-10C interface boards with cables. The IF-10C has been discontinued. Kenwood currently sales the IF-10D model which is not compatiable with the IF-10C model. The IF-10C was sold as an internal option for the TS-140S and the TS-680S HF rigs for computer control of the radio. Please email me at: kb5rfn@juno.com if you have one to sale. Would like to purchase two working units.
73's, Mike H.

I have the following items for sale:

Maker/Description Model/Price
sony audio/video STR-AV300/$27
receiver
right speaker output
not functioning properly
remote included

pioneer 6-disc PD-M500/$43
changer
6-disc and single disc magazine included

panasonic vcr PV-1366/$23
remote included

pioneer 6-disc PD-M401/$37
changer
6-disc magazine included

Yeah they are really cheap, but this stuff has been in my closet since the Eighty's. If you are interested let me know I'll tried to include the manuals. All are in that Eighties electronic black and have a digital display, anyway I hope somebody find some good use for this stuff. ***note*** I am willing to split the shipping but NOT the COD charge. E-mail me at either: gp429@aol.com or cdhoste@rocketmail.com

thanx

When you read one of Carl's anti-code, anti-incentive licensing responses, in which he cries that the ARS is far behind the times and that hams know nothing of modern technology, keep in mind two things:
1. He's been a Technician class licensee for 20+ years.
2. When he talks about engineers, he's really excluding himself, for he only has a high school diploma.

Gee, so many responses - like calling CQ from a DX site. Thanks, and I guess my memory, like my hairline and waist line, have faded a bit. Sure thought I had it right 'though. Of all the things I miss the most in my advancing years, the one I miss the most is my memory.

I would bet the term "rig" was used because it's a heckofa lot shorter
to send on CW than "radio".

As for "radio" meaning a BC radio, I got my Amateur RADIO license to
use radios other than BC.

Indeed there needs to be a license reform, I think it should have the
following 5 license classes:

1. Novice - 5 wpm code, basic electronics, basic FCC regulations, Minimum HF
priveledges (primarily CW except on 10 meters, small portion allowed for
SSB)

2. Technician - No code advancement, but must already have a novice class
license. Gives unlimited VHF/UHF privledges.

3. General - 13 wpm code, more advanced electronics and regulations, must
pass novice and technician class first, receives extensive HF priviledges

4. Advanced - 18 wpm code, more technical examination, obtains more HF
privledges.

5. Extra - 20 wpm code, even more technical exam, obtains all prioviledges
available to amateur radio service.

I really think the above system would work quite well, any takers?

What is this crappola about not being able to pass a code test because of a physical problem. Horse shit. These same people are out driving cars and running marathon races. Tell me they cant pass a code test. I dont think its the officially handicapped person who is asking for a doctors paper on the code requirements. In the past I have read about blind and deaf people actually working CW. I remember a fellow, silent key now, who could work CW at 100 wpm,I am not kidding.He had MLS. We had some really nice QSO's on CW. I would joke with him by asking him if he was coping my QRQ CW on a tube.

Hello. I may be interested in getting a used Yaesu FT-100 HF/6m/2m/440 all-mode rig sometime in the near future. But I am a little concerned about the price of one (although I know it would be much cheaper then getting an all-mode HF rig, 6m rig, 2m rig, and 440 rig). I�m interested in knowing about what the going price is for one new, and for a used one in good condition. Any help is appreciated. Thanks a lot for reading!

Baloney, Jeff ... while I don't have a piece of paper handed out by
some academic institution staffed by twits like you, I've been an engineer
for over 27 years ... I've been a member of the IEEE for about 15 years now,
and I've worked as an engineer (and not entry-level, mind you) for the likes of
Caltech/JPL, Rockwell-Collins, (as a consultant to Hughes, Loral, Westinghouse,
and others) and more recently US Robotics and now Lucent.

I've also taught electronics at the college level in California (a credentialed
position,
teaching one course per semester evenings while working full-time in industry.)

Give it a rest with you academic holier-than-thou-ness.

Carl - after reading many of your posts, I for one have come to
realize that you have a very keen mind. Knocking off the extra class
license should be a snap for you. This would certainly shut up all
these people up who say your no code position is based on inability.
I also think this accomplishment would then give great additional
strength to your arguments. Go for it Carl !! It will blow a lot of
minds! I would look forward to working you on 14.168 MHz.

Just in time for the next meteor shower!!!!!

If you are not happy with the current offering of software voice keyers, how about one that was designed from the ground up with MS operators, contesters, and ragchewing in mind! If your PC has a Windows compatible sound card, its time you try this digital voice keyer. (Heck, one of the users even figured out how to do MS CW skeds with it.)

After some intense development effort, VoiceKeyExpress, the newest digital voice keyer, is now available.

Check out http://home.earthlink.net/~n7qjp for the details. You'll be glad you did!

New version released today, version 1.2.15.

Next release will integrate completely with FT-Manager CAT control software. Release date later this week.

You mean like you miss all those digital QSOs that take place at signal'
levels where you can't even hear the presence of Morse??? You assertion
that 50% of QSOs are Morse is IMNSHO, a crock of malarkey.

>>its use is purely recreational
>>and there is no need or justification to force all to learn it in order to
>>gain totally unrelated privileges.
>
>No one is being *forced*. Look at you - you've been a Tech for 20+
>years.

And I (and many others) have been unnecessarily and arbitrarily
restricted from privileges for which were are completely qualified ...
all because we have no interest in and refuse to waste time learning
to "beep real fast."

>Moonbounce, satellites, meteor scatter, pulse, VEs, VECs, AMTEX, RTTY,
>FM, ATV, Packet, FAX, SS, compandored SSB, photoconductivity, telemetry,
>are *all* "purely recreational" in the ARS yet in order to upgrade to
>Extra, I am learning about each and every topic. I really have no interest
>in any the above, yet I will voluntarily take the time to become know-
>ledgable about them. None are "necessary skills" for amateurs

As has been pointed out on dozens of occasions, you can skip the questions
on FM, ATV, FAX, or whatever and still pass the test and get a hgher class
license. Those of us with no interest in Morse have not been afforded that
option
WRT Morse.

>Your signature speaks of NCI's attempt to bring the ARS into the 21st
>century - one wonders - what *is* your vision of the ARS in the 21st
>century?

An amateur radio service with reasonable, rational regulations and
testing requirements which relate to the privileges obtained by passing
the test. An ARS where technical knowledge and skill is, once again,
valued above the ability to "beep real fast."

>No ragchewing? No SSB? No FM? No CW? No analog comms?

If the ARS were to follow the trends of modern technology, as it should,
if it's to meet its Part 97.1 objectives, we'd see a rapid migration to
more spectrally-efficient technologies. Legacy modes would still be
permitted for use by those who enjoy and insist on the re-enactment
of quaint techniques from the distant past, but the "mainstream" would
be more "with it" in terms of technology.

>Every ham designing and building his own gear?

That would be a wonderful, admirable outcome, but it's unlikely. However,
with an easing of the antiquated rules we now have which hamstring
experimentation in order to protect the "turf" of the old-timer's legacy modes
at all costs, we would see a resurgence of experimenting and building
and more people who are already technically competent would become
involved because it would actually be interesting.

>I believe your view is simply no
>code tests so you can get an automatic upgrade from being a 20+-year Tech.

I believe that you just wish to conduct a personal attack on me, in order to
attempt to discredit my motives ... I don't think I'll play your game.

[snipped remainder of Jeffy's attempts to attack me, when he knows
NOTHING about me other than the fact that I'm a "no-code-test heretic."

>Tell us your view of ham radio of the 21st century, Carl. What would
>you permit and what would you purge?

I can't think of a single thing that needs to be "purged" ... though your
feeble attempt to cast me as some sort of Stalinist totalitarian does not
go unnoticed ...

Wait, ... maybe some restrictions on contests ... only 1 weekend per month,
max, maybe ... and then only on a single band ... something to keep the
electronic paintball warriors from unreasonably trashing the bands for everyone
else ...

But if you're talking about modes, there's not reason to "purge" (were you
looking for a nastier word for "ban" ???) anything ... In fact, if *I* were to
rewrite Part 97.1 from a technical perspective, I'd eliminate the ridiculous
"occupied bandwidth" rules and permit a lot of interesting, modern modes.

I would require a higher spectral efficiency (bits/sec/Hz), however, for modes
that occupy more bandwidth than a SSB signal (on HF, at least) and restrict

spectral power density to reasonable levels to minimize the potential for interference with legacy modes ... but the "marketplace" of what works best would be very unfettered by traditionalist protectionism if I rewrote Part 97.

The idea that Morse might have to compete on a level playing field with more modern technologies scares the living crap out of your, doesn't it Jeff?

Yup, I guess as a regulator, I'd be your worst nightmare incarnate ... but I'd venture to say that some sound engineering judgement behind the rules would go a LONG way to improving the ARS and its potential for survival long into the future.

Sleep well, Jeff ... :-)

>not every HF ham has SSB or digital, but each knows code.)
>Jeff KH6OO

I'll bet a large percentage of HF hams don't know the code. They learn enough to pass the test to get on HF and then go on phone to never use it again. None of the hams I grew up with can do CW, and none of the hams I worked with could either, even though they are licensed for HF....

Notice how the "zoo" is a topic of discussion? Maybe it's the only interesting thing about amateur radio. Everywhere else it's either a contest, a net trying to rack up check-ins without serving any real purpose, old overweight white men talking about the weather and their various medical problems, or if you're in the 10 meter band, it's some goofus who only wants a ten-ten number. Something really interesting gets jammed, or is denounced. Pretty sad.

Not that it would matter to a boorish ill-mannered jackass like you,
but have you noticed that none of the hams you refer to as "assholes"
GROSSLY violate netiquette with a 20 some line signature like you
do? Netiquette says anything over 4 lines is rude boorish behavior,
guess which asshole on this newsgroup (Burt Fisher) constantly
violates that?

It figures that someone that attempts to paint themselves as Mr.
Proper like you do would be a _complete_ jackass in reality.

I think your fascination with the elimination of the code
requirements has not allowed you to see the eventual possible
progression of this trend toward easement. Lets face it - any
multiple choice exam in which the answers are provided ahead of time
is no test at all. I believe the direction in which we are heading
is the elimination of all HF exam requirements of any kind. Probably
within 10 to 15 years. I hope I am wrong, but I suspect that I will
be correct. Can you imagine where cell phone technology will be in
25 years? Instantaneous cheap phone communication to all points of
the planet. People may not be exactly breaking down the doors of the
ARRL to become hams no matter what they do!

From: dishey@hotmail.com
Message-ID: <74dcru$s7d$1@nnrp1.dejanews.com>
Source record: 156314

Jim Bass is coming back to TVRO talk in mid-December.

Jim Bass, who some of you know as the founder of Lets Talk Radio, which was on Spacenet 3 in 1991-1992, and the QSO Amateur Radio video programming uplinked on Spacenet 1 in 1991, will be bringing back Lets Talk Radio to C-band, shortwave, and Internet streaming RealAudio.

More focus will be made toward small dish users than in past TVRO talk programs. What with the Internet involved the need for a big dish to be part of the forum is unnecessary.

LTR Internet RealAudio tests are underway at:

http://www.letstalkradio.org

http://web2.airmail.net/~fkenn

http://www.fnl.net

This is just TEST MODE.

More details to come.

The Extra has always required an additional theory test...when I
upgraded to Advanced in 1974, the Extra had additional theory.
It was the same in 1977 and still is today.....the ONLY ticket
that did not need additional theory was the Technician...when
upgrading to General in the 60s and 70s....later they split the
theory test between them....requiring Techs to take additional
questions (I think 13?) to get a General....along with the code
that is!....now the Tech to Tech Plus does not require theory
(or is that incorrect? Heck, since I have my Advanced and ONE day
will get my Extra...but why?...I dont keep up with the lower
tests...)

It's not a "fascination" ... many of us just recognize how badly Morse
testing and other outdated, backward restrictions have hurt/are hurting
ham radio. We want to see ham radio rejuvenated so that it stands
a chance of surviving for grandchildren (and theirs), rather than being
dropped as a waste of valuable spectrum because it's so out of date
and backward that it no longer provides the public interest value that
it was originally established to provide. (note that "public interest" has
NOTHING to do with hobbies or fun or the popularity of ham radio with
the general public ... it has to do with "How does the existence of ham
radio benefit society as a whole, and is it worth the valuable spectrum
allocations it enjoys?")

>has not allowed you to see the eventual possible
>progression of this trend toward easement.

Since removal of Morse test requirements is not a "lowering of
standards" but simply a rational alignment of test requirements
with the technical realities of today's world, there *IS* no "trend
toward easement" ... (you've apparently been paying FAR too
much attention to Vince's posts .... :-)

Read NCI's comments at http://www.nocode.org (under "articles")
(and my own at my personal web page, listed in my sig) ... you'll find
that the TRUTH is that we are VERY concerned with the loss of
emphasis on (at least basic) technical knowledge and competence
amongst today's hams compared with the average level of several
decades ago ... this hasn't happened overnight and it's not primarily
caused by our testing system (though I'll agree that the tests could
be improved by computer randomization and other simple means)
... however it's also NOT related to Morse testing in any way.

>Lets face it - any
>multiple choice exam in which the answers are provided ahead of time
>is no test at all.

While I believe the tests can, and should, be improved by enlarging
the pools and using computer-generated tests which sufficiently
randomize the variables and answers to preclude most people from
passing without actually *knowing* the material being tested, I also
don't think that the tests are the "real enemy" ... the failure rate at
VEC testing sessions is actually remarkably high ... I don't recall the
exact figure, but I was surprised and it was high enough to poke a
big hole in the concept that "the tests are a cake walk."

The "real enemy" is the *idea* which "incentive licensing" has
promoted that the license is some sort of "graduation certificate"
and passing the test indicates that one "knows all that's necessary
to know." A very large percentage of the current ham population
seems to have this view ... and it's clear that they "crammed" to
pass the test and haven't cracked the books since they got their
ticket.

>I believe the direction in which we are heading
>is the elimination of all HF exam requirements of any kind.

Forgive my directness, but that's absurd. The FCC has an
obligation to assure that we are at least competent enough to
reduce the possibility that we will harm ourselves or our neighbors
or that we will inadvertently operate faulty or mal-adjusted gear
in a way that interferes with more important radio services.
The rules/regs and theory tests will NEVER go away ... that would
be totally contrary to the Basis and Purpose of ham radio, as outlined
in Part 97.1.

>Probably
>within 10 to 15 years. I hope I am wrong, but I suspect that I will
>be correct. Can you imagine where cell phone technology will be in
>25 years? Instantaneous cheap phone communication to all points of

>the planet. People may not be exactly breaking down the doors of the
>ARRL to become hams no matter what they do!

Many people find technology intriguing and want to tinker, experiment,
learn, and even sometimes invent.

Those are the people we can and should attract (with realistic, modern
licensing requirements and technical rules which don't hamstring
experimentation with new modes and techniques.

Those are the people for whom ham radio was/is intended ... people with
an interest in radio technology for its own sake who will train themselves
and become more knowledgeable simply because it's fascinating, not
to get a postcard from some rare country or see their name in the
contest scores of QST ... and people who will devote their time and
expertise to building systems, making preparations, and training to
provide public service communications in times of need.

It's time that we make the changes necessary to bring us to the present, before we allow some outsiders to do it for us. The changes to the licensing structure is LONG overdue. Not just the testing, but the structure as a whole. We simply do not need all these license classes. At one time we may have, but no longer. Three would do the trick and certainly four would. Let's get behind one of the proposals and make it work.

Extra 100 questions and 5wpm (Current Advanced and Extra Bands)

General 100 questions and 5wpm (Current General, Technician and Novice Bands)

Technician 100 questions and no code. (No HF)

Why are we beating a dead horse. The world is changing before our eyes and we are sitting around moaning about what used to be. Well, it used to be that we used smoke signals too, or yelled or sent pony express, but no longer. I want to keep the code as a requirement and if we don't adjust, we will lose it altogether.

Come on folks.....blaming the ARRL, W5YI or a foreign country, doesn't change reality. We have to change for the future. And if you think I don't care about ham radio, then you don't know me very well.
I am very involved and would like to see the Amateur Radio Service continue. If we keep calling it simply a HOBBY, then we will end up with the spectrum we deserve as hobbyists. Keep that in mind.

Unfortunately, Carl, you are looking at a statistical misnomer. I also believe VECs purposely misrepresent that number for their own pecuniary interests -- selling more study guides with exact questions and answers.

At every VE testing session I have ever been at, whenever people come to take a particular examination, they usually pass it. At that point, almost every VE in existance will tell him/her: 'here, try taking the (next class) exam - it doesn't cost you anything more, and you might pass it." Of course, in most instance, since the person usually hasn't done ANY prep work for that particular exam, they end up failing it if they do take it. Also, a small percentage, naturally, does.

The same applies equally for the Morse examinations. Every testing session I have been to gives the Morse exams in descending speed order. You are encouraged to take all three tests, since you 'might pass' the higher-speed test, and get credit for a higher element. If you're there for the 1(A) element, chances are you're going to have a 66% failure rate that day on your code tests.

These observations are not merely my own anecdotal evidence, I know and have conversed with dozens of VEs which basically indicate what I've stated above is the 'de facto' standard for conducting a VE session.

So, the net effect is we end up with people taking and failing exams at a 'high rate' because they take exams they are not prepared for. This situation artifically skews the test results to a 'high' failure rate, when a cursory examination of the cause shows the simple answer why.

The real measure of the examination process should be to calculate the pass/fail percentages on those elements people are coming to take, having specifically 'prepared' for them. If someone is coming to get their tech license, when we should measure the pass/fail percentages on elements 2 and 3(a). Yes, the individual may also have 'failed' element 3(b), and element 1(a), 1(b), and 1(c) at the same testing session, but the individual was probably encouraged to take exam elements s/he wasn't prepared to take.

Ahhh, you're guessing again, Carl. You have no figures whatsoever to
back up your claims that the license is considered a graduation
certificate or that a large percentage of hams think that they know all
they need to know. You made that up.

It seems that you are still quick to discount anything which doesn't
suit your definition of amateur radio's "Brave New World". Most of what
hams do and have done since the existence of amateur radio is to rag
chew, chase DX and exchange QSL cards. Contests similar to those we
know today have existed for nearly SEVENTY years. There is still room
in this hobby for innovators and experimenters as sure as there is space
for traffic handlers and those who drill as practice for handling
emergencies. I much prefer to participate in an amateur radio service

with room for a variety of interests rather than your tight circle of those people "for whom ham radio was/is intended" as defined by Carl.

On Sun, 06 Dec 1998 14:02:26 +0100, Darko Jakas <djale@EUnet.yu> wrote:
>das anybody know how to connect a mechanical teleprinter to a PC RS232
>Darko:)

That depends a bit on the age of the teleprinter. Older units used a 60 milliampere current loop, newer units used a 20 milliampere current loop. Loop closed is mark, loop open is space. RS232 is not a current loop. It uses voltage levels -12 volts and +12 volts to indicate mark and space. You need a converter to go from RS232 levels to current loop and vice versa. You could buy these ready made at one time from Black Box, I don't know if they're still available. But it is fairly easy to build one using an optocoupler.

You have to provide a loop current supply in either case. This is a constant current source adjusted to provide either 60 ma or 20 ma as appropriate with the loop closed. (60 ma loops require fairly high voltages, be careful.) You insert the optocoupler into the loop and drive its input with the RS232 levels through a current limiting resistor. The phototransistor in the optocoupler then opens and closes the loop in step with the mark and space voltages on the RS232 side.

To go the other way, insert a series resistor in the current loop, bridge it with the input of another optocoupler, and use the phototransistor on the output to operate a pull down between +12 and -12 (you only have to swing between +3 and -3 for the PC port to work).

For a 60 ma loop, you may have to add another transistor in darlington configuration to the one in the optocoupler to handle the loop current. A solid state relay can be used instead as long as it is intended to switch DC (many SSRs only switch AC).

The other issue you face is that older teleprinters used Baudot code while some of the newer teleprinters used ASCII. So you need a program on the PC which uses the appropriate code. ASCII is the PC's native serial code, so most terminal software will work. Baudot will require special terminal software.

You have to get the baud right too. Old teleprinters operated at 45.5 baud while newer units often operated at 110 or 300 baud. You can configure the UART in your serial port for the latter since they are standard PC rates. The UART may not be able to handle 45.5 baud. In that case, you'll have to "bit bang" using a status line instead of using the port in normal fashion. That requires special software too.

Newer teleprinter terminals such as the ASR33, TI Silent 700, etc used a 20 ma loop and ASCII coding at 110 or 300 baud. Older machines like the Mod 15 and Mod 28 used 60 ma loops and Baudot at 45.5 baud. The former can be adapted easily to the PC serial port, the latter are more of

a challenge. You might want to use a code and speed converter box for them. The Handbook had a project to build one of these for a number of years, I don't know if it is still in recent issues.

Why don't you stop sitting on your license like a chicken trying to
hatch an egg and upgrade ? You may find other aspects of ham radio are
as much fun as listening to liberty net and criticising everywhere you
can.
I don't know why you have remained a tech plus for so long but if you
have a disability waivers are available.

No. And your memory must have faded, because it wasn't true in '77, either.

But wait awhile longer, because the CW requirement is likely to be abandoned,
to grease the chute for the masses.

When Dave speaks of the primary interests in ham radio not really changing over the years, I believe this is right on the money. From my experience (thousands of rag chews over the years) the majority of today's hams are basically appliance ops with some variable technical/repair/circuit skills. Just because your can diagnose and change out a power supply bleeder cap (for instance), this does not make you or me any electronic wizard. The hams of earlier generations who often home brewed their own rigs are passing and certainly not being replaced by any large numbers of new licensees. The real bottom line for the future of amateur radio is money. I think we will probably loose all freqs from VHF up to commercial interest. Nobody really cares about HF so that is what will be left. The hams 25 years from now will be those who are interested in antique radio communication and there may well be a renewed interest in home brewing antique radios. These will be a relatively small number of people. The majority (myself included) who are the "appliance types" will have moved on to other then current technology toys. I think computer generated holograph transmission will become pistol hot. Even with today's technology 8 year old kids can "audio and video QSO" via computers all over the world without any license at all. What can ham radio offer them???? Carl - wake up and smell the roses! There is a new future coming that is going to leave us in the dust bin of history.

Have patience Pat! The licensing structure as a whole will probably
disappear within 20 years or less. I think you are right to put
emphasis on the word hobby - that is all it is and there is nothing
wrong with that.

What kind of logic is this.....I cant believe that anyone could use such an anology.....

We no longer emphasize sundial reading or Roman numerals in
our educational system either, since they are not necessary skills
in today's world ... neither is Morse ... its use is purely recreational
and there is no need or justification to force all to learn it in order to
gain totally unrelated privileges.

I have just picked up a new R7000 for use at a school club station and while I was doing some preassembling I noticed changes were made from the first ones with regard to construction and measurements. My question is the measurement the directions call for between trap CT1 and CT2 which per the insructions calls for 6 inches is not possible....if you put the traps end to end the measurement is still about 6 3/8 inches. I wonder if anybody has had any recent experience with this antenna??? The instructions I have are dated 6/98 and the earlier one I have is dated 1/96. I am looking for information with regard to the most recent model run.

Thanks and 73,

Tom , dont wait to long. soon the entry level classes will be grandfathered into your status. When I passed my General Class 44 years ago I thought I was all set. I guess if I had waited long enough like the others, in CB Land, I could have accomplished the same thing, if you want to call it an accomplishment.
This is ARRL logic. Incentive, for money that is, they are not talking about incentives in Ham Radio for sure.

> We want to see ham radio rejuvenated Carl - wa6vse

That's never going to happen. The ham radio of yesteryear (Remember that word from the Lone Ranger?) is gone forever. As you pointed out in another post, this hobby is mostly old guys, and they constitute most of the technical hams. When I started there was nothing else that even compared to ham radio. If you wanted to talk to the world or play with radios that was it. Now computers and the Internet give you much more, with no entrance exam. If they were around when I was a kid I'm pretty sure I would never have made the effort to become a ham. And in recent years I have spent more time on my computer hobby than my ham hobby. The average age at computer swapmeets here is probably 20 or 30 years younger than at ham swapmeets. As long as we are allowed to transmit with high power I doubt that the exam will be completely eliminated, but I think the original poster was right on target....

I agree with you 100% but, those people who want to drop the code
reqirement to 5 wpm
dont need to. all they have to do is go to there doctor and tell the
doctor CW makes there ears hurt .slip him a few bucks and have him sign
the the release form on the back of the 610 form and there just a few
written tests away from extra..

This goes on every day. I personly know of
hams who have heart or back problems that
have general and higher licences this way.
nothing wrong with there ears,there just too
damn lazy to work cw and get there speed up
Its a shame that this exception that was ment for people that really
needed it is abused by so many

All I can say is,I got my licence the old fasioned way......I EARNED IT!

Started in '92, built a homebrew 2M FM at 30 W, then a homebrew 6M FM at 40 W. Wanted to do SSB on 2M so built a 5W rig based on the T2, miniR2 ideas. Then a Ten-Tec 2m to 6M transverter kit (got lazy). Homebrew TNC. Homebrew colinear antennas. Just aquired an Icom 245 (almost a boat anchor).

SB DX @ WW $OPDX.386
Ohio/Penn DX Bulletin No. 386

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 386
BID: $OPDX.386
December 7, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W3LEO, W3UR & The Daily DX, K4QD, N6FF, K7CO, W7TSQ, N8WRS, W8KKF, A35RK, CO8TW, DJ5AV & DX News Letter, DL2GAC, F6AJA & LNDX, G4BUE & DX News Sheet, HA5PP, ON5NT, PA0JR, PY1KS, UA0SJ, ZL2AL and ZS6AQS for the following DX information.

W O W !! WHAT A WEEK FOR DXERS!!!!!!!

4X, ISRAEL. The "DX News Sheet" reports that Dan, W0CN, will be active December 5-14th as 4X/W0CN. During his business trip there, Dan's activity will be SSB on 80-10 meters using a TS-450 and wire antenna. QSL via home call.

5W, WESTERN SAMOA. Look for Sakuma, JI3WLT, to be active from Apia as 5W1SA until March of the year 2000. He is currently active on 6 meters using a IC-706 and a six element yagi for 6 meters. He also has a TS-850 with him. QSL via JH7OHF.

A3, TONGA. Paul, A35RK, will be in New Zealand from December 8th until January 31st. While he is gone, Lee Reisenweber (3D2VA/VP2VE) will be "house-sitting" Paul's Lifuka Island QTH. Lee has arrived in Tonga on December 1st, and the callsign A35VR was issued to him. Paul states A35VR will be active no later than December 7th, and activity will last until at least February 1, 1999. Lee plans to be active on all bands, including the WARC bands, 6 meters, and possibly 160 meters. Lee's QSL Manager is WA2NHA. By the way, Paul is taking all 3 of his rigs to New Zealand to get them operational again before returning to Tonga.

A61AJ CONTEST WRAP UP. Bernie, W3UR, editor of "The Daily DX", reports that during their A61AJ operation they had over 15,000 QSOs, most of which were on CW during the CQWW CW DX Contest. They operated as a Multi-Multi entry and broke the Asian record. Their score is going to be around 31,000,000. QSL via W3UR.

BUREAU REOPENS. The French DX bulletin LNDX reports that after 2 years of being closed the FO QSL bureau will run again beginning in January.

CO8, CUBA. In the next ARRL 10 Meter Contest Victor/CO8HF and Juan/CO8TW will be active as CO8HF and be a Multi Op/Mixed Mode entry (Victor on SSB and Juan on CW). Also, Juan states that the log will be available on the Web page: http://db-sales.com/nfdxa/logs/logs.html
QSL via Po Box 12, Santiago de Cuba, CP 90100, Cuba.

EL, LIBERIA. Mark, ON4WW (ex-9X4WW, S07WW, 5T5WW etc.), is now active from Monrovia using the callsign EL2WW. He was spotted this past weekend on 17/12/10 meters. Check 28470, 24891 and 18118 kHz between 1200 and 1530z. His QSL Manager Ghis, ON5NT, states Mark will not return to the Western Sahara, and he is currently sending out the S07WW QSLs. Expect the 5T5WW QSLs before Christmas.

H44, TEMOTU ISLAND. Bernhard, DL2GAC, will be active as H44MS in February, 1999. This is his 11th visit to Solomon Islands. He is currently looking for an experienced CW operator who is able to adjust to local conditions for an operation from Temotu starting February 5th through the 10th. This will be at the same location where H40AB operated last April.

HR, HONDURAS. Bob, W7TSQ, informs OPDX that Gary, N7QXQ/HR6, reports that although most of Honduras has suffered greatly as a result of hurricane Mitch, Roatan Island, although it also had some damage, was spared a great deal of the problems occurring on the mainland. Although he lost his 100 foot dock (which is currently being replaced), everything else is intact, and anyone contemplating a hamming and/or diving vacation should not be afraid to consider Roatan Island. At the present time, he has no ham booking for any of the major contests for 1999. However, Bob, W7TSQ, reports that he plans to operate a Multi Mode/Low Power (Unassisted) in the upcoming ARRL 10 Meter Cotest.

HS98, THAILAND. Just a quick reminder to look for special event station HS98AG to be active this week (December 6-20th) during the 13th Asian Games. Please refer to OPDX.384. QSL via HS1CKC.

J3, GRENADA. Harry, W8KKF, will be active as J37K in the 10 meter contest December 12th and 13th. Also, look for him Thursday and Friday before the contest and Monday afterwards. Operations will be SSB only, and he will QSY to other bands on request outside contest for those who need J3 for significant awards. Harry states that Thursday will be the most likely time for late evening QSOs. QSL to W8KKF with SASE.

JY, JORDAN. "The 59(9) DXReport" states Pete, N3FNE, has been active as JY9NE for the past year and is using the JY bureau for QSLing. He now requests cards be sent to his home callsign N3FNE. Pete's activity is on 40-2 meters until the summer of 2000.

KP1, NAVASSA ISLAND. The preparations for the N1V activity seems to be going very slow. "The 59(9) DX Report" states that they could not obtain new information from the organizer K8RF. Last rumours reported states they were waiting for an official scientific report to receive the final decision to land on the island.

KP2, U.S. VIRGIN ISLAND. Slavek, OK1TN, continues to be active as KP1AD until December 20. During the past week he was heard mainly on the WARC bands and 160 meters. Check 24900 kHz around 1330-1500z, 18071 kHz after 1500z, 10106 kHz at 2100 and 0545z; and 1813 kHz at 0145z. QSL via Czech DX Foundation, OKDXF, Box 73, Bradlec 293 06 Mlada Boleslav, Czech Republic.

NEW PREFIX SERIES FOR DUTCH AMATEURS. Andre, PA0JR, from VRZA (Dutch Society of Radio-Amateurs), informs OPDX that licensed radio amateurs in The Netherlands will be allowed to choose their own callsign. Therefore, the Dutch Administration has opened up new prefix blocks. From mid-December 1998, you can expect the following prefixes on the amateur radio bands:
HF-licenses: PA1 up to PA0; and PB1 up to PB0
VHF-licenses: PE1 up to PE0
Novice-licenses: PD1, 2, 3, 4, 5 and PD0.
The callsigns of these prefixes have a two or a three letter suffix. The above prefixes with the figure '6' are reserved for special event amateur radio stations. They will have one, two or three letters as a suffix.

P4, ARUBA. Martin, VE3MR, will be active as P49M from here until next year (April 20). His activity will be mainly 12 and 17 meters SSB. QSL via VE3MR, or if you don't wish to wait until Martin returns home, send direct to: M. Rosenthal, P.O. Box 4069, Noord, Aruba.

PX, BRAZIL. Alex, PY1KS, will be active in the ARRL 10 Meters DX Contest using the special callsign PX1I on SSB and CW. QSL via PY1KS Bureau or direct.

QSL NEWS AND INFO.....
Juan, CO8TW, who was active in the CQWW CW Contest and the ARRL 160 Meters CW Contest states to QSL via direct or via his QSL Manager:
Juan Carlos Veranes, CO8TW Joe L. Arcure, W3HNK QSL Manager
Po Box 8 Po Box 73
Santiago De Cuba Edgemont, PA 19028
CP 90100, CUBA. USA.
E-mail co8tw@co9nla.uo.edu.cu E-mail w3hnk@aol.com
His logs will be available on the NFDXA's Web site at:
http://db-sales.com/nfdxa/logs/logs.html

Zoli, HA5PP, reports that Eritrean photos (E30HA, E30GA...) are on his WEB home page at: http://www.extra.hu/ha5pp/e30ha.GIF

JT, K7CO, states that his K7CO/6Y5 logs are on-line now at:
http://www.vcr.com/6y5
He also mentions that the 6Y2A (CQWW CW Contest operation) will have a WEB site soon at: http://www.vcr.com/6y2a

RARE DC MULTIPLIER IN THE 10 METER CONTEST. Look for the Potomac Valley Radio Club (PVRC) to again activate K3VOA for the rare District of Columbia [DC] multiplier in the ARRL 10 Meter Contest, December 12-13th (Thanks to the hospitality of the Voice of America Amateur Radio Club).

The multi-operator team (W3LEO, K3IXD, N3NT, K3DNE, and W6HZW) will be active on both CW and SSB. QSLs for this contest only go to W3LEO, CBA, SASE please.

SAD NEWS. It has been reported in a ARRL W1AW Bulletin (ARLB104) that Mary Lou Brown, NM7M, ARRL Northwestern Division Director, suffered a heart attack and passed away at the LAX Airport, Los Angeles, CA, on the way back from the recent VK9LX Lord Howe Island DXpedition. OPDX would like to send our condolences to her family. OPDX InterNet Subscribers will receive ARLB104 as an additional bulletin.

SPECIAL PLEAD TO DXPEDITIONS. OPDX received the following from a station in Africa (Please pass the word!): "I have noticed more and more that a number of DX expeditions will give times for North America, and South America, Japan, Europe and Asia. But what happened to Africa? We are still here, be nice if they took a stand by from time to time for Africa."

SV/A, MT. ATHOS. Monk Apollo, SV2ASP/A, has been showing up on 10 meters lately. This past weekend he was on 28485 kHz listening up 5 kHz between 1330 and 1430z.

TN, CONGO. YL Hazel, TN7OT, was active this past week on a European DX net on 14243 kHz around 0600z. Her signal was reported to be very good from Northeastern Ohio during this time. She has also been reported on the 14252 DX net around 2000z. Also, check the net at 21355 kHz around the same time.

TP50, FRANCE (Special Event). To celebrate the 50th anniversary of the Council of Europe, the club station TP2CE, located in Strasbourg, will be using the callsign TP50CE from January 15th (at 1700z) to January 17th (at 1200z). The club will be active on 80-10 meters SSB and CW. QSL via F6FQK.

UA0, RUSSIA ASIATIC (Zone 18). Look for Yuri, UA0SJ, to be active in the 1998 TARA RTTY Sprint Contest and the ARRL 10 Meter Contest. QSL direct only via: Yuri A. Maltsev, P.O. Box 2304, Bratsk-city, 665700, Russia /Asiatic/.

VP8, FALKLANS ISLANDS. Jan, K4QD, reports that his VP8CRB operation is on schedule from Port Stanley, Falkland Islands. Activity will be between December 26th and January 12th (1999). Efforts will be made to operate bands and modes needed by most hams. Special efforts will be made to contact geographical areas where the Falklands are needed. Jan reports the following:
Low Band: Permission has been secured to use two 150 foot towers spaced 250 feet apart on a hill overlooking Port Stanley for low band antennas. A 130 foot vertical with elevated radials is being erected between them for 160 meters. The 80-40 meter Radio Works Super Loop antenna used quite effectively on Kermadec will also be placed between the towers. A portable trailer and power have been secured for our use at this site.

WARC Bands: WARC band antennas are being taken and a concentrated effort will be made on WARC bands as well as ten meters which has not been operated recently from the Falklands.

RTTY: Significant RTTY operation is planned including the ARRL RTTY Roundup. The special call VP8TTY will be used on RTTY.

Jan also mentions that the logs will be available online during the DXpedition courtesy of Dave/NO4J and the North Florida DX Association. Exact location will be posted on the internet DX Reflectors. QSL via K4QD, Jan Heise, 8595 Sheridan Rd, W. Melbourne, FL 32904, USA, (or via Bureau).

XZ1N UPDATE (by Dick, N6FF). The XZ1N group are currently in the process of dismantling two of the stations (ed. As this bulletin was being prepared). They will have 3 stations left for the duration. They will be concentrating on 10/12 meters with the C3 antenna for the next few days, from 2300z to 1600z. The 160 meters station will be active again once all the contesting is done. Also, look for them to spend time on the other bands (30/40/80 meters). They have worked around 33,000 QSOs so far, with 500-600 on RTTY.

ZL9CI, AUCKLAND ISLANDS. A press release from Lee, ZL2AL, indicates that it there are only 4 weeks to go before the excitement of ZL9CI activity begins. Some of the equipment has arrived in New Zealand for packing and checking, and more gear will arrive over the next few weeks. Two of the operators have regretfully announced that they will be unable to make the trip due to "health reasons" and "unfortunate timings business pressures" (ops Ron/ZL2TT and MikeN6MZ). Two new team members will join the group for the trip South: Trey Garlough, N5KO, and Wilbert Knol, ZL2BSJ. Both of these new operators are excellent CW men! For more details and updates check the WEB page: http://www.qsl.net/zl9ci/
OPDX InterNet Subscribers will receive the complete press release by Lee/ZL2AL as an additional bulletin.

Yes, that's my understanding too, but, in addition to being caused by a faulty
electrolytic capacitor, it could be caused by a gassy audio tube as well.

4673. am coverage in a remote area

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-07 00:00:00 UTC
From: Paul Lantz <plantz@onlink.net>
Message-ID: <74i7jrfju1@onlink3.onlink.net>
Source record: 156155

A person called me today about the feasibility of an non-commercial AM station that would provide coverage to an area 90 miles south and about 60 miles north. The area is almost perfectly flat (ranging from sea level to less than 50 feet above for populated areas and perhaps 200 further away). There are no radio stations in the area other than low power relays -- the nearest commercial stations are 200+ miles south. His group is already operating a low power station in their community and want to extend coverage to a larger area.

What kind of set up could do this?

My own guess is that there is not an economical solution to this question.

But, to be able to provide a reasonable answer I am wondering...

is there a rule of thumb for coverage area based on transmitter power? what kind of signal strength is required for good coverage for simple radios? what kind of strength do you need for better quality equipment with external wire antennas?

I have some radio propagation software (ASAPS) but it is more oriented towards long range communications between commercial or amateur radio stations with reasonable antennas.

thanks for your help.

>Carl - wa6vse

I was kind of arguing on your side Carl, but you failed to read between the lines. Communicator hams and technical hams just can't understand each other sometimes. My satire translated: It's ridiculous to require a 5 wpm code test since you are almost useless at 5 wpm. The argument that knowing 5 wpm code will save anyone is laughable. If we're going to have a code test, make it a real code test, say 20 wpm for all classes, and no multiple guess. Then you will be proficient if and emergency arises and you have your CW QRP rig on your belt. If not then lets forget the code test altogether. I hate doing things halfway. Since I'm good to about 40 wpm that would be fine with me. But since I am a tube type and not good a memorizing, lets see if we can make the written test a little easier. We all want the test to reflect what we're good at, right Carl. Now carefully read between the lines on this one and don't jump to any fast conclusions...

Carl would get along great with Wayne Green. In addition to the above, they both have nothing but contempt for our educational system. Especially colleges and universities. You should have seen his posts ragging on liberal arts degrees about a year ago. Yeah, right. As if someone holding a such a degree is going into electrical engineering.

Ray,
You might try posting in rec.radio.swap also - you might find someone who had converted it for use on the HAM bands and is willing to part with it. And yes, I do remember those radios quite well - my father had that series Motorola in his company car and for a real treat he would sometimes let me make the initial call to his home office then turn it over to him - maybe that's when the radio bug hit me....

Anyway, hope the pointer on the newsgroup helps and good luck with your search.

I see CW as sort of a survival skill. Although the higher WPM requirements seem to be of dubious value, the 5WPM test should remain as-is where-is. Anybody can homebrew a CW transmitter and CW can be pushed through where other modes fail. Like swimming or making fire it's a primitive skill, but there are times when the original is still the best. Don't negate the value of the least(bandwidth) common denominator.

> they need to know. You made that up.

While I, too, doubt that Carl has any statistical basis for saying that, what he describes is an attitude that is certainly widespread. Many people just stop any effort to learn more once they get a license of the desired class. And the inordinate pride some people have in the mere possession of a ham license indicates that they think what they had to learn to get it makes them some kind of expert radio communicator. Realistically, it's what's learned *after* getting licensed that makes an expert an expert. That applies to both the technical and operational sides of ham radio.

I think Carl is wrong about cause and effect, however. Incentive licensing did not cause that attitude. Indeed, if you read the history of IC it's clear that it was intended precisely to counter that perceived problem! I say "perceived" problem because I don't agree with Carl's view that ham radio should consist of only those who are interested in the technology side of radio communications. Those whose interest lies primarily on the operational side have an important role to play, too. As long as they know enough technical material to operate and maintain their stations properly, they should be okay. And that's what the licensing system should be trying to ensure. (Of course, we can -- and do -- have endless debates about what "properly" encompasses and whether the currest licensing system is up to the job.)

Just like sail boats, since Sir Francis Drake and Columbus used sail boats things have changed a lot. We now have motorized boats that by far make sailing obsolete. I live near the ocean here and let me tell you, there are more outdated sailing boats that motor powered boats.
Its like Morse, or as we like to call it, CW,is just as popular to Ham Radio as Sailing is to the Yachtsman. It requires certain skills and its not for the faint hearted. Eventhough one needs not pass a sailing test to sail a boat, it is highly recommended.
CW is the most coveted mode of operations there is or will ever be. That is why Extra Class has the lower 25 khz reserved for CW. The majority of Extra Class Hams are CW ops. Mostly all your DX is on CW. Even on the satelite communications, which is about as high tech as you can get, is using CW. There is no getting away from it. CW is unique.There will never be another mode like it. But like sailing, its not for the faint hearted.

Nah, you got 20 or 30 years more to put up with us CWists. Also, with
a lot of the new kids taking a liking to it, it may be that we outlive
you! Also, there is less strain and stress on the CW side of things,
in my experiences. That may make for an even longer life for us.

Best wishes for a long and prosperous life, anyway.... for all of us.

I had a good friend about 25 years back, who was quadriplegic (sp?).
He ran his CW with a pressure transducer fitted to a tuba mouthpiece.
He did not let a little bit of getgo problem get in his way when he
wanted to do CW. He could do quite well on that mouthpiece key thing.
Others should complain about having it so easy.....

Amen, Brother!

I use it in that spirit, and, as a token gesture of honor for those unsung CWists in the USCG, who have done so much for us in times past, banging on the brass. To them, I doff my bowler.
(That also would include all those who have pounded brass for a living, in times past.)

>> The Z-code was widely used by the military on both CW, RTTY and

There was no ZUT reserved for use in the Z code, so it was up for ``grabs''. Why not put it to a good use? They did! (:+}}...

Also, there was a semi-unofficial organization of same, Zeta Upsilon Tau, that was around, in the bilges, at least at NMN. There were a few final ID cards for that group issued when NMN closed the HF CW watch. They are little treasures of a time, now gone.

The correct term is DISGUST. If he had any consideration for any facet of ham radio outside his own narrow view, it'd be a totally different story. Typical of the technoid-geek-cum-hamradio-operators we see within NCI and it's periphery.

5 wpm is really useless on the band. Kinda like 1st grade reading. How about we make all hams only use CW the first year of their ticket. That would get them up to a useable speed that they would have in reserve for the rest of their ham career....

This is actually a very good analogy. These days, nobody needs to use
a sailboat to carry cargo, or to fish, or to cross the oceans. Yet
many people still choose to use it for pleasure. If Morse code tests
were dropped, people would still use Morse for pleasure.

>Its like Morse, or as we like to call it, CW,is just as popular to Ham Radio

Perhaps it would be highly recommended to pass a Morse code test before
using it on the air, although the same safety issues are not involved.

However, does anyone need to pass a sailing test to operate a rowboat?
How about a small powerboat? And why should they, if they don't plan
on sailing?

Then in essence, you want to go back to the old licensing scheme before there was a no-code Tech, only a 5 wpm tech for VHF privileges? Why regress?

---------- While I am far from an expert on this stuff I can suggest that in addition to what has already been written to you you can anticipate potential sources to include transformers or motors in a neighbor's house. There ws an article in QST about 11/2 years ago that described various episodes of trouble shooting this kind of stuff. The article is less than two years old for sure.

In a previous article, dateach@erols.com ("Tom &/or Elizabeth Skinner") says:

>It's been a long time since I was active in amateur radio. When I upgraded
>to Advanced in 1977, all I needed to upgrade to Extra was to pass the 20 wpm
>code test.
>
>Is this still the case or (like everything else) have the rules changed?
>
>Thanks in advance - Tom, K0PXL
>

I am absolutely certain that back in 1977, both a written test and a code
test were required to upgrade from Advanced to Extra.

>in today's world ...

I can recall a science project from grade school - the teacher had
the class make sundials to demonstrate how time is directly associated
with the rotation of the Earth. We took our newly constructed sundials
outside, oriented them in the proper direction using our homemade
compasses (a magnetized needle on a cork, floating in a cup of water).
Each hour the class would go outside to make the hour marks on the
face of the sundials. I remember we all stayed after school that day
to continue making the hourly marks.

That one science project still remains in my memory. It would still
be an instructive project even today, Carl.

>neither is Morse ... its use is purely recreational

So is moonbounce and meteor scatter and a dozen other topics, yet we
still have to know about them to pass Element 4B.

No one is being forced. You yourself *chose* to be a Tech for 20+ years,
and as such, you have over 99.9% of all amateur spectrum at your disposal.

Oh, absolutely. Simple dislike will work. But you're not the one trying to work "KKK" into Carl's name (i.e., Korporate Kaptain Karl). Am I the only one that notices this sort of crap, or am I the only one that comments on it?

Dick C, wait just a minute! You clowns can come down on anyone who doesn't share your opinion, fine. But when you go into the "KKK," the "welfare mother's of color with their hands out," and "kiss my gleaming white ass," routines, you've crossed the line. It doesn't say much about you as a person. I hope the snows do keep you from the Winterfest. I would be ashamed to attend the same function as you.

4716. OPDX Special Bulletin #386.1

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-07 00:00:00 UTC
From: kb8nw@barf80.nshore.org
Message-ID: <$opdx.386.1.1998@ampr.org>
Source record: 156242
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx,rec.radio.info

SB DX @ WW $OPDX.386.1
OPDX Special Bulletin No. 386.1

The Ohio/Penn Dx PacketCluster
Special DX Bulletin No. 386.1
BID: $OPDX.386.1
December 7, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX
Association, Ohio/Penn PacketCluster Network, Andrew/GI0NWG and
Jeffrey/WA6KBL for the following special DX information.

OOOPPPSSS!!!! (ed. And it wasn't even our mistake this time.) In OPDX.386,
under the heading:

> ZL9CI, AUCKLAND ISLANDS. A press release from Lee, ZL2AL, indicates
> that it there are only 4 weeks to go before the excitement of ZL9CI
> activity begins.

The heading of Auckland Island was incorrect but in fact should have
read Campbell Island. OPDX was informed that the original press release
which was sent out erroneously said Auckland Island. Sorry, we did not
pick up on the mistake.....

OOOOPSSS AGAIN!!! (ed. This time it was my mistake!) In OPDX.386, under
the heading:

> KP2, U.S. VIRGIN ISLAND. Slavek, OK1TN, continues to be active as KP1AD

Slavek's callsign from the U.S. Virgin Island should have read KP2AD not
KP1AD. Sorry for the scare. We are sure many wished it was KP1......

-=-=-=

Many thanks to the hundreds of emails of encouragement and praise for this dxpedition and these bulletins.

The 2 operators on Amsterdam Island have logged more than 16,000 QSOs in their logs so far. The pileups are still huge so they are concentrating on the main bands and modes. They have assembled the WARC antenna on the ground and it will go up in a few days, depending on the winds and weather. They announced that they will not operate on RTTY until at least the 15th Dec. They received my FAX and have been operating more CW and listening above .025 in many cases. They will listen for S. America during the right times. They were heard on 75m phone in California around 1530Z by many many stations but they apparently had high noise levels because they did not hear most of the replies. We will pass the message to them to try to stay on 75m ssb until at least 1545Z for the greyline in N. Calif, Oregon, Washington,and VE7.

The solar propagation will become worse for about a week, so we will advise them to concentrate on 17m and below for this week. The noise level today in N. Calif. prevented contacts on both 10m and 15m.

They have just finished erecting the 17m/12m beam and are on 17m right now. They were S-9+ in EU. The pileup in NA is huge and the deliberate QRM is also terrible. We will be taking actions to cathc these people.

They have announced that they will begin operation on 160m tomorrow, 7 Dec. No idea of the times.

Important: since they have not put up their 30m antenna yet, the person signing their call is clearly a pirate so don't QSL it. Either a bulletin from me or a message from Gil will announce when they begin on 30m.

They ask the DX community to understand that they are on a very small scientific and military base with a fixed meal schedule. They must QRT at about 1400Z or they will not eat. They do not have their own food or any cooking facilities, so please don't criticize them.

For those that asked, there are no recommended or planned frequencies, except for 40m SSB to the N and S America.

They will operate a bit on 6m as well, beginning in a few days.

Please pass along this bulletin to your DX cluster. I was surprised that the ARRL DX bulletin did not have a mention of Amsterdam Isl.

73s, Jeffrey Pawlan, WA6KBL

I'm neither pro nor con the ARRL but I haven't seen too many posts
from them depicting hams as "assholes."

Perhaps boorish Burps depiction of "asshole hams" fits better into
your own views about yourself ?

Cheers :-)

4719. New - Active Beacon Wizard ++

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-07 00:00:00 UTC
From: James Lee Tabor <ku5s@wtrt.net>
Message-ID: <366C569A.B22A9A15@wtrt.net>
Source record: 156245

Seasons Greetings,

For several months we have provided a download able software applet called Active Beacon Wizard ++, or ABW++.

We are please to offer a new version of ABW++, here is a brief description.

ABW++ displays the currently active NCDXF beacon over a topographic map, along with the solar terminator. Tools for setting the system clock, via the net, are also provided.

ABW++ will download and display selected Space Environment Center (SEC) solar reports and forecasts. In addition, ABW++ provides the comprehensive SEC glossary of solar terrestrial terms. This glossary, along with report explanations, is provided in windows-help-file format and may be of use when interpreting the propagation reports and forecasts.

The new version adds 9 more SEC reports (totaling 14) along with an enhanced help file and other improvements.

We realize you are very busy but, if possible, your comments will be appreciated. We think it's a great enhancement to our line of HamTools and a good value. Please don't hesitate to point out any short comings. :-)

Look for the "Active Beacon Wizard ++" link at the URL below.

73 & Good DX,
Jim, KU5S

That, sir, is a fallacy of the type which is generally referred to around
here as a "Morse Myth" ... numerous correct and rigorous mathematical
proofs have been posted here that debunk that idea, as well as the "Morse
gets through when nothing else can."

>That it is also a Legacy mode is also a bonus.

Right, and all that "legacy code" (like 16-bit real mode drivers, for example)
in Windows 95/98 are also a "real bonus." After all, they're usually what
trigger the appearance of "undocumented features" (what MicroSoft usually
calls what the rest of us call "bugs".)

> By your own logic, CW should be fully supported by ARS,

Morse usage IS fully supported by NCI and the vast majority of
those who support the elimination of mandatory Morse tests as
a condition for obtaining higher class licenses. Nobody is trying
to ban Morse, just to recognize that its time as a mandatory mode
and test requirement have long since passed.

How about we make you spend the first year of your next driver's license
renewal pedalling around on a kid's "Hot Wheels" toy? It would strengthen
your legs and your cardiovascular system and you'd have that in reserve
for the rest of you life?

(This is about as rational as forcing Morse on everyone ....)

As long as the medical waiver exists, there won't be much basis for a lawsuit.

Pat, thanks for posting! What passion! What a breath of fresh air.
I got into amateur radio for many reasons. I like the magic of radio. I like
HF. My greatest reason was to contribute to emergency services and SKYWARN.

Kevin, no takers. This is so similar to the existing licensing structure -
the very one that the FCC issued an NPRM in order to simplify it. By the
way, your idea is about 5 days (or 30 years) too late. You should have sent
in your idea to the FCC before 1 Dec like the rest of us did. You still have
time to comment on the proposals of those that did.

Not here! All your doing is taking away the no-code Technician Class calling Tech Plus Class Technician Class and making Advanced Class do 18 wpm. Oh right and disallowing Novice Class from 1.25 meters and 23 centimeters. Where is the improvement to the ARS? Does the improvement come from throwing the Technician Class operators out of the ARS?

Just an aside, if this were implemented could the astronauts who are Technician Class still operate in space because they are >50 kilometers above the earth's surface? I don't think that will stop those Technician Class operators Kevin, better work on that a little more. Is space in ITU jurisdiction? Maybe you could change the ITU rules.

Do not deal with anyone calling himself CHRIS PRINGLE, VE8AA and using a P.O. Box in Crofton, BC

He also has a VE7 callsign, and has taken several of us.

I sent him money for a radio in August, whereupon he disappeared.

Save yourself some grief and don't deal with this individual.

Last used e-mail (now out of service of course) - was:

"Candice and Chris Pringle" katya@gec.net
He also used: orbit@gec.net

We are taking legal action to deal with this person. But be aware. I am told by some of the other victims that this has been going on for a couple of years.

Also known as VE7RPL, CHRISTOPHER PRINGLE.

The guy is bad news, I can tell you. I may have to go up to B.C. personally to get my HF transceiver that I sent him the money for!

His ISP is aware of the situation, as are the Canadian Authorities.

From: radioman@localnet.com
Message-ID: <DkHa2.4667$xQ2.6703@news6.ispnews.com>
Source record: 156297

If this is of topic a bit, I apologize...but i nd some help locating one of these......

I retired due to bad heart and lungs three years back and am looking for one of these radio head units w/microphone.
Anoyone recall these units. I am looking for a Mint or near mint condition head, tan in color with brushed aluminum front panel, with microphone. Front panel has the red light, gren light volume and squelch switch and the P/L switch with mounting bracket if possible. I do not ned the radio nor do I care if it is a VHF or UHF head unit. It will be for display only (hence the need for the mint to near mint condition.
I'm putting together my memorabilia collection and the radio head will make a nice adition to my stuff collected over the years. If you have one laying around gather ing dust and will let it go for a reasonable price, let me know. (If you are a patch collector let me know that too and we could exchange.)

Also, any guys in or originanally from New York state local departments who were members of the PCNY, I collect items with the PCNY logo on them.

Thanks for reading,
Ray Miller,.
Amherst NY PD (Ret.)

>in today's world ...

They're not being used in almost 50% of the QSOs on HF.

>neither is Morse ...

By an informal count any day or night of the week, Morse *is* being used in almost 50% of the QSOs on HF. (Make sure you have a good antenna, though, or you'll miss the thousands of QRP QSOs being conducted.)

>its use is purely recreational
>and there is no need or justification to force all to learn it in order to
>gain totally unrelated privileges.

No one is being *forced*. Look at you - you've been a Tech for 20+ years.

Moonbounce, satellites, meteor scatter, pulse, VEs, VECs, AMTEX, RTTY, FM, ATV, Packet, FAX, SS, compandored SSB, photoconductivity, telemetry, are *all* "purely recreational" in the ARS yet in order to upgrade to Extra, I am learning about each and every topic. I really have no interest in any the above, yet I will voluntarily take the time to become know-ledgable about them. None are "necessary skills" for amateurs.

Your signature speaks of NCI's attempt to bring the ARS into the 21st century - one wonders - what *is* your vision of the ARS in the 21st century? No ragchewing? No SSB? No FM? No CW? No analog comms? Every ham designing and building his own gear? I believe your view is simply no code tests so you can get an automatic upgrade from being a 20+-year Tech.

Tell us what R&D you've conducted in amateur radio, Carl. What new mode(s) do you have on the drawing board? What gear are you operating on the air that you've designed and built yourself? How about putting the rigs and their designs on a web page?

That hams are the only ones using Morse is just fine. It's the only mode in which each and every ham worldwide has the capability to construct a working station and establishing communication. Any other mode will require specialized equipment and knowledge. (Some like to say that FSK is also such a mode, but what will you build to decode it? And how many contacts will you be able to make with it? As of right now, code is the only common mode amongst the world's HF-licensed hams; not every HF ham has SSB or digital, but each knows code.)

Tell us your view of ham radio of the 21st century, Carl. What would you permit and what would you purge?

O really??? You sure have to search long and hard to find any hint of
"broadening"
ham radio in Candid Carl's postings. He's one of the main bangs in the "Engineers
only"
scheme....If you don't Shannon and don't have plans to, Karl is your sworn enema,
evidently becuz he's quite sure that there is not, nor will there ever be, nor
ever should
have been, any other activity in ham radio.

If you see anything else in Korporate Karl's works it's because that's what you
want to
see.

of quaint techniques from the distant past,

Interesting point of order here...the most spectrally effiecient technology in communication on the HF bands IS CW code. That it is also a Legacy mode is also a bonus. By your own logic, CW should be fully supported by ARS, and encouraged in testing.
Nice point.

You sit on one side of the fence and I on the other? Carl demeans and dismisses a large segment of amateur radio on a regular basis. His postings read (to borrow from "Rain Man") like a skit from the comedy team of Abbot and Abbot.

We could tell you, but then we'd have to kill you.

Actually, it is a sort of bootleg operating signal (military uses "Z" signals in addition to "Q" signals, such as QSO -- "ZUT" was not assigned an official meaning, so was hijacked for this use) which was exchanged between Morse operators as a mark of "regard" for their shared affection of brass pounding. Most commonly used in maritime services (USN/USCG), but maybe by a few green-suiters also.

Gary,

Has this cheap and easy to build rig been documented in print anywhere?
I am sure that some would build it and put it on the air if they could
read more about how to do it.

If not, would you be willing to submit it to QST/QEX for consideration?

> the operator's head. And all the technology yet developed cannot match the
> communcation skills of a well trained and experienced operator with a key.

Peter,

I thoroughly enjoy using Morse, but your high-sounding assertions above
just do not hold up in real life.

Here's some information I might want to convey to you:

There is a major gully washer of a rain storm over my house -- thunder like I
never heard before, wind howling in the tower guy wires, the dog is barking
like crazy, and the rain and hail drumming on the roof of the patio sounds
like machine guns firing.

On CW I could send "WX HR AWFUL. RAIN/HAIL/WIND/THUNDER DOG BARKING."

Or on voice I could simply say "Heck of a storm here -- listen to this",
and then give 10 seconds of open mic so you could hear the sounds of the
storm.

By your definition above ("The transfer of information") which "technology"
gives you (the distant listener) a better mental picture of my local weather
--

-- the terse CW or;

-- the "first hand" audio transmission including the excitement in my voice,
and the actual sounds of the storm?

Hey, CW is fun, but for the communication of information/opinion it is
exceedingly primitive, slow, terse, devoid of nuance, and limited in
expressiveness.

73, Hans, K0HB

>
> Dave
>
I forget which post Masataka Noda was responding to, but I'm certain it
was his idea of sarcasm.

I don't think he has read the Usenet Faq's, but his behavior in the local
newsgroup was such that I did post one of them, I think "How to work with
the Usenet Community", in both French and English, in the local newsgroup.
So it can't be said that he's unaware of the FAQ.

Actually, with time it's fascinating to watch him work. He blunders on,
making all kinds of errors (both in contents and how he posts), seemingly
ignoring all the people telling him he's doing things the wrong way. But
with time, he starts going after other people about those same matters,
though it's not often clear that he himself understands what the problem
is.

Months ago he took offense in one of the rec.radio.amateur.* newsgroups
because one of his posts was cancelled. It was automatically cancelled
because he was replying to a Make Money Fast post, and since he quoted the
whole thing, the bots could hardly distinguish it from the real thing. He
took offense, without bothering to track down which post was cancelled.
Recently, he's turned around and done some cancelling in the local
newsgroup. maybe they were legitimate cancels, but for someone who
complained so much at one time, it's hard to grasp that he really does
understand.

What appears to be happening is that he wants to be one of the big boys,
and he sees various people posting a certain way, and so he uses them as
the role model. Unfortunately, the role model he chooses is exactly the
wrong kind. So you actually get a situation which is worse than worst,
because he's badly emulating postings that are bad to start with. But
whereas there are certain people who post a certain way because of the
position they take, Masataka Noda sure appears to simply post a certain
way because others are doing it, not because he is feeling oppressed by a
dramatically different point of view that dominates the threads, or
because he comes across people who really are doing things that need

correction.

We are still waiting for him to do something about his overly long signature, and his overquoting to give a line or two of nonsense reply, and his compulsive cross-posting.

December 11, 1998
Target: rec.radio.amateur.misc, rec.radio.amateur.policy

Welcome to The W8MMQ Wire, for Friday, December 11, 1998. By popular demand, we have decided to continue distribution of this newsletter. This newsletter is a service of W8MMQ and the Radio Society of Central Michigan.

If you have any comments or questions, or would like to be placed on our mailing list, simply contact Dan/W8MMQ at w8mmq@voyager.net. We would be happy to hear from you, and answer any questions that you may have (Please note: if you signed up for our mailing list in the past, you may have to do so again, to ensure that you receive the newsletter).

Please feel free to copy and distribute this newsletter to others, so long as credit is given in some way to W8MMQ and the Radio Society. Thank you!

In this issue: the FCC makes amateur radio a high priority; the ARRL has filed its comments on the "restructuring" proposal; SAREX is 15 years old; upcoming contests and amateur radio events; and much more!

FCC MAKES AMATEUR RADIO A HIGH PRIORITY
Well, the Federal Communications Commission must have heard the "cry" of the amateur radio community. Over the last several years, it would seem that the problem of malicious interference has been increasing, and "ham" radio operators across the country are complaining that the Commission is not doing anything about it.

The Commission has now said that it will give amateur radio more attention, and will work to "clean up" the bands and rid them of those infamous "jammers." On the Commission's apparent lack of interest in the amateur radio service over the last several years, Riley Hollingsworth had this to say to Amateur Radio Newsline, "Some people may call us a dinosaur, but even with a dinosaur -- if you stomp on its tail enough, it will respond."

There is no word yet on which areas of the country the Commission will target first, but there have been rumours that in several major cities, such as Chicago, New York, and Miami, they are considering investigations into malicious interference problems.

Over the last several months, it does appear that the FCC has a renewed interest in enforcing the airwaves, as we have see harsh "crackdowns" on unlicensed low-power FM broadcasters (called "microbroadcasters"). Recently, in several cities, including Miami and Cleveland, the FCC, with the aid of U.S. Marshals, has shut down numerous unlicensed stations.

Several of the operators of these stations have been licensed radio amateurs.

To help the Commission investigate these, and other matters, the Compliance and Information Bureau asks that you call them at 202/418-1184. For more information on the FCC and the Compliance and Information Bureau, you may visit their web site at http://www.fcc.gov/. (Portions from Amateur Radio Newsline, 12/4/98).

THE ARRL FILES ITS "RESTRUCTURING" COMMENTS

Although at the last minute, the American Radio Relay League has filed its comments regarding the FCC's amateur radio license restructuring proposal, designated WT Docket 98-143. The League filed its comments on December 1, the last day of the comment period.

The proposal by the FCC called for major changes in the amateur radio service, specifically the current licensing structure. The League said that the Commission "missed the mark" in its proposal, after failing to "contain a comprehensive license structuring proposal or even an overall review of license restructuring."

In its proposal, the FCC called for the elimination of the Novice class, and merging the current Technician and Technician Plus class licenses. With regards to Morse code, the FCC sought comments on the matter, but offered no solid proposals of its own.

In their comments, the League made mention of their own license restructuring proposal, which they issued some time ago. For complete information on both proposals, and the restructuring "debate", visit http://www.arrl.org/news/restructuring/.

THE W8MMQ WIRE IS BACK!

Many people have written me recently, asking what happened to the newsletter. Many of you enjoyed reading the newsletter, and apparently wanted it to return. Therefore, with the help of several friends, we have decided to bring it back.

One of the reasons I had to quit the newsletter was the amount of time it took to produce it. The newsletter is generally four or more type-written pages long, and took a while to put together. However, with the help of these friends, I feel that I will be able to continue the newsletter, and actually make it better than it was before.

We would love to hear your comments on the newsletter! If you have anything you would like to tell us, or if you would like to contribute something yourself, please feel free to contact Dan/W8MMQ at w8mmq@voyager.net, or contributor Alton Wilson, at alton@excite.co.uk. Thank you!

SAREX IS 15 YEARS OLD

The Shuttle Amateur Radio Experiment, known as SAREX, celebrated its 15th anniverary on November 28. It was on November 28, 1983 that astronaut Owen Garriott, W5FLF, took the first amateur radio station aboard a space vehicle. He was on shuttle mission STS-9, on board the Columbia.

The SAREX program is perhaps best known for its role with youngsters, in schools around the world. The students are allowed to contact the astronauts directly via amateur radio. Numerous times each year, these SAREX missions schedule QSOs with various schools, and allow the students to make these contacts. An amateur radio operator is present when the students operate.

For more information on SAREX, and upcoming SAREX missions, visit their web site at http://www.nasa.gov/sarex/sarex_mainpage.html. The site includes the various shuttles used in the missions, as well as various frequencies used, and more.

UPCOMING EVENTS AND CONTESTS
We have expanded our Upcoming Contest section to include various other amateur radio events as well. If you would like more information on contests and amateur radio "hamfests", visit the following web sites:

ARRL Contest Calendar
http://www.arrl.org/contests/

ARRL Hamfest Calendar
http://www.arrl.org/hamfests.html

On December 12 through December 13, the ARRL 10-meter Contest will be held. For more information, see the November issue of QST, or visit the 10-meter contest rules web site at
http://www.arrl.org/contests/announcements/98/rules-10m.html.

Also, the Great Colorado Snowshoe Run will be held on December 13, from 0300 to 0500-Z. Operate CW mode only, on 40-meters. For more information on the contest, visit the Colorado QRP Club web site at http://www.cqc.org/.

Coming up on December 12, the Columbia Amateur Radio Society in Lake City, Florida will hold its hamfest. For more information, contact Joe Aymond, WD4EOJ, by phone at 904/935-2876, or email at wd4eoj@isgroup.net.

Also on December 12, the Union County Amateur Radio Club, in Union, South Carolina, will hold its hamfest. For more information, contact Roger Gregory, KI4RG, by phone at 864/427-1462, or email at rgregory@carol.net.

AMATEUR RADIO RESOURCE SITE OF THE WEEK
Each week, we feature a different amateur radio web site, which contributes valuable information to the amateur radio community in some way. If you would like us to include a web site you know of, please send it to us. We will review the site, and consider it for an upcoming review.

This week, we feature the N8TNT Dynamite Amateur Radio Page, which has many different links, as well as one of the largest collections of frequencies available on the internet. You will find commercial service frequencies for every county in the state of Michigan, as well as Bob's own lists of repeaters throughout the state.

We highly recommend this web site, which we visit on a regular basis ourselves. You can reach the site at http://qsl.net/n8tnt/. Be sure to

mention to Bob that you found his site through this newsletter!

AND ... IN CLOSING

What a great way to check out! Can you imagine being about 106 years old and going out on a date with a hot 30 year old red head whilst scarfing down about 200 of those viagra pills. It would take the undertaker 6 months to get the smile off your face and another 3 to close the coffin lid. Sign me up.

4764. info on Multi 2000 2m all mode

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-08 00:00:00 UTC
From: Ed Kriston <n3wja@toad.net>
Message-ID: <llkb2.3509$V34.20328807@news-read1.qis.net>
Source record: 156077

I just purchased a 2m all mode radio called a Multi 2000. I got the
original mic and a copy of the owner's manual with it when I purchased it.
The front of the radio has a logo for ITR, operator's manual says Fukuyama
Electronics Co.,LTD and I was told that it was marketed by KLM .
I am interested in finding any technical information (schematics, tech
manual, etc.. Also interested in any modifications for the radio. There
evidently was one modification done to this radio. There is a SPST switch
mounted on one of the cooling holes on the rear of the radio. My suspicion
is that it for selecting LSB or USB.
If you have any information on this radio I will gladly pay whatever charges
for copying. TIA
Ed N3WJA

>lines. Communicator hams and technical hams just can't understand each other
>sometimes. My satire translated: It's ridiculous to require a 5 wpm code
>test since you are almost useless at 5 wpm.

I have to admit to being confused by your "satire" ... based on what I
remember of the tone of your previous postings, I was surprised to
see you "advocating" that all new hams be restricted to Morse only
for a year. I made the mistake of taking you seriously and my
honest reaction was something like "That's the stupidest, most
backward thing I've heard this week."

>The argument that knowing 5 wpm code will save anyone is laughable.

Actually, there is a vanishingly small possibility that it just might once in
an astronomically great while ... but that possibility is SO small that it
simply doesn't make sense to force tens or hundreds of thousands of
people to waste tens of millions of man-hours learning something that
they both have no interest in and have no intention of ever using.

We'd save many orders of magnitude more lives by requiring applicants
for a ham license to become certified in CPR.

> We all want the test to reflect what we're good at, right Carl.

I don't advocate better technical competence *because* I'm
technically competent ... I advocate it *because_it's_important.*

>Now carefully read between the lines on this one
>and don't jump to any fast conclusions...

I waited a couple of hours before responding to this post ... I hope
that's slow enough for you :-)

>
>Without an engineering degree? That would be like me calling myself
>a medical doctor without having earned a medical degree.

Engineers working in the electronics industry are not subject to
licensure like medical doctors ... my employers and peers have
called me an engineer and I've worked in that position for nearly
3 decades.

>>I've been a member of the IEEE for about 15 years now,
>
>All one needs to do is send in their dues. You could also join our
>AMS without a mathematics degree - send in your $175.

Bzzt ... wrong answer! Care to try again??? There are qualifications
for Member grade ... and I had to have two sponsors ... both were
PhDs from Caltech, one who taught at Caltech and the other who
taught at UCLA ... they were also my peers and co-workers when
I was at JPL.

I've been recommended for elevation to Senior Member grade
by my Director of Engineering at work, a Distinguished Member
of Technical Staff (both of the former are Senior Members) and
by a corporate level Director (who's a Fellow of the IEEE as well
as a Bell Labs Fellow). I think that they are far more qualified to
judge my qualifications than you, Jeffy.

>>and I've worked as an engineer (and not entry-level, mind you) for the likes
of
>>Caltech/JPL, Rockwell-Collins, (as a consultant to Hughes, Loral,
Westinghouse,
>>and others) and more recently US Robotics and now Lucent.

>
>Did they check to see whether you had a degree?

They knew I didn't and didn't CARE if I had a degree ... they only cared about WHAT I KNOW and CAN DO. (Unlike the fantasy world of academia, real world employers are usually more interested in competence than how many letters you have tacked after your name.)

>>I've also taught electronics at the college level in California (a credentialed
>>position,
>>teaching one course per semester evenings while working full-time in industry.)
>
>We also have one of those "degree mills" here - they'll hire just about
>anyone from the business community, degree or not, to teach their evening
>business classes. How these private colleges receive accreditation is
>beyond me.

Bzzt ... wrong answer! Care to try again???
Jeff, your ignorance and lack of knowledge of the facts is showing (again, or perhaps I should say "still") ... The college where I taught was not a "degree mill" ... it was a fully-accredited, public, not private, institution, operated by the government.

>You have no education credentials, Carl, so it would be
>impossible for you to have a "credentialed position."

Bzzt ... wrong answer! Care to try again???
Gee, Jeff .. I hate to burst your bubble, but I have this document with an official seal and signatures and all ... the credential was issued by the Credentials Section, Office of the Chancellor, California Community Colleges, Sacramento, CA 95814 ... (it expired in 1991, but I stopped teaching in 1989, to be care for my ill wife who died in 1990, and I left California, so I never pursued renewing it)

If it was any of your business and I really had to justify myself to you, I could send you a copy of it ... but then, neither of those conditions apply ...

>Jeff KH6OO
>P.S. Remember, you started it this time.

Carl
P.S. Yes, and I've finished it, too :-)

I admire your bank account. You will make a nice dent in it if you do
the tribander thing. Get a 2 meter rig, get on the air, have some fun.
You will be making new friends that will "Elmer" you. Spend as little as
possible now. In a year or less you will want somthing other that what
you started with. You will always want that 2 meter rig. We like the
yaesu 2500m around here. $199 new at HRO. Congrats, have fun.

Hans ... yes, I find contesting and chasing wallpaper a waste of
spectrum (for my purposes) ... do I want to actually ban those
pursuits? No.

What I do is comment that those pursuits are NOT the raison d'etre
for the Amateur Radio Service that their more fanatical fans claim
them to be with all of their "it's just a hobby" excuses for the large
numbers of present-day Morse-tested HF-authorized hams who
lack even a modest amount of technical competence.

Hey Jones @ NOMAIL.com (love that address..is it real??
Guess I'll find out! :)...

1) I dont get paid at all by Newsline (in fact I PAY for the
access line here and the tape machine used in the outbound...AND
I PAY for the call to CA to record the weekly newscasts so others
CAN call here and get it..though I have had equipment problems and
when I do get it repaired, its coming out of MY OWN pocket thanks..
NOT Newsline's and NOT yours!)
2) I posted my real name, callsign and location...care to do the same
with yours? (DO you have the guts to do it?)
3) I work in broadcasting as a Chief Engineer for a major BC
company with two FMs in the #7 US market in the top10 of ratings..
I dont need any ego with Newsline.....
In fact, Bill appointed me that title 2 years ago when I moved
here...WHY?? Because I have been a Newsline/Westlink
station since 1977....want to pay MY phone bill??? I didnt think
so.....NO I dont agree with Bill 100% on all issues...and one of the
reporters used on Newsline I could care less about....she and I
have PERSONAL disagreements....but that is not Newsline's problem..
yet I dont bitch about it.....

Now, you want to contribute? fine...you dont???? I DONT CARE....
and really noone else does....

Carl, I would bet that far more "technically competent" by your definition are CW guys rather than the digital and SSB crowd. The CW guys actually know what an oscillator is, as compared to the appliance operators. If I want to speak to someone orally, I have tons of friends I could go visit, if I want to talk digitally, I have email and news groups, but for me and I bet a larger majority then you think, the radio is my escape to pound the brass a bit. I am not doubting your ability to build a 5 volt DSP digital wonder, in fact I bet you could design and build one better than most PhDs. But come on, where are you getting this pompous attitude about what is and is not competent in the technical world. Wouldn't you agree that the mark of a radio person ought to be ingenuity rather than complexity. I would be more impressed by a 12 year old kid's crystal oscillator, one transistor amplifier, and direct conversion RX setup (which was formerly an old television or broadcast radio), then $2000 dropped into a state of the art SSB/DIGITAL rig design that is nothing more than a 1990's version of a CB or wireless Internet. The kid would be more competent in my book, because he knew what he wanted to do, may do with what he had (keeping a good tight budget), and what he didn't understand, he taught himself by releasing the secret smoke out of a few transistors. I can almost guarantee that a larger amount of CW equipment was homebrewed than SSB or Digital. Wouldn't this make the CW crowd more tachnically competent by your psuedo-standards?

73s (or should I say "10-4 Good Buddy" for the "Technically Competent" by Carl's Standard)

You, Cecil and Carl are three peas in a pod. You are all engineering technical types and seem to enjoy the display of your vast technical knowledge. However you're high tech anti CW diatribe belongs in an electronics engineering newsgroup. This is a ham newsgroup...a *hobby newsgroup*. I could say what I think you said in one sentence: There are more efficient ways to communicate than CW. But this isn't NASA, so efficiency is not a necessity. CW is fun. Most people who use it, use it only for that reason. In fact most of ham radio is for fun. That's why most people engage in any hobby. CW is like an antique car. Both have tradition, simplicity, and sometimes are more reliable than modern day equivalents. You can work on it with simple tools and minimum knowledge. I hope that a part of ham radio will always be available for us buggy whip makers...

I built the Ramsey 2M kit a couple years ago. Works OK for a
simple rig. The feeling you get when it works is quite fantastic.
I could kerchunk a repeater, but didn't get anyone to get back
to me. I had thrown in a 'dip switch' just to set frequency easily
while I jack around, and started flipping through frequecies.
I tried 52 and it was dead, then went to switch to something
else, and got someone by accident. Once I figured out what
the frequency was (it was wierd simplex) I called out and the
guys came back to me. Turned out he had a HUGE beam,
and was trying to work someone about 15 miles from me. He
was over 60 miles away. Anyway, the three of us chatted for
about an hour, a lot about the kit.

Normal contacts aren't that much fun.

I was active duty USCG (RM1) from 1964 to 1968. I always enjoyed the issues of ZUT-REP which came out way. I still have an issue or two around somewhere in the attic, along with a copy of the "spoof" which was published in 1965. It's cover shows a wind-bent radio tower, and the motto (instead of What Hath God Wrought?" is "What Hath Radio Come To?".

One article says that the ZUT speed keys arrived, but cannot be distributed. Unfortunately, all units were received IN PERFECT ADJUSTMENT. They will have shipped back to the manufacturer to be modified for CG use!

On another page, the magazine reprints (for the benefit of many operators) the entire Morse Code and encourages ops to keep it handy for reference HI HI.

73 and dit dit,
K5PF

(Former NOY, 4YV, CGRADSTA Galv, and USCGC Bering Strait, with temp duty at Groton and NMG, plus a decade at KLC/Galv after discharge).

Spectrally efficient? In the real world, more bandwidth means the ability to send more information. Overhead imagery, for example, uses a lot of bandwidth and portrays a lot of information relatively efficiently. How much morse code is required to describe a 10X10 mile section of land to six inch resolution.

Morse code sends a little information in a narrow bandwidth. By modern information system standards, it is obsolete and inefficient. I have worked for 20 years on a variety of military C3I systems, none of which use Morse code.

My opinion is that a portion of each band be reserved for CW, but that various licenses be based on tests of theory and operation, with no code requirement.

Wrongo again, Squiggy. The failure rate is (was for the entire 8 years I served as a VE)static at near one third. Two thirds of all applicants pass. And that includes all elements,
all exams. Some applicants take-and fail- multiple elements each session. Many are clearly not at all prepared, easy as it might be, but take tests on the chance they will
"get one I can pass". What's remarkable is that the pass rate is so high under the circumstances.

4795. Spectral Efficiency: CW vs Mike Tyson

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-08 00:00:00 UTC
From: petermaus@aol.com
Message-ID: <19981208010420.15964.00001717@ng-fr1.aol.com>
Source record: 156173

I realize that this is an exercise in futility. Those opposed to the use of CW are opposed and invincibly so. But as long as the issue of spectal efficiency has been raised and challenged....well here's the point. Sending a graphic, a map, a photo by CW is, yes, horribly inefficient. Spectrally frugal, but foolishly wasteful in every other regard. This scenario is also patently absurd. No one would attempt such idiocy, so THAT argument, as expressed here, is nonsense designed to win an argument by derailing it.

The issue is communication. The transfer of information, ideas, or opinion. And in that regard, the argument takes on a whole different meaning. You wish to send audio, you wish to send text, SSTV, its all the same: More bandwidth, more technology for greater detail,--true-- for reader friendliness--true--but more information? If you include, in digital modes, formatting, control bits, and templates in addition to text, certainly more information. But as far as efficiency of communication....? Not so.

Long standing communications practices between CW operators have involved formal and informal shorthand. The Q codes come to mind, and for the purposes of this discussion, will make the point quite nicely. With no more than three characters, a practiced brass pounder, can ask a direct question. With the same three letters, the corresponding operator will begin a resonse, that defines and formats the information to follow. All in a space a few hertz, or tens of hertz wide, depending on rate.
All the templating, all the formatting is contained in the heads of the operators on each end, and the technology need be no more sophisticated than two wires tapped together to conduct this communication.

For those that wish to step into the 21st century with no history, only a future, armed with technology, this is anathema of course. CW is, by comparison, a dog sled in an Arctic Cat world. And in reality, it IS an archaic mode of communication. But when the going is tough, the weather is freezing and technology fails you, you'd much rather have had the dog sled, and the training and experience to use it. By the same token when it comes to communication, when the reception is tough, the bands are crowded, you have to get the message through, and technology fails you, and it WILL fail you, CW is not only the best way to get through, it may be the ONLY way to get through. And between two experienced operators, the most efficient mode, spectrally, and in terms of content, is CW.

Like I said at the outset, I expect the invincibly opposed to deny this point, and argue baud rates vs bandwidth. But that's technology. Communication is what happens AFTER the signal is passed. Its what happens in the operator's head. And all the technology yet developed cannot match the communcation skills of a well trained and experienced operator with a key.

Your "joke" about the naked lady and the call letter hat. You're
hardly known for the "good things" you say about hams or amateur radio
in general.

>a sailboat to carry cargo, or to fish, or to cross the oceans.

That's just not true. Naval architects are producing sail-assisted designs to ease fuel consumption. And a fair amount of cargo shipped between islands of the South Pacific nations is done under sail. Medical ships servicing those islands also use sail propulsion.

>Yet many people still choose to use it for pleasure. If Morse code tests
>were dropped, people would still use Morse for pleasure.

That's true, but you will have broken the link of commonality amongst all the world's HF licensed hams. As communicators, first and foremost, we should all, the world over, have at least one mode in common. Right now CW is the only one. If one chooses to be insular and not care about such a common link with all the hams of the world, they should remain on V/UHF.

I second that. There's a group of folks in your country that have a whole lot of fun with amateur radio and with building, the G-QRP Club. I heartily recommend you get in touch with them. Start with George, G3RJV. His email address is g3rvj@gqrp.demon.co.uk, telephone 01706-31812. He's located in Rochdale, near Manchester.

The G-QRP Club actually has members all over the world, and its excellent magazine, Sprat, is always full of good projects of all levels of complexity. I highly recommend it to anyone interested in QRP, building, or both.

Roy Lewallen, W7EL

Hi everyone,
Thank god I just passed my tech exam and I am looking to purchase the best Tri band radio out there for 2 meters 440 and 22O. Can anyone offer me some good advice in reference to brands and where to order from Someone said Lentini but I really could use some good opinions on models etc I am located in Upstate NY
Many thanks Looking forward to the Hobby

So you admit to being a clown? All of your "family amateur radio service"
and "lazy no-coder whaa whaa whaa" name calling doesn't approach the racist
crap we get from some of these clowns. Don't be so sensitive Mike.

Jim, funny, but not fair. While Mike's eyes roll back every once in awhile, and he goes in to the "all no-coders are lazy" and so forth, he doesn't drop down into the racial gutter that I can recall. Either he admits to being a clown, or he secretly agrees with the racial card that keeps getting dealt, and his response was a freudian slip.

Over the Thanksgiving week-end, I was talking to another ham
on 2M, and he mentioned the name of a radio store in Nashville. It
sounded like a parts/old radio store, and in started with a J.
Unfortunately I didn't have pen and paper handy to write it down.
Anyone know the name of the store?

TIA

Pete.

That would be Javanco, near the corner of 12th and Division.
Phone number is (615) 244-4444

No ham stuff, but very good prices on components, etc.
Shop there for all stuff I use when rebuilding older gear,
such as buying new caps, etc.

My hat goes off to KH6OO, CW is absolutely a needed requirement in todays Amateur Radio.
When all else fails, CW will be there, and if we dont know the code it will be useless. Lets not let this happen. Amateur Radio must always be ready and able in any kind of circumstances.

Funny, with all the generalized slurs and innuendo against those on my
side of the fence, I must have missed which 'clowns' your message
specifically referred to.

Even so, once again this posting puts words into my mouth which I have
never stated. I have never stated that 'all no-coders are lazy'. Well, at
least not in a serious post -- I might have needled Mark Morgan into a
frenzy of random thrashings at his keyboard attempting to form a coherent
sentence -- but that was for entertainment value only. I *have* made
comments about ham radio being transformed into a family radio service --
something I think we should all be concerned about, because if the FCC
ever determines that the primary faocus of ham radio could be handled by
another service, they might just go off and eliminate ours.

Actually, the two sided PSD (power spectral density) is 132 Hz
when CCIR shaping is used. In other words, keying rise and fall
times set the bandwidth for CW at speeds below 60 WPM. But I
can do 24 WPM in a 28 Hz two sided PSD using simple MSK.
I can knock that down to 6.33 Hz with symbol overloading and
a Markov distribution using my I/Q homebrew rig. It can operate
at an Eb/No of 6 db, you need an Eb/No of greater than 13 db to
do 20 WPM Morse (ie at least 5 times more signal power, and
more than 21 times more occupied bandwidth).

(Eb/No is (P*T)/(No*B) where P is received signal power, T is
symbol duration, No is the noise power spectral density (watts/Hz),
and B is the single sided PSD of the modulated symbol stream. It is
the communications industry standard measure of communications
system performance in noise.)

>>as well as the "Morse gets through when nothing else can."
>
>Morse gets through when nothing else, that hams normally utilize, can.

Which only tells us that many hams are operating more than 50 years
behind modern practice. That has been the point of most of Carl's diatribes.
A rig such as mine is easy and cheap to build (easier and cheaper than
most ham homebrew CW rigs, receiver and transmitter). But many hams
keep regurgitating the past with yet another MOPA instead of taking a small
step toward a more modern technique.

There's no wonder hams are often classed with buggy whip makers these
days. Many are operating so far behind the SOTA as to be ludicrous. We
can't blame them for that, however, because they've been inundated by
the Morse Myths for so long that most believe them. Few have even heard
of better methods, and of those who have heard of those methods, many
think that implementing them is too expensive and too complex for an amateur

to do. That may have even been true in 1960, but it certainly isn't true in 1998.
The difference is cheap VLSI.

4820. Need Web Cam Monitor SW

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-08 00:00:00 UTC
From: p06288@email.mot.com
Message-ID: <74jlm6$5bm5@nntp.cig.mot.com>
Source record: 156198

I would like to mount a Web cam on top of an antenna site to monitor activity around the site. can anyone tell me where to find some software that will watch the video and when it detects a change, send a msg to me and capture the video every sec or so?
Thanks in advance
Jim

4821. New Internet radio channel for hams, dishheads, etc

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-08 00:00:00 UTC
From: dishey@hotmail.com
Message-ID: <74js9c$9gm$1@nnrp1.dejanews.com>
Source record: 156199

Jim Bass and LETS TALK RADIO return December 20th/21st on WBCQ
worldwide shortwave and the Internet via live streaming audio.

Program: "Jim Bass is Back with Lets Talk Radio."

Service: Lets Talk Radio, a non-profit venture.

Distribution: WBCQ shortwave 7415 khZ, Internet audio
via Radiomall at

1) http://www.radiomall.com/ram/letstalkradio.ram (RadioMall)
2) http://www.letstalkradio.org (Lets Talk Radio)
3) http://web2.airmail.net/~fkenn (Frank Kennedy's TVRO WebSite)
4) http://www.fnl.net (FNL - The Unofficial Site)

Satellite distribution: C-band location to be announced.

Date of first broadcast: December 20th/21st.

Time: 0500-0800 GMT (Monday), Midnight to 3AM U.S. (Monday),
9PM to Midnight Pacific U.S. (Sunday)

Format: Talk show, call-ins, conversations, interviews, and monoloques.

Call-in format: conventional voice telephone and Vocaltec's Internet Phone.

Topics: Internet audio, shortwave, ham radio, radio collectables, nostalgia,
domestic and foreign satellite communications, TVRO, DSS, MPEG2, and 4DTV.

Background: Jim Bass, who some of you know as the founder of Lets Talk Radio,
which was on Spacenet 3 in 1991-1992, and the QSO Amateur Radio video
programming uplinked on Spacenet 1 in 1991, will be bringing back Lets
Talk Radio to C-band, shortwave, and Internet streaming RealAudio.

Radiomall's RealAudio distribution means a nearly unlimited number of
audio streams for Internet listening, 24 hours a day, 7 days a week!

Vocaltec is working in cooperation with us. We will have dedicated server
access and our own 'Iphone Room'.

More focus will be made toward small dish users than in past TVRO talk
programs. What with the Internet involved the need for a big dish to be part
of the forum is unnecessary.

Once again, Lets Talk Radio is a NON-PROFIT venture.

Audio Tests:

LTR Internet RealAudio TESTS are underway at

1) http://www.radiomall.com/ram/letstalkradio.ram (RadioMall)
2) http://www.letstalkradio.org (Lets Talk Radio)
3) http://web2.airmail.net/~fkenn (Frank Kennedy's TVRO WebSite)
4) http://www.fnl.net (FNL - The Unofficial Site)

Delphi Forums: Lets Talk Radio at
http://forums.delphi.com/m/main.asp?sigdir=ltr

IRC Chat Areas: Dalnet's #letstalkradio

Mailing list: To be announced.

E-mail: jim@letstalkradio.org

LETS TALK RADIO is looking for PROGRAMS to BROADCAST.

Do you have a show that fits within the broad range of interests Lets
Talk Radio is programming for?

Audio cassette submission address to demo your show:

Steve Livingston
2313 Baron Drive
Muncie, IN 47304

Rules for submission:

1) No profanity or hate mongering.
2) No infommercials or programs advocating a commercial product.
3) Keep it legal.
4) Keep it within the range of interests defined by LTR.
5) We keep the cassettes unless return postage is supplied.

>should all, the world over, have at least one mode in common. Right now
>CW is the only one. If one chooses to be insular and not care about
>such a common link with all the hams of the world, they should remain
>on V/UHF.

I might believe that if there was some reason to believe that all HF-licenced hams actually *were* able to use CW at some standard. But the ARRL's own survey of its members shows that most HF-licenced hams seldom or never use CW. How many of them do you think could actually do something useful with it if called upon?

If you think everyone needs to know Morse code, then why not push for periodic retesting? Why not require people to demonstrate *sending* as well as receiving? Why isn't it as important on VHF or UHF as it is at HF? (But if you do this, prepare for screams from existing licensees).

Besides, I simply don't buy the argument that all hams must be prepared to use CW for long-distance HF communications. There are other services that operate long-distance or world-wide communications networks. Do any of them use CW? Not that I know of, any more. If everyone else has abandoned CW, why is it still so valuable to hams? Clearly, not all hams think so, and there are good technical arguments why CW is poorer than several other modes. But neither side seems to accept the other side's arguments.

The real question is: How long with the hams who honestly believe that Morse testing is a good idea continue to get their way, while there is a large group of other hams who honestly believe that Morse testing is either irrelevant or downright bad for the service?

Jeffrey Herman wrote:

> >My next question is what is 'motorboating'?
>
> Similar to "picket-fencing"?

Picket-fencing is a rapid "fluttering" of an RF signal.

Motorboating is a low frequency audio oscillation.

They are very different conditions, and not similar at all.

> >While I'm at it, I've gotten some conflicting definitions

Cherry red plates are caused by high Ip, not high B+.

Maybe because you ignore Carl's language in which he specifically *excludes*
DXers and contesters. (As in "not to get a postcard from some rare
country or see their name in the contest scores of QST...") How does such
exclusion "broaden the circle a little"?

As usual, you're wrong. An Extra examinee can miss at most ten questions
and receive a passing score. There are easily eleven topics in the Extra
syllabus which do not hold my interest (I've listed 16 of them in my
paragraph above). In your words, I'm being "forced" to learn material
which is "a waste of my time," yet I will comply in order to upgrade,
otherwise I will fail the exam. I too am not afforded any option, but
realize, unlike you, that exams cannot be tailored to my personal
interests. Like the Morse test, the written is "pass/fail" but one must
receive a higher score on the written (75%) than on the Morse test
(70% on the multiple choice, or 20% on the five minute version).

Gee, just a 20% score (one minute out of five) to pass the Morse exam,
Carl. Your complaints are really baseless, and you've wasted 20+ years
complaining - an upgrade to General would have only taken you one month
or less of study.

>>Your signature speaks of NCI's attempt to bring the ARS into the 21st

>else ...

Contests utilize less than 29% of the week. That means you and you tiny
minority can play with your exotic modes 71% of the week. On 30m we'll
give you the entire week to yourselves.

>The idea that Morse might have to compete on a level playing field with
>more modern technologies scares the living crap out of your, doesn't it
>Jeff?

Not at all. At least I can say that the mode I operate on HF utilizes
gear I built from scratch, and that I can decode that mode using my
given mental abilities rather than having to depend upon a machine.
You'll never be able to make that claim. (Built a monitor lately? ;)

Home school is becoming more popular because parents are fed up with the
public schools. They're tired of their children being used as guinea pigs for
social experiments. Outcome based education is the latest trend that the
gurus who sit high upon the thrones of political correctness are trying to
force down our throats.

4837. 1933 Hammerlund Comet for Trade

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-09 00:00:00 UTC
From: arc5@ix.netcom.com
Message-ID: <74mhm4iie1@nnrp1.dejanews.com>
Source record: 156013
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

I have a very nice condition 1933 Hammarlund Comet
WITH THE COMPLETE PLUG-IN COIL SET IN ITS BOX
and an original manual.
It looks like a T/R switch has been added
(neatly), but I'm not an expert on these sets.
Very clean paint with few flaws.
Was kept in a house.
Looks like you could recap it and turn it on.

Will trade for good-condition, unmodified
rare "ARC-5" type Command sets, like:
AN/ARC-5 T-15 transmitter, covering 500-1300 KC.
AN/ARC-5 T-89 transmitter, coving 100-125 MC.
AN/ARC-5 T-90 transmitter, covering 125-150 MC.
AN/ARC-5 R-112 receiver covering 100-125 MC.
AN/ARC-5 R-113 receiver covering 125-150 MC.
8th-Air Force modified BC-455 (20-48 MC).
RAT and RAV receivers and/or groups of accessories.
Sets factory-marked in Cyrillic (Russian).
Authenticatable factory prototypes.

Others considered.
Trade depends on rarity and condition.
(Not interested in T-23 or R-28).

I already own multiples of more "common" sets
and have no interest in large lots of them.

Please note:
***The radio and/or coils are absolutely
not for cash sale
and offers to buy for cash will be
deleted without response.***

***I am not interested in trading for
anything other then that listed above.
Offers of other trades will be
deleted without response.***

I had the same problem with Win 95. Not sure exactly what the problem was
but it went away on it's own (I know that's not much help). Maybe I changed
a driver or something.

I did find that if I downloaded the data FROM the 50 before trying to send
TO it, it worked but if I just tried to send first it didn't.

Hope this helps some.

For information you should contact:

Bahamas Telecommunications Corporation (BATELCO)
P. O. Box N-3048
Nassau, Bahamas

For accommodations, consider Orange Hill. Family atmosphere. Near
Nassau airport. Ham radio friendly. Get a room to the rear to string up
a wire.

> almost a block and emitting such a low signal that I can't even detect?

LKOJ-

I think the 9100 is the one I have. It is a digital phone, but NOT spread spectrum. I found that I could pick it up on a cheap counter that goes beyond 1000 MHz. As I recall, it has several frequency pairs that can be stepped-through.

No doubt your attempts to detect the signal were with instruments having no useable response at 900 MHz. After counting the frequency, I attempted to receive it on a Tandy Pro-2006 scanner. I wasn't able to detect it. I suspect the modulation spectrum is so close to white noise as to sound like an open squelch on an empty channel. I was able to receive another analog phone, which used the same frequency pairs as the 9100.

If you succeed at extending the range, you may run into similar problems found with the old 47 MHz analog phones. If you make it work at a greater distance, you increase the probability that another phone will be within its range. You may not be able to hear the other phone due to the digital coding, but the channel can be blocked. As population density increases, more channels might be blocked by other phones.

That's certainly an opinion. I think that it is unlikely to be true, given Carl's definition of "technically competent". You also seem to be equating digital, ssb, and appliance operators as somehow distinct from CW operators, when in fact it is rather common for CW ops to also be appliance operators.

Radio is my escape to learn about electronics, build things that (hopefully) work, and meshes with my interest in digital communications. Nothing wrong with us having separate interests, but the simple fact of the matter is that your activity is preferentially treated by both the regulations and organizations of amateur radio.

> I am not doubting your ability to build a 5 volt DSP digital wonder,

Precisely! What many hams fail to realize is that digital techniques are no more "complex" than any other aspect of amateur radio. Indeed, the availability of cheap computational hardware _enables_ large amounts of ingenuity to be applied to the design and implementation of radio hardware.

> make the CW crowd more tachnically competent by your psuedo-standards?

No, not at all.

Is it fun to build crystal radios, and old regens and simple one transistor radios? You bet! I've build a few, and helped kids build a few more. It's a blast, and it does teach kids something about radio and electronics. But in fact, not a single kid has every understood at any real level how these things work. Why does an oscillator oscillate? What does a tuned circuit do? How do transistor amplifiers work? How does the diode detect the AM signal? Why is a ground necessary? Sure, they soldered some things together, wound some coils, mashed some Fahnstock clips, and had a great time. They even got the thrill of listening to radio signals. All of this is quite different from having any real technical competency.

Far too many licensed amateurs never get beyond this level. Sure, they can put up an antenna, or assemble kits, but they actually have a remarkably poor understanding of both the theory of what happens in a radio and the good engineering practices that allow them to design, debug and repair radio equipment.

I apologize to everyone. I have had feedback that I am being to vague in one form or another. Cross-stitch is a form of needlework where the design is made using x's. The designs I have made include a pattern of the international morse code, schematic designs, and just about anything else that I can think of that pertains to amateur radio. Alot of the stuff I have made for my husband has been personalized with things like his call sign and 10-10 number. I hope this helps.

This is good news - maybe. I have often thought the 202 was one of
the best products the shack ever released. I understand it was based
on a Icom design and built by Maxon for Tandy. I wonder/hope if the
new models will live up to the cost - excellence ratio of their
predecessor.

> me around the house. :-))

It is clear that your defense of the ARRL is not without bias. They
pay your salary and in a sense provide for the welfare of your
family. There is nothing wrong with this of course and in your place
I too would be very careful about what I say about my paycheck
writer. Let me ask you a very simple question Ed. If possible a
simple yes or no would be great.....
Are the directors and paid staff of the ARRL very strongly motivated
to increase the subscription base of the QST magazine????

If I may be permitted I would also like to make a brief comment.
Questions about my "suspicious" nature have surfaced and fairly so.
My friends say that I have a prudent nature and those who dislike me
would say I have a suspicious nature. In truth I suspect the two are
not all that far apart. To a certain extent I am a product of my
environment and my society. With the way the world is today I feel
that caution is a reasonable course to steer. There are to many
shoals and reefs in this world.
If I were going to make a generous contribution (say 25 million) to
the ARRL or ANY lobby such as yours or even ANY charity, I would
first have the the staff and the financial affairs thoroughly
investigated by a very competent private investigation service. I
most certainly would not rely on a "Public Report" as prima fascia
evidence of fiscal propriety. To do so would be not only foolish,
but even reckless. John D. Rockefeller said that it is as difficult
to wisely contribute a dollar as it is to earn one. I would
strongly agree with this statement.

de .... N1MSV a member in good standing of the ARRL

4879. A Modest Proposal

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-09 00:00:00 UTC
From: n3xbu@aol.com
Message-ID: <19981208200114.00460.00003759@ng118.aol.com>
Source record: 156096

Caveat: This is a joke. If you are humor impaired, please do not read further. Please do not email me with lame complaints of unfairness to CBers.

I have my own Ten Point plan for restructuring the Ham Bands. I call it:
A Modest Proposal by K3VR (copyright December 1998)

1. The code is obsolete and difficult to learn, therefore a code requirement is unnecessary.
2. Radio communications per se have been superseded by the cellular telephone and the Internet, therefore; knowledge of basic theory is unnecessary.
3. Homebrewing and experimenting is practiced by few hams; perhaps less than ten percent by some estimates. Accidents happen around high voltage, therefore all equipment will be purchased new, effective immediately.
4. Average emergency teams are well equipped with communications equipment purchased by taxpayers and able to handle rescues on their own; therefore ARES and RACES are unnecessary and hams should avoid interference with ongoing operations.
5. "Net" operations are inherently boring and unnecessary
6. The so called "HF bands" are full of deliberate QRM, music broadcasting, pirate operators, foul language, and loudmouthed drunks. They are an embarrassment to ham radio; therefore all HF operations will cease, effective immediately.
7. VHF and UHF spectrum is valuable, and will be appropriated by the Federal Government and auctioned to the highest bidder, as befitting a precious national resource.
8. Effective immediately, all so-called Ham equipment will be turned in at the Local Communications Depository, for use by appropriate professional authorities in case of National Emergency.
9. Those found to be in noncompliance with the new regulations will be fined, and/or imprisoned, or both, as outlined in the newly defined manual of Firearms, Alcohol, Radio, Tobacco, Sex (FARTS) bill as amended in paragraph B. of the definition of the expanded role of the IRS.
10. Anyone still wishing to communicate by means of Radio Frequencies will be confined to the spectrum between 26.965 and 27.405, in future to be referred to as the QRP, NO-BRAIN, NO-CODE, NO-TECH BAND where others ignorant of the difference between standing waves and standing in the rain, and the rest of the illegitimate children of first cousins now operate, confining themselves to 5 watts output, equipment made by Radio Shack and A.M. operation, with simple vertical antennas at modest heights, which will be considered acceptable as long as neighbors don't complain, and no interference of any kind is produced at any time.

Some time ago, ten or so years ago, a fairly new amateur asked me much the same question.
I answered him by suggesting that he put away his vhf radios and go back to operation hf for a little while. The when he got back to hf for a few months he could pull out his vhf radios but to put more emphasis on hf then vhf.
In my opinion, you can learn more about the 'essance' of amateur radio on hf than you can on vhf.

No, he doesn't want to give it to the masses. He wants to reserve as his own private playground for technofreaks and wireheads, creating whole new class of social outcasts. As Pete Townsend wrote, "Meet the new boss. Same as the old boss."

>it's 73 minus a couple of dits.
>
>

I wondered if that's what was meant. However, that is stretching the point. A couple of dits is a BIG difference.

However, here is a real-life situation where spacing means everything:

Big CW station in Florida: WAX
Small CW station in E. Texas: WPA

WAX * - - * - - * * -
WPA * _ _ * _ _ * * _

Move one space and you get the same signal in CW. There was a time when WPA used to jump the traffic of WAX. It caused a lot of friction. Finally, they came to a "cattlemen's agreement" to stop the practice and 500 KHz settled back to normal.......

>We'd save many orders of magnitude more lives by requiring applicants
>for a ham license to become certified in CPR.

Actually we could save even more lives by eliminating all testing. Think of all the communicator hams that would bring into the hobby, who would be available for any emergency. There would be a ham with HT on every corner just waiting to serve. Yes I agree, ridiculous. I think that saving lives, while laudable, should not be a testing criteria.

>I don't advocate better technical competence *because* I'm
>technically competent ... I advocate it *because_it's_important.*
>Carl - wa6vse

Important to who? Not to me. I'm retired and enjoy being stuck in the 50/60's technology. I will never be in the electronics business. Why should I study new technology unless I want to? Same as the forced code test thing, right? I'm sure there are many people out there like me who would like to be hams. They can learn how to operate today's rigs safely in a couple hours. Why should they be forced to be an engineer any more that you should be forced to use the code?

In reality the ham test is really a weeder to keep the successful applicants to a minimum number. The proposed 5 wpm code test while almost useless on the air, does the weeder job. I'm sure it will go away in a couple of years anyway so you won't have much longer to wait. The present electronics multiple guess with answers given also requires some work so it helps weed also. It certainly doesn't give any electronics knowledge so it's as worthless as the code test for any personal betterment. Only the regulations part of the test makes any real sense.

If there is a very simple test or no test then we have CB. Too hard a test and the hobby dies from lack of people and thus political power. Coming up with a test that doesn't open the floodgates but still makes sense, therein lies the problem. I doubt the changes coming up will do that.....

... many of us just recognize how badly Morse testing and other outdated, backward restrictions have hurt/are hurting ham radio. We want to see ham radio rejuvenated so that it stands a chance of surviving for grandchildren (and theirs), rather than being dropped
>>

I fail to see how dropping the CW requirement will *rejuvenate* ham radio, given what is available WITHOUT having to know any CW at all.

Let me paint a picture here. The driving distance between New York City and Los Angeles (according to my AAA North American Road Atlas) is 2787 miles. If we were to take that as all the bandwidth that hams now have WITHOUT KNOWING ANY CW, then dropping CW would give then almost an extra 1/2 mile.

I don't take email. I tried to make the address so that any intelligent person would realize it's not real.

>2) I posted my real name, callsign and location...care to do the same
>with yours? (DO you have the guts to do it?)

Nope. I avoid people who make threats (like you) and other unpleasent things that happen here on usenet by remaining anonymous.

>Now, you want to contribute? fine...you dont???? I DONT CARE....
>and really noone else does....

No. Although I do occasionally read the website, most if not all of the information is found elsewhere. I would not miss it if it disappeared.

BTW all your personal information was interesting but neither I or the original poster asked for it. He wanted to know why all the begging for money? I don't even care about that. I commented on your threats, very unhamlike although par for the course here on usenet. Also I got a chuckle out of your bureau chief puffery, like Newsline was the New York Times or something....

He ain't got nothing better to do between times QRM'ing 14.313 and 3894.5

What a living hell these grumpy old farts must live in! Wake up, QRM all day,
QRM till 11:00, eat, sleep - wake up etc... a cycle

> tendered revenues.

Yes, it is a very small circle. It consists of all those people who read
the ARRL Annual Report, available to members for the asking.

Of course, if I spoke only French, your message becomes 2 seconds of forign language followed by 10 seconds of strange static (zero information transfer). CW is not just another data compression device, but ANOTHER LANGUAGE and a simplified one at that giving millions of people the ability to speak to each other with very little effort.

If you sent me a message in French, either in Morse or a voice mode, I wouldn't have a clue what you were talking about.

Easier said than done. Many are limited as to what they can put up in regards
to HF antennas. After listening for awhile, they'd probably be bored with HF
anyway.

Look what happened when they dropped the standards in our schools. Today were seeing more and more of what the next generation is going to be like.
Reading and writing, who needs to know that, arithmatic,dont need that, for what ?Its all the same thing. Do you know that most of the youngsters today cant even read a simple news paper artical, never mind a license manual. How are they going to use Morse Code ? Yea, we better do away with that code stuff so that more youngsters can get into Ham Radio in the future.
The last time I went to a radio club I was surprised as to how many of the youngsters were unable cope with learing the code. Its frightning that they are not only unwilling, but unable.

The reply as to the open mic is true. There is no substitute for the sound of the human voice and other living sounds. True CW can not duplicate that. However without the microphone your done. Forty Three years of CW, it has become second nature to me at any speed. I still enjoy SSB just as much for that reason. Point well said. If we could only add live TV with our audio, boy that would be the living end on the HF bands.

4928. It was "Drunk Night" on 3.901

If you missed listening to 3.901 LSB last night (12/8/98) then you missed
Drunken Ham Op Guest Night". Our good friend Walter w2yee was
in there and boy oh boy was he SMASHED!! Yes sir! With blubbering
and slurred speech, conversations carried on with non-existent people, random
usage of Anglo-Saxon phrases describing both natural and un-natural acts of
sexuality between differing and like sexes, jew bashing and more. Did not hear
if Uncle Waltie played his trademark Nazi Marching Music but he was still
going at full 200 proof steam around 10:30 C.S.T. Oh well mabey next time
after Walt recovers from his hangover. (This was the *most* juiced performance
I've heard yet. If you didn't catch it last night, you truly missed quite a show)

>
> Just another night on 3950Khz...THE NIGHTTIME ZOO of Amateur Radio!

That person who was talking about the finer points of
"watersports" was Bobbie Serrett K5ZU (ex-AB5MV)
His nickname is "Monkey Vomit", selected from his
old callsign suffix. He changed it for that reason but
still called "M.V." and it drives him nuts. He is an
ex-boxer (really - no joke) who fought in the Chicago
area in the late 50's & early 60's. This was confirmed
by KC3AU (a ham-radio preacher who drones on and
on, used to on 14.313 - he's now in Ga and will be back
on the air in Jan.) who knows him personally. Again, this
has been confirmed. It seems that the years of having
punches taken at his sloped forehead and body have taken
their toll, and now ole Bobbie is showing signs of all those
years in the boxing ring, just like Mohammaed Ali is now.
Both of them have Jell-O for brains - literally and figurativly.
So enjoy ole K5ZU (new nickname is "Zebra Urine") the
dried up old ex-boxer who took far too many punches on the
head and back of the brain, and is now one of ham radio's
up and comming RF circus stars.

I am interested in getting some feedback on this. My husband and I are both amateurs. I created several cross-stitch designs related to amateur radio and did them for him since there are none commercially available. Is there anyone else out there that is interested in needlepoint of this type. My husband thinks that there is and I should be selling them. What does everyone else think?

It seems to me that he might be at least a bit of a "suspicious person
by nature," after all. :-)

The 1996 and 1997 Annual Reports are also published on
http://www.arrl.org/announce/annualreport/.

Information about ARRL activities are also documented in QST, the ARRL
Letter, W1AW bulletins, etc.

As a few examples from the ARRL Web page, see:

The Media Public Relations page at http://www.arrl.org/pio/.
The "Band Threat" page at http://www.arrl.org/news/bandthreat/.
The Educational Activities Department page at http://www.arrl.org/ead/.
The ARRL network of field volunteers is described on
http://www.arrl.org/field/org/.
The ARRL Foundation (scholarships, etc.) is described on
http://www.arrl.org/arrlf/.
ARRL's Government Relations Page is found at
http://www.arrl.org/govrelations/.

ARRL's work with the Shuttle Amateur Radio Experiment is described at
http://www.arrl.org/sarex/.

The main Index page is at http://www.arrl.org/htdig/bigindex.html,
showing a broader picture of what ARRL does "with all the money."

As just one more example, here is a snippet from the 1997 QST Index:

DC CURRENTS-Column (Mansfield)

Feb, 15
Experimental Radio Service Regulations Revised: Mar, 16
FCC Chairman Hundt Talks to Congress about Public Safety Needs: Jun, 16
FCC Chairman Outlines Commission Agenda for 1997: Feb, 16
FCC Private Wireless Chief Leaves for Greener Pastures: Feb, 15
FCC Unveils National Information Infrastructure Plans: Mar, 15
FCC Wireless Chief Hails Market-Based Spectrum Policies: Nov, 16
Follow-up on Spectrum Auction and the Budget: Oct, 16
H.R. 2369, July 31, 1997: Oct, 16
Hearings, Senate Bills, Attempt to Control Spectrum Auctions: Jul, 15
House Bill Riles Scanner Buffs: Sep, 15
Hurry Up and Wait Is the Mode of FCC Matters: Jan, 15
Is There Life After Adjournment?: Jan, 16
Key Committees Shaping Up With Few Changes for 105th Congress: Feb, 15
Majority Leader Lott Lauds Pressler: Mar, 16
Musical Chairs, or Deck Chairs on the Titanic: Aug, 16
New Amateur Spectrum Bill May Be On The Horizon: Nov, 16
New Anti-Eavesdropping Bill Shocks Scanner Fans: Oct, 15
New FCC Commissioners Headed for Senate Confirmation: Dec, 16
New Feingold Bill Likely to Reflect Amateur Concerns: Mar, 16
New Jersey Amateurs Get the Message Out: May, 16
Plot Thickens on Liability Reform, The: Jun, 15
Q/As on the Liability Issue: Aug, 15
Recent ARRL Filings Stake Out Spectrum Claims: Feb, 16

Representative Eshoo Reintroduces Volunteer Services Act: May, 15
RF Exposure Rules Extension One Small Step for Amateurs...: Mar, 15
Scanner Bill How to Balance Cellular/PCS Privacy with Public Service Needs: Nov, 15
Senator Feingold Listens to Amateurs, Modifies CB Bill: Jun, 15
Senator Lauds Amateur Radio in Congressional Record: Feb, 16
Spectrum Pot Continues to Boil: Sep, 16
Step Forward for the International Amateur Radio Permit (IARP), A: Jan, 16
Subcommittee Hearing Focuses on Digital TV: Apr, 16
Support for Feingold CB Interference Bill Crosses the Aisle: Sep, 16
Telecom Chairman Tauzin Talks with ARRL about Spectrum Concerns: Apr, 15
Telecommunication Bills, 105th Congress, First Session: Dec, 15
Text on Little LEO Sharing Agreed: Mar, 16
Time to Review the Bidding: Jun, 16
Update on Tauzin Bill: Dec, 16
What's Not So Helpful: May, 16
Who's on First at FCC: Jun, 16

I think that his characterization was a bit unfair. I think that we can all benefit from a meaningful disucssion about the quality of each of the services I described through the above examples, and a discussion about the appropriateness of each of the things that ARRL does, but I think that references to "what do they do with all that money" and "only a small cirle knows" are not supported by an analysis of what the League does and the many ways they describe it to the amateur community.

73.
Ed, W1RFI

(And, yes, "all the money" does include staff salary. If the League tried to do it with volunteers, the place would be pretty empty on those sunny days in June. :-) I, for one, usually put in about a 45+ hour week, and when "emergencies" occure, such as the 1996/1997 RF-exposure rules issue, my wife sometimes wonders who I am when she acutally sees me around the house. :-))

Neither smoke nor ponies are used on HF, but CW *is* the second-most used
mode on amateur frequencies below 30 MHz, and it's the only mode permitted
anywhere on any ham band. Reasons enough to continue the tests.

>> If we keep calling it simply a HOBBY, then we will end up with the spectrum
>> we deserve as hobbyists. Keep that in mind.

Nothing wrong with calling one's service to the community a "hobby."
You won't find "ham" listed anywhere in the FCC regs, yet you've freely
used that word in your posts. (Heck, you won't find "sport flying" listed
anywhere in the FAA regs, but that's a common term private pilots use.)

But I must ask: I'm melting solder several hours per week building,
fixing, and modifying radios. Is that a "service" or a "hobby"?

Hi,

I'm already thinking about next summer's holiday destination and it will probably be Florida. Since we've been there before and we mainly go there for our son (7 yo that likes Mickey and co.) there will be spare time (at least 3-4 days) for a side trip to the Bahamas.

Anyone has info on how to obtain a licence (C6/ON4BAM or 'real C6 ??), 'radio friendly' people with rooms/cottages for rent? Other practical info?

BTW. will the US join CEPT before summer or do i still send a Form 610A to the FCC??

Thanks in advance.

bye Maurice

Hello,
I recently purchased a TS130S XCVR for which I am in need of some info.

1)Is there any way to adjust the analog dial to track with the digital
readout?

My analog dial readings vary from 7 to 12 Khz from the digital readout.
The difference
increases as I move up the band. However there is exactly a 10 Khz reading
between the
marks on the dial as indicated by the digital readout.The digital readout
seems to be accurate as I checked it using WWV and the calibrator as stated
in the manual.

2) Is this a normal condition for this radio?

3) Can the date of manufacture be determined by the serial number?

Any info is appreciated.

<a bunch of stuff about Ed Hare's biases>

IMO, questioning Ed Hare's ARRL biases is silly. The man doesn't do what he does at the League because they offer him a huge paycheck each week. On numerous occasions, for compensation of little more than a meal, he has driven three hours, on his own time, to visit our local radio clubs and give presentations on various ham radio oriented topics. I have little doubt that Ed could easily be working at any major electronics engineering company as a project manager.

Quite frankly, I'm amazed he continues to work there.

He'll never answer my question, Lloyd. He has no credible answer. Basically, what happened here is that Hanoi Dan TALKED TOUGH to me and I called him on it. He has an admittedly difficult time explaining how it is that offering a file for download over the Internet is illegal or how it is that the FCC has jurisdiction over said incident.

> question has its use down on the farm.

As a matter of fact, it does make an excellent fertilizer. (I spent many a summer on my uncle's dairy farm in Eastern Pennsylvania as a kid. I also learned of how to milk a cow via machine and by hand, and not to be left out, the joys of walking in fresh steamy cow poo in your barefeet from my cousins also. So I do know a bit about bovines I guess) (grin)

> What bothers me is the poo I read here, that has no other use but stink up the

True - but it does give some people a reason for getting out of bed.

Yes. The "Phoney Preacher from Scranton" pulled up stakes and moved to Georgia a couple of months ago. He is the same guy who would drone on and on and on and on at 14.313 each weekend. Name is John KC3AU. His main claim to fame is as a useable form of "Radio Drain-O" Whenever he would come on his rambling 20 Minute long transmissions would clear out the frequency faster than a skunk in a backwoods rib eatery.

Actually, Jeff, I was told the same thing by RS Management, and by a person inside at corporate.
Whether Henry makes up comments, I can't say. But I can tell you that it is more common than you'd think it should be that RS personell don't know what the hell RS is doing.
Or what they themselves are doing for that matter.

Look for two new HTs (UHF and VHF) late this year or early next year.

Should be like the "mini HTs" that are popping up everywhere.

Doubt if they will be comparable to the 202 and 404.

Kevin

If your concidering buying a VX-1R read this. I've had to send mine in three times for replacement after less than a week each time. The first time was due to a bad E-Prom (3F3F3F) on the screen. The second time was poorly tuned, wouldn't revieve on the frequency it was tuned too. The third time is 3F3F3F again. It doesn't take much at all to make this rig stop working. It was hanging on my rear view mirror the last time and the first time it was in a "Pouch" setting on the table.

My words on the VX-1R???? Don't.....

It isn't broken because with the given answer choices there is
only one possible correct answer. It would only be broken if it
were used without multiple choice answers.

Folks,

I've tried a similar experiment with my 9100 ATT phone. In my case, I
used the extended receive capability of my ICOM ICW32A HT to listen for
the signals. They do, in fact, sound like static when received on an FM
rig. By pressing the channel button on the 9100, the phone could be
made to jump up in frequency by some standard increment each time it was
pressed (it may have been 100 khz, I don't recall). I didn't take it to
the limit in order to find out how many channels were available.

Folks,

I've heard this term used on 75m, and also in this netgroup. Please enlighten me: What does the term STUMPJUMPER mean besides a particular model of mountain bike or a monster truck synonym? I'm not trying to start a flame-war - just trying to find out what this label means.

They seem to waste quite a bit on things like new carpet for the
offices. Huge inventories of books, mags, that will later go unsold and
lost. If they were a real corporation and I was a stockholder, I'd ask
for some heads to roll. But as I'm not a member, I don't worry about it.

I wanted two classes a la page 29 of the comments filed on behalf of the
National Conference of VECs (but we all know this is really Fred Maia, W5YI),
as well as the one by NCI (really Fred) and CQ Publishing (Fred again):

No-Tech Amateur -- just test on operating their 2-meter HT
No-Code General -- same, but they can experiment and buy overseas rigs
No-Code Extra Class -- same, but they can program their VCR too.

My only question, will Fred ever file on this NPRM as himself?

Cheers

As long as they're treated as such, that's how they'll act.

The Massillon Amateur Radio Club (Ohio) had its hamfest last month. The Great Lakes Division director showed up when the doors opened. Talk about butt kissing! You'd think that Leonardo DeCapria <sp> walked in the door!

And just how does this "purposeful" misrepresentation sell more study guides? How do the VECs manipulate the date or persuade the VE teams to do so? Good try at stirring the pot, Mike, but I think the spoon missed just a bit. :-)

Not, this hits the nail on the head -- there are reasons for the "artifically high" failure rate, but they are an outgrowth of people taking a free shot at passing a test they don't expect to pass, not some nefarious scheme to sell more study guides.

You been hanging around rrap too long, Michael.

It is not at all clear, Gareth. Well, maybe it is, I do indeed have an ARRL bias; I believe that we need a strong national organization to represent the interests of Amateur Radio and that, in spite of my occasional disagreement with one ARRL policy or action or the other, I believe that ARRL is the best shot at making it happen. In reality, Gareth, I do not believe in and support ARRL because I work here: I work at ARRL because I believe in what it can be and use my employment as a way of making at least part of that dream happen.

> Let me ask you a very simple question Ed. If possible a
> simple yes or no would be great.....
> Are the directors and paid staff of the ARRL very strongly motivated
> to increase the subscription base of the QST magazine????

I will let you summarize my answer into your own yes or no. First, I look upon members as members, not subscription bases. Am I strongly motivated to want to see hams support ARRL so they can support the work ARRL does? Of course. In 1999, my two planned trips to represent Amateur Radio in the IEEE SCC-28, the "industry" RF-safety committee, may well depend on how ARRL membership fares over the next year. Our membership, or lack thereof, will directly affect what I can do. You tell me, is that "strongly motivated" and are the reasons good ones?

As to the Directors of ARRL, are they strongly motivated? I sure hope so. What else would suffice to have them attend far more hamfests and club meetings in their Divisions than I would ever want to attend? None of the Directors and all but the two officers who are also full-time staff employees are volunteers -- they recieve compensation for some

expenses but absolutely no salary for what they do for the League? If they are strongly motivated, what motivates them and are the reasons good ones?

I probably should have avoided my little snip, but you are the one who first brought it up, then followed it by concerns that sure looked suspicious to me. Questions are a valuable tool and I would fault no one for raising them. But I must point out that you have not raised questions, but have expressed your concerns as facts and, from my personal knowledge of the issues surrounding those "facts," I believe them to be wrong.

> If I were going to make a generous contribution (say 25 million) to

> strongly agree with this statement.

ARRL would easily stand up to such scrutity. The Annual Report, and our tax exempt status, require that our conduct be evaluated and certified annually by the team of CPAs we contract each year. (And before you ask, I don't think any prestigious CPA firm is going to put their repuation on the line for what we pay them, so their report is, IMHO, trustworthy.(

Of course, when you are done with such evaluation, the League will sure appreciate that $25 million -- I guess I am going to attend the committee meetings after all. :-)

> de .... N1MSV a member in good standing of the ARRL

As am I, Gareth, one or two years at a time. :-) And I will remain so as long as I think that ARRL continues to be the best shot we have at getting things done. If there are problems with ARRL (and I must admit that I think there are a few), it is far easier to fix them than to start anew.

Can anyone ID these two LOWFER (1750 meter) beacons
I am receiving in Austin, Texas:

A. 174.5 KHZ sends "D" every 10 seconds.
Heard 24hrs a day.
Every third "D" preceded (2 seconds) by an "E".
"Hiccups" about every 5 minutes, then returns to normal sending.
Good sigs here in Austin.
This is not "D" in Iowa (175 KC).

B. 189.7 KHZ sends "TEXAS AGGIES" about 7-10 WPM.
Copied 1 PM 10 December 1998, QSB down into noise 2PM.
QSB back up at 2:30 PM.

Good .wav files of these emailed on request (big).

Thanks and 73 DE Dave Stinson AB5S

I tried something similar with a 900 MHz analog phone from GE. In my case I was interested in ham radio possibilities, since it already transmits FM in the 900 MHz amateur radio band.

I found that the RF module was controlled by a serial interface to a microcontroller. I put a logic analyzer on the serial lines and figured out how to prevent it from changing channels (I think). The next step was to make my own microcontroller do the controlling. Due to several reasons (being lazy was one of them) I didn't get past that point.

I appreciate your frank answer Ed, and will admit your forthrightness and obvious integrity has somewhat mitigated my suspicions. I believe an informed person has an obligation to question closely the motivations of those who solicit donations as well as those who demand money by force of law. (state and federal taxes). My inherent distrust of the motivations of big government often spill over onto others who want my money. I will question motives carefully all my life and would encourage others to do the same.
Is the ARRL the best shot we have to perpetuate a hobby and service we both love?? ...at the moment this "seems" to be the case, but I for one would certainly welcome some sort of "competition" to your lobbying efforts. It is a pleasure to communicate with an individual who presents civil and rational argumentative discourse. If our public discussion encourages others to think intelligently about the problems facing ham radio in the unknown future, then I am sure you will agree it has been well worth wearing our fingers out.

Why? We don't transmit WX pictures via voice or CW. Each mode works
well in a particular area in which others might fail. Transmitting
huge encoded files via digital means is really a waste of spectrum
when such data could be sent via internet.

If you want to include baud rate in the equation, you should also include
propriety, too. Might as well through in a "content" factor, also.

> Is the ARRL the best shot we have to perpetuate a hobby and service
> we both love?? ...at the moment this "seems" to be the case, but I
> for one would certainly welcome some sort of "competition" to your
> lobbying efforts.

Acutally, in many ways, that competition already exists. Groups like TAPR, AMSAT and others represent the interests of specific portions of Amateur Radio. In many cases, ARRL willingly takes a back seat to those interests; as the ARRL Lab staff have prepared input to be used by the US delegation to the international working group working on new spurious emissions requirements, I was told that the input on the part of the requirements that would deal with satellites would come from AMSAT and that we would defer to them, as one example. In other cases, each group may have a different interest to represent and so ARRL and other groups may well have different comments and input to a process.

In many cases, such as the current restructuring issue, there is not any single view to be "represented." The ARRL is certainly NOT the only group filing comments with the FCC wrt the restructuring, for example -- and, IMHO, rightfully so. I am quite pleased to see that there is a wide range of representation.

However, in many other cases, such multiple "representation" simply does not happen. To cite the example I chose earlier, many industry groups appreciate having the interests of Amateur Radio represented, the IEEE RF-safety committee, for example, but probably cannot accomodate multiple representatives from multiple organizations -- one strong, broad-based representative organization fits the bill. And, in those cases, that representation is probably quite representative of Amateur Radio as a whole; when the subcommittee that is drafting what will be an IEEE/ANSI Recommended Practice for the development of RF Safety Protocols in the workplace indicated that any entity that uses RF should have a trained RF Safety Officer, I quickly pointed out the small business, the club repeater and other such organizations would fall under that wing and having a detailed set of mandated educational requirements would not fit the bill and the lack of flexibilty could open these small users up to some, unknown, degree of liability problems.

In other cases, a bit closer to home with the FCC, the ARRL is the ONLY voice choosing to offer input. Last week, I prepared a detailed set of comments for our Washinton office wrt an FCC NPRM to put relatively high-powered, point-to-point links on 24 GHz under Part 15 -- our

comments sought to protect Amateur Radio from harmful interference and another set of comments wrt an FCC Notice of Inquiry to allow Part 15 ultrabroadband emissions at levels considerably above the present Part 15 limits. In the latter case, the League offered input that, under some circumnstances, such relaxation could be possible, but we also offered some analysis of those circumstances where it may not.

It is also a difficult balance between the need for multiple views to be adequately represented in various arenas vis a vis the need to have strong, effective representation. In some cases, I have seen various parts of Amateur Radio working at cross purposes, perhaps to the detriment of the Service as a whole. All in all, I would choose to err on the side of ensuring that all views are adequately expressed, but I also realize that there could well be a price to pay, in the short run.

> will agree it has been well worth wearing our fingers out.

I wish that all discussions here could be so productive, but, alas, there are some who will call another a twit at the drop of a hat and feel that they have made a point. IMHO, the only point that such an approach makes is that the person using it doesn't have much savvy about how to get things done in today's world. I must admit that I do consider that every time I go for my keyboard; the way I represent myself here may be the only way you can judge how I represent Amateur Radio in other circles and I want to make sure that your impression is a good one. I am sure that there are those who disagree with things that I say, either because they are wrong, I am wrong or "reality" is somewhere in between. But honest, and considerate, discourse is the ONLY tool we have to bridge the gaps and find the common ground that usually represents solutions to the problems at hand.

No poll. When I chat with them (net, in person, telephone) on occasion, I'll try to get them to get on the air and work a little CW with me. That's when they tell me they won't because they can't. My late cousin, an active ham for over 50 years said he never used a key once after passing the test.

If a large percentage of HF hams are like this, and I think they are, then CW would not be much of an emergency backup as many claim. If they are just slow as you claim then they also would be useless in a real emergency.

CW is fun and that is its *only* value in modern amateur radio....
(If you don't count it's weeder value in the code test exam.)

> Tom - N8ECW

No Tom, it's not the same guy. The guy who you are refering to above
is W2VJZ Irb. Ole Irb is an AM'er who is known to be very eccentric.
He's been around for almost 30 Years. Only operates AM. Lives in a
converted garage in the middle of an industrial park in NNJ. Get's on
and makes 2 HOUR LONG transmissions, reading from various right
wing publications like the Spotlight. Likes to "ghost talk". His other
trademark is to leave his microphone open (with half a kilowatt of
full carrier AM) and ring wind chimes or walk around his garage-house
and talk to himself while he's cooking eggs for all to hear over the air.
Another classic "Irb-ism" is when he says he's going to "go make a deposit".
That's a code work he's going out to his outhouse. Yes - Ole Irb DOES NOT
HAVE indoor plumbing - he is probably the only ham in NJ who still makes
daily use of an un-heated outhouse. People who have visited Irb say he
has wall to wall classic radio gear in various states of disrepair and he has
to hop and climb over them to get around. One visitor a few years ago claimed
he counted FIFTY (50 !) Johnson Viking Valiant transmitters, and that his
"bed" consisted of an old mattress propped up atop a row of them on the
stone floor.

Get the idea...?? Irb is truly one of NNJ's most unique ham
personalities. Someone really should do a web page with photos.
You have to see it to believe it. (He is also rumored to have 2 MILLION
in the bank - but still chooses to live in a 60 by 60 garage with a second
converted schoolbus house on blocks parked outside. This is truly an
amusing hobby with even more amazing people in it eh?

>electronics engineering newsgroup.

I think I can safely speak for the other two to point out that NONE of
us are "anti-CW" ... we're anti-CW-test as an unnecessary barrier to
entry.

Gary and I, and Cecil, too to a degree, poke holes in some of the Morse
Myths, not because we want anyone who wants to use Morse to stop using
Morse, but only because the Morse Myths are so commonly hauled out and
waved about like some sort of patriotic flag-waving ritual to "justify" the
continuation of forced Morse testing to obtain an HF ham license.

By refuting the Morse Myths, we are not trying to persuade anyone to
stop beeping, just to stop insisting that EVERYONE ELSE must learn
to beep before they can obtain meaningful privileges on HF that have
ABSOLUTELY NOTHING to do with Morse.

>This is a ham newsgroup...a *hobby newsgroup*.

Ham radio is defined as a service ... that most pursue it as
a hobby is fine, but it's still got goals that go far beyond DXing
and collecting contest wallpaper.

>I could say what I think you said in one sentence: There are
>more efficient ways to communicate than CW.

But many Morse advocates will leap to state that that's not so,
that "Morse will get through when nothing else will." some of us
take exception to the propagation of such utter falsehoods in
the interest of greater understanding of the technical realities of
the world in which we live.

>But this isn't NASA, so efficiency is not a necessity.

If we don't modernize and use our spectrum efficiently, the FCC
will eventually (probably sooner rather than later) take it away from
us and give (or sell) it to someone who WILL use it more efficiently.

>CW is fun.

One person's "fun" can be another person's torture. That YOU
and some others find it "fun" is NOT a valid reason to force it on
all.

> Most people who use it, use it only for that reason.

That's true ... it only reinforces the fact that it is no longer
reasonable or necessary to force it on everyone by holding
the HF bands hostage for Morse proficiency, even of those
who don't find it "fun" and don't wish to use it.

I don't have a problem with something that would actually save
large numbers of lives ... but in today's world, Morse is seldom
used for emergency communications ... the investment of 10s
of millions of man-hours required for the hundreds of thousands
of hams forced to learn Morse over the past several decades
has been a total an utter waste as far as "saving lives" is concerned.

>
>
>Important to who? Not to me. I'm retired and enjoy being stuck in the
>50/60's technology. I will never be in the electronics business. Why should
>I study new technology unless I want to?

Because that's MOST of the thrust of Part 97.1, the section of the FCC
Rules which define the Basis and Purpose of ham radio ... NOWHERE
in there does it call it a hobby, talk about fun, or "preserving the traditions
of the 'good old days'," etc. (Note that I'm not opposed to folks having
fun on ham radio ... just pointing out that that's a "fringe benefit" NOT
the government's reason for establishing and maintaining ham radio and
its extremely valuable spectrum allocations.

>ame as the forced code test thing,
>right? I'm sure there are many people out there like me who would like to be
>hams. They can learn how to operate today's rigs safely in a couple hours.
>Why should they be forced to be an engineer any more that you should be
>forced to use the code?

No body is suggesting that one should have to be an engineer to be a ham. I'd venture to guess that 85% plus of today's hams aren't engineers ... or even technicians (in the electronics technician sense) ... unless you looked at the no-code techs ... I'd suspect that a much higher percentage of them are actually more familiar with today's technology than the olde fartz who long for the days of vacuum tube radios.

>In reality the ham test is really a weeder to keep the successful applicants
>to a minimum number. The proposed 5 wpm code test while almost useless on
>the air, does the weeder job.

It shouldn't be the government's purpose to "keep the successful applicants to a minimum number. " The only legitimate purpose of government testing and licensing it to assure that applicants are knowledgeable in the rules that they are required to follow and technically competent enough to not be a danger to themselves, their physical neighbors, or (by technical incompetence which results in interference) their spectral neighbors.

I'm saying that it's not the government's place or job to provide or enforce "weeders" whose sole purpose is to limit participation by folks who are perfectly qualified (except for the "weeders", of course).

> If there is a very simple test or no test then we have CB. Too hard a test
>and the hobby dies from lack of people and thus political power. Coming up
>with a test that doesn't open the floodgates but still makes sense, therein
>lies the problem. I doubt the changes coming up will do that.....

I haven't seen anybody with any sense propose eliminating the written tests (or making them ridiculously simple, either) ... in fact, many of the commenters in the current NPRM (including me, personally, and the comments I wrote for NCI) express concerns about the lack of emphasis on reasonable technical competence and the decline in same over the past several decades under the "incentive licensing" program, where Morse proficiency was elevated to ridiculous levels of importance, and one's license class has come to be viewed by many as a "certificate of competence" or "graduation certificate" of some kind.

That, of course is a bunch of poppycock, since I personally know many extras who really don't know jack squat about radio. (But they can, or at least at one time could for a brief period, "beep real fast.")

Tom ... take 10 minutes and read my comments to the FCC ... and those that
I wrote for NCI (which were reviewed, commented on, and after a few minor
revisions, approved by the NCI Board.)

You won't find any of the crap that you attribute to me in either set.

They've both available in .PDF form with all of the footnotes on
my personal web page ... NCI's are, of course, also available on
the NCI web page under the "Articles" button,

>Acutally, in many ways, that competition already exists. Groups like
>TAPR, AMSAT and others represent the interests of specific portions of
>Amateur Radio. 73, Ed Hare, W1RFI ARRL Lab

Actually you have very very weak competition. Your main competition is CQ magazine which is much smaller with a poor circulation, and then there is 73 magazine which is on its last legs. World Radio is more a ham newspaper. That's about it.

But, you say, your not just a magazine. True, but I'll bet if you ever separated the magazine part from the membership part (say $20 for the mag and/or $10 for the membership) you would get a rude awakening. Your mag is great and for that reason I subscribe. As for your efforts in the past licensing fiasco, I would have canceled the membership part long ago. Things might turn out better this time if you just stay out of it....

>Carl - wa6vse

But you see, those regulations are the same ones that consider CW essential. That kind of works against you there doesn't it. However I think those regs don't seem to fit most modern hams anyway. If they did then most would lose their licenses. Hams generally haven't contributed to any electronics advancement in years and years. Take ham packet for instance. Those hams were all in the business, and knew what they were doing from their professional careers. The professionals developed the ham technology, not the other way around. Many recent advances or enhancements were also made by ham professionals working for ham manufacturers who then marketed the stuff. Sure there may be an exception or two, but how many present day Extra Class graduates of our present sham test are really going to be able to do any meaningful research. Laughable.

Civic service, that is helping the public with communications in emergencies, and charity events ect, is probably our only real official reason for existence under the regs.

But for most ham radio is a playground. A public park. A place to play. How are we going to justify keeping all those VHF and up frequencies? Darned if I know. Most of them are vacant and those few hams that occasionally do use them certainly don't justify keeping them. Anybody who listens to 2 meters I sure has wondered how we get to keep that band. There is less pressure for our HF bands so the scuzbag ops there probably won't hurt us.

But I doubt that the government will try to remove us completely. If you can sue for a waiver when you're too lazy to learn the code, imagine the litigation if they tried to take away ham radio. Ham radio is a *right* and if you don't believe me just ask my lawyer....

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 04:00 UTC, 11 DECEMBER

/\

FOR NEAR-REALTIME RECEPTION OF AURORAL ACTIVITY WATCHES
AND WARNINGS FROM YOUR HOME, WE RECOMMEND OBTAINING THE GE+LERT SOFTWARE AT:
http://solar.uleth.ca/solar/www/geolert.html.

FOR THE MONTH OF DECEMBER, INDIVIDUALS WHO PURCHASE GE+LERT
WILL RECEIVE ONE *FREE* YEAR'S SUBSCRIPTION TO OUR AURORAL ACTIVITY
WATCHES, WARNINGS, AND OTHER E-MAIL PRODUCTS AVAILABLE AT:
http://solar.uleth.ca/solar/www/sublists.html).

ACTIVATION: EFFECTIVE IMMEDIATELY
VALID UNTIL: 19:00 UTC ON 11 NOVEMBER

HIGH RISK PERIOD: 11 DECEMBER (UT days)
MODERATE RISK PERIOD: 11 DECEMBER

PREDICTED ACTIVITY INDICES: 23, 12, 10, 08 (11 NOVEMBER - 14 NOVEMBER)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: LOW TO
MODERATE

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: LOW (AFTER LOCAL MIDNIGHT)

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: POOR TO FAIR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

SOUTH-CENTRAL B.C. TO CENTRAL MONTANA TO NORTHERN SOUTH DAKOTA TO
SOUTHERN MINNESOTA TO WISCONSIN TO MICHIGAN TO DARK SKY SITES OF
NEW
YORK STATE THROUGH SOUTHERN MAINE.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN UNITED KINGDOM TO EXTREME NORTHERN EUROPE
INCLUDING
MUCH OF NORWAY, CENTRAL TO NORTHERN SWEDEN AND CENTRAL TO
NORTHERN
FINLAND, TO NORTHERN RUSSIA. EXTREME SOUTHERN REGIONS OF NEW

ZEALAND
AND POSSIBLY EXTREME SOUTHERN REGIONS OF AUSTRALIA MAY ALSO SPOT
PERIODS OF ACTIVITY.

SYNOPSIS...

The arrival of a modest solar disturbance late in the UTC day of 10 November has intensified over the last several hours. Reports of mildly active auroral activity have been received from some dark-sky middle latitude sites. The activity is currently mostly quiescent and is visible primarily because the auroral ovals have expanded equatorward. Periods of substorming may be observed near the local midnight sector that could provide more widespread opportunities for observing modest levels of auroral activity.

This disturbance should begin detensifying over the next 12 to 18 hours.

This watch will remain valid until later this UTC day (19:00 UTC on 11 December). It will then be updated or allowed to expire.

PLEASE SUBMIT ANY OBSERVATIONS YOU MAKE OF AURORAL ACTIVITY TO:
http://solar.uleth.ca/solar/www/auroras.html

** End of Watch **

In the 60's, this whole idea would have resulted in the immediate
arrest of these people. Not giving call signs and broadcasting music
(no only to mention hate speech) would land these people in the
Federal pen. Anyone justifying these things in the name of 'its a
political cause' should think again. I ask every ham out there,
do you want the ham bands to become the same as CB? Before you
answer, just listen to the talk on the CB radio.

Just in time for Christmas.... THE JAMMERBOX! A Jammers Delight!

From Sangean and Icom come the Jammer Box. A whole new way to enjoy "The ZOO" and the Liberty Net.

Always wanted to interject on top of a netmember, or wanted to tell KJI he did a good job of jamming, well now you can.

5 Frequencies - 14.300 3950 3901 14.313 3894.5

1kw tranmitter with 96" outside loaded whip.

Built-in tape player,

5 preset noise-makers
"Anchors Awiegh"
"You people make me sick"
"Pork-Butt Song"
"Moan faggots, moan"
"Blah,blah,blah,blah"
"them faggots"

plus you can add 5 more

Comes with a netmember and GoodFellow detector, keys up when a Intercon or Liberty Net member checks in.

Not around when the Liberty Net comes on, no problem, leave it on and it will come on automatically at 10:00pm EDT Sat night and will do the Jamming for you!

For a limited time, when you order by Ded 18th, you will get a autographed copy of "german marching music" by Walter Miller, W2YEE

Price: $399.00 What a steal! Get that SWL a gift he'll use for years and years.

(I posted this the other day, but when it made the list, the background was all red, at least on my computer. That makes it a little hard to read. I tend to delete those without reading them. Therefore I am posting this again)

(I got in trouble the last time I cut-n-pasted on this list, so I hope I got it right this time)

In a message dated 98-12-06 14:59:14 EST, Carl R. Stevenson wrote:

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
... many of us just recognize how badly Morse testing and other outdated, backward restrictions have hurt/are hurting ham radio. We want to see ham radio rejuvenated so that it stands a chance of surviving for grandchildren (and theirs), rather than being dropped
>>>

I fail to see how dropping the CW requirement will *rejuvenate* ham radio, given what is available WITHOUT having to know any CW at all.

Let me paint a picture here. The driving distance between New York City and Los Angeles (according to my AAA North American Road Atlas) is 2787 miles. If we were to take that as all the bandwidth that hams now have WITHOUT KNOWING ANY CW, then dropping CW would give then almost an extra 1/2 mile.

>> > So tell us, Bob, what new communication modes have you patented and
>> > are utilizing on the ham bands.
>> >

>> Psionics is the next wave.
>

ICOM is currently working on a black box psionics receiver that works through a direct interface in the brain. PBT lawsuits have already been filed.

Billy Tauzin has begun motions to ban it.

Rumor is that Ten-Tec is also working on a Psionics receiverin kit form, but it is only expected to receive thoughts from Country Music fans. It will marketed by Anheuser-Busch, and is expected to be standard equipment on all major brands of mobile home.

And, Watkins-Johnson is reputed to have had a psionics receiver for a while now, but they will not release it until they move all those warehoused HF-1000s. Besides, it really pissed off Newt Gingrich.

5034. Re: ARRL - Friend or Foe? (was RE:Give me a break)

More Fractured Fairy Tales. When I read the following anologies I think of Henny Penny and Humpty Dumpty. This guy sounds like one of the Kings horsemen. And by the way Henny, the sky wont come down if Morse is deleted from Amateur license exams.Dont worry about todays childeren, they dont need a lecture in how to fail.

SB PROP @ ARL $ARLP050
ARLP050 Propagation de K7VVV

ZCZC AP50
QST de W1AW
Propagation Forecast Bulletin 50 ARLP050
From Tad Cook, K7VVV
Seattle, WA December 11, 1998
To all radio amateurs

SB PROP ARL ARLP050
ARLP050 Propagation de K7VVV

Solar activity was lower this week, with both average solar flux and sunspot numbers down about 10 points each when compared to the previous week. Average solar flux for the previous ninety days was 131, and solar flux was above this value on every day, indicating a good general upward trend.

Solar flux peaked at 162 on Tuesday, and the trend now is downward. For the ARRL Ten Meter Contest this weekend look for a solar flux of 132, 128 and 122 on Friday through Sunday. Geomagnetic indices should be unsettled to active, with the planetary A index peaking around 15 on Saturday.

It would be nice to have a higher solar flux for the ARRL Ten Meter Contest, but contesters can look forward to much better conditions than last year. Last year the Friday through Sunday solar flux for the 1997 ARRL Ten Meter Contest was 92.5, 89.3 and 90. This just wasn't enough for good propagation over most paths. Just plug the numbers into any popular propagation prediction program, and the predicted numbers for this weekend look great in comparison.

The general trend in solar activity has been up this year. Take a look at the chart at http://www.dxlc.com/solar/ or at http://www.wm7d.net/hamradio/solar and see the general upward trend. Beyond this weekend look for solar flux to drop to 120 or lower by December 16, then rise above 130 three days later and above 140 by December 22. Flux values are expected to peak above 150 around December 27.

NASA released an interesting story this week about solar wind squeezing ions out of the ionosphere. See the press release and images at http://www-spof.gsfc.nasa.gov/istp/news/9812.

Sunspot Numbers for December 3 through 9 were 136, 109, 91, 106, 143, 158 and 132 with a mean of 125. 10.7 cm flux was 153.1, 148.2, 142.4, 142.3, 153.2, 162 and 153.9, with a mean of 150.7, and estimated planetary A indices were 7, 7, 12, 7, 6, 5 and 5, with a mean of 7.

Here are some path projections for the ARRL Ten Meter Contest this weekend.

Look for Europe from the East Coast around 1530-1700z, South America with strong signals around 1430-1930z, South Pacific around 1800-2200z, Hawaii around 1800-2030z, and the West Coast from 1800-1930z.

From the Central USA, look for Europe around 1600z, South America from 1500-2100z, South Pacific at 1730-2330z, Hawaii from 1800-2300z, Japan around 2200-2300z, the East Coast around 1800-2000z and the West Coast from 1700-2100z.

From the West Coast, check South America around 1530-2330z, South Pacific around 1830-0030z, Hawaii around 2000-2100z, and Japan around 2230-0000z.

I need some help. I have an Icom 756 that is like new that a fellow wants to trade me a Kenwood 870 for. I have always wanted an 870, but I sure do like the 756. I dont care anything about 6 mtrs, but I am more concerned with the difference in receive between the two rigs. I would especially like to hear from people that have owned both rigs and can tell me which they thought was the better rig. I am looking for a rig to keep as my own personal rig, and not to make a buck off of. I know the 870 is the more expenseve of the two. but like I say, I am more interested in which one is the better rig, and not which one cost the most, or has the most features....Thanks for your help.

I agree. When the FCC finally surcombs to commercial pressures and actually starts taking frequencies away from the amateur bands, the reality will really sink in. However, by that time it will be too late.

I do it for that reason, but also to try to encourage more amateurs to try
more modern methods which *do* get through better than OOK Morse.
There are a number of them, some fairly popular, some not yet popular
among amateurs, some that may never be popular among amateurs.
We're supposed to be a continuing education service among other things,
and I'd like to encourage more amateurs to learn about techniques based
on the knowledge of coding and signal design we've gained since 1845.
I look at it as a way of lighting a candle in the darkness when I write to
dispell the Morse Myths with some hard technical facts.

>>This is a ham newsgroup...a *hobby newsgroup*.
>
>Ham radio is defined as a service ... that most pursue it as

>and collecting contest wallpaper.

Yes, amateur radio is a voluntary avocation, a hobby, but it is also a
federally chartered radio service with objectives and purposes which
extend beyond that of a mere pass time. It exists, as do other radio
services, to serve the "public's interest, convenience, and necessity"
according to the legislation under which it is governed, ie the
Communications Act of 1934 as amended. It has a set of defined
goals set forth in 97.1. If amateur radio fails to deliver on its objectives,
then its existence as a federally chartered radio service is imperiled.
In other words, we've been granted use of some very valuable public
resources, if we don't show that we are making productive use of
them in the public interest, then we will lose those resources to others
who will.

One of the goals of 97.1 is to self-train in communications techniques,
another is to advance the state of the art, another is to serve as a reserve
pool of skilled operators, technicians, and electronic communications
experts for the nation. Historically, amateur radio's reserve pool has been
tapped in times of disaster and national emergency (ie war) as a ready
source of skilled operators and technicians to augment regular public
communications assets. In so doing, it has served the public interest
and necessity by augmenting civil and military radio communications
in time of need.

The majority of then licensed amateurs served in WWI, and a large number of then licensed amateurs served in WWII. Most were able to do so with very little additional training in radio communications. They provided great benefit to the nation. Many amateurs have provided a continuing role in civil emergency communications. But since WWII, and more sharply in the last decade, there has been a revolution in radio communications which amateurs seem to have largely missed. Most amateurs would find that they don't have the right skills to operate or maintain a modern civil or military communications system. And even more sadly, most amateurs today are too old and too unfit to serve if the need arose.

One of the objectives of licensing reform is to attempt to reshape the amateur radio service in such a fashion that it will have a return to relevancy in regard to its chartered duties to the public interest. A question we need to ask ourselves is how does a Morse testing requirement serve the public interest, convenience, or necessity today? If we look at manpower requirements, we see few openings requiring Morse proficiency today. The pool of available Morse operators vastly outstrips demand. OTOH, if we look at the demand for people with modern technical skills, we see a shortage which requires us to depend on foreign labor to meet demand. So it makes sense to refocus amateur radio away from Morse and toward more relevant modern skills.

Another objective of licensing reform is to aid us in altering the demographics of amateur radio. Amateur radio has changed from a young man's pursuit to a mostly retirement activity today. It doesn't serve the public interest very well to train people nearing the end of their lives. We need to be training young people. To do that, we have to attract younger people who have grown up with a technology more advanced than OOK Morse. They necessarily view amateur radio in the context of other modern communications systems. An insistence on Morse code speed testing has the appearance (as well as the reality) of being an anachronism whose only real purpose is to act as a hazing ritual for passage into amateur radio's long range spectrum.

Reforming licensing won't turn things around by itself. It just enables us to turn things around if we are willing to do so. If we, current amateurs, don't accept the challenge to recruit new (and younger) amateurs, to elmer them in relevant techniques (which requires that first *we* get up to speed on modern techniques), and to vigorously serve as role models, then all the licensing reform in the world won't alter amateur radio's slide into the grave.

Our demographics say we have only a little more than a decade to stave off the Grim Reaper from sharply diminishing the ranks of amateur radio. I frankly don't know if enough of us can rise to the challenge, but I'm sure that we can't while saddled with regulations out of the Dark Ages. Cries of "get a horse", and demands of demonstration of skill with buggy whips, have no place in a transportation system based on mechanized transport. And demands of demonstration of Morse skills have no place in a modern telecommunications system. Amateur radio has become the last bastion of that anachronism.

Now all that said, amateur radio *is* a hobby to most of us, and as hobbyists we have many varied interests. Some of us may find that we enjoy reliving the exploits of our forebearers, in effect participating in a sort of living history exhibit. That's fine, nothing wrong with that at all. But it is wrong to insist that

everyone demonstrate a facility with an anachronism merely because some
of us may find its use "fun" or "challenging". It doesn't serve our charter, and it
doesn't advance our interest in the survival of amateur radio as a radio service
serving the public's interest, convenience, or necessity into the 21st century.

CW definitely has it's place in ham radio. the whole hobby was founded on this one mode of communication. BUT it has been left behind because it is just so much eaiser to open your mouth and speak into a mike than to pound out what you want to say one letter at a time. Todays world is a world of fast action, and a lot of people just dont like to sit and wait for someone to dit dah his comments. The problem is that most people are not proficient at cw, and there is the rub. I fell that if we were all able to run at about 20 wpm that cw would be a lot more popular. But most of us are so eager to get to use our new hf voice privileges as soon as we upgrade from tech to general, that the cw key is often the first item to fall into disuse. Most of us have good intentions to continue to use cw, but as time slips by so do our good intentions slip away. I salute those of you who do not let this happen. But I guess what is the most important thing is that there is plenty of room for both, and all modes of operation. If you dont like cw then just leave it alone. If you do like it then by all means enjoy it. But to fuss and fight over the use of this mode of operation is a waste of time. No one is going to change anyone's mind about cw, or ssb or anything else as far as that goes. I hope cw will always remain a part of ham radio, it may not be with me as a member of the cw ranks, but for those who love it, more power to them.
Merry Christmas
Tom Hix

All I know is, I will stick with CW as long as I can. As for being slow, it does not have to be slow. There are many who use CW at speeds in excess of 50 wpm. Actually 50 wpm is the most ideal speed for rag chewing on CW. To go a step further, 70 wpm is quite common.

5057. New Amateur Radio Search Engine

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-11 00:00:00 UTC

New Amateur Radio Search Engine online......

There is now a dedicated Amateur Radio Search Engine for amateur operaters. It is located at http://www.surfsouth.com/~wharrell/fest

This is the Sunbelt Hamfest site and has the link to the new search engine. As the database grows it will help Amateur Operators locate Amateur relate sites easier.

Sell that surplus gear during the holidays and have more for Christmas. Send your listing to wharrell@surfsouth.com and put in Subject: Hamfest Listing

We look forward to your emails and invite you to post your page in the Search Engine.

The hamfest boneyard listing is free.

FCC ENFORCEMENT HONCHO DONE "TAKING NAMES"

The FCC's Riley Hollingsworth, K4ZDH, is making his list and checking it twice. And now that he knows which hams are naughty, not nice, he's ready to take enforcement actions against the most flagrant amateur offenders.

"Fully half of the amateur problems on HF relate to a specific group of jammers--malicious interferers who apparently enjoy disrupting as much amateur communication as possible," said Hollingsworth, the FCC's point man for amateur enforcement within the Compliance and Information Bureau. "Enforcement action against this group is long overdue."

Coal could be showing up in some Christmas stockings. Hollingsworth has prepared a report to his boss, CIB Chief Richard D. Lee, detailing his findings and fingering the most serious violators in a "top 10" list which he declined to make public just yet. His memo urged "immediate enforcement action."

Hollingsworth said he's talked with more than 250 people on the amateur enforcement line (202-418-1184) since the end of September, when the FCC's latest amateur enforcement initiative kicked into high gear. In addition, he has received more than four dozen letters and e-mailed comments concerning problems in the Amateur Service. Hollingsworth has concluded that, while most amateurs abide by the rules, a few habitual offenders continue to flout the law.

"We are not going to stand for the Amateur Service to be further degraded or destroyed by them," he said.

Hollingsworth says that jamming and deliberate interference is the most common problem, accounting for 31% of all complaints. Repeater misuse and jamming account for another 29%. But he considers the HF abuses--most typically reported on 75 and 20 meters--to be the more serious offenses because they can be national or international in scope. Other general problems accounted for another 17% of the complaints, Hollingsworth said. A full 10% of complaints concerned an unlicensed individual in California who already has spent time in jail for past convictions.

Hollingsworth has sent out 30 informal "warning letters" to individual operators as a result of complaints. The letters warn the recipients that a complaint has been received about the recipient or someone using his or her call sign, indicate that the allegations--if true--could jeopardize the amateur's license, and request the recipient to contact the FCC to discuss the matter.

"In almost every case the recipient has contacted us," he said. "In one case, the licensee contacted us, apologized, and reports since that time indicate that the licensee has become a model operator." Some amateurs have reported to the ARRL that amateur behavior has improved--dramatically in some areas--since word hit the street that the FCC was taking amateur enforcement seriously. For its part, the League has said it is willing, for now, not to pursue its request to further privatize amateur enforcement.

Hollingsworth says the warning letters will continue, but now he's taking aim at the hard-core scofflaws within the Amateur Radio community. "We have now let everyone out there know we're back," he said. Continued violations will "guarantee" license revocations, fines, or--in extreme cases--equipment seizures.

"Church is out now," he said. "We mean business and we're strapped in and ready to ride." Hollingsworth said Amateur Radio rulebreakers "continue these violations at their own risk."

VICE DIRECTOR BODSON WINS IEEE STEINMETZ AWARD

The Institute Of Electrical And Electronics Engineers has named ARRL Roanoke Division Vice Director Dennis Bodson, W4PWF, as the recipient of the prestigious 1999 Charles Proteus Steinmetz Award. The award, sponsored by the IEEE Standards Association, is given for major contributions to the development of standards in the field of electrical and electronics engineering.

Bodson recently retired as chief of the Technology and Standards Division for the National Communications System. He was cited "for leadership and technical contributions to standards for digital facsimiles and other telecommunications technologies."

In addition to the bronze medal and a certificate, the Steinmetz award carries a $5000 honorarium. A formal presentation will be made next June at the IEEE Communications Society's International Communications Conference in Vancouver, British Columbia.

Bodson, 59, was first licensed when he was a teenager. He's an ARRL Life Member, a Fellow of the IEEE and of the Radio Club of America. A Registered Professional Engineer in the District of Columbia and in Virginia, Bodson and his wife, Rita, live in Arlington. They have two sons, Dennis, W3DZK, and Brian.

HAM RADIO HERO HONORED

Ham hero Lonnie McVaigh, KB9LUN, of Decatur, Illinois, has been honored as the latest recipient of the prestigious Samuel I. Keene Memorial Service Award from the Disaster Preparedness-Emergency Response Association. McVaigh received the award November 19. It carries a $1000 honorarium,

McVaigh was seriously injured while on storm-spotter duty. "Instead of simply reporting the location and movement of the funnel cloud that threatened Decatur on April 19, 1996, Mr. McVaigh warned people to get off the street and into shelters as the tornado bore down on them," a DERA statement said. As time ran out, McVaigh took refuge with a family in their basement as the twister hit their house. He was seriously injured when the storm toppled the chimney into the basement.

McVaigh's wife, Melissa, KB9MDF, had stayed in contact with him via Amateur Radio as the storm hit. As a result, she was able to alert the rescue squad, which promptly located McVaigh and got him to the hospital.

McVaigh suffered a broken pelvis and nerve damage in his legs. He has had to endure several operations and a lengthy and difficult rehabilitation program. Because of his injuries, McVaigh can no longer work at his job and has had to rely on public assistance, Social Security, and help from friends and his church. The McVaighs have three children of their own plus five foster children. His slow recovery continues.

DERA Executive Director Bascombe "Jay" Wilson, W0AIR, said the organization picked McVaigh from among candidates representing every

continent. "The heroism and continued courage of Lonnie McVaigh serve as an inspiration for us all," Wilson said.

EDUCATORS "GO THE GRANT ROUTE" TO FUND SCHOOL HAM STATIONS, PROGRAMS

Three educators have received grants to set up ham radio stations in their classrooms. The biggest grant--a whopping $12,000--was garnered by electronics teacher Fred Usherson, N2EGQ, of Floral Park, New York. In his grant proposal to the World of Knowledge Foundation, Usherson cited the need to create an Amateur Radio program so that his Queens Vocational Technical High School students could handle emergency messages and gain marketable electronics skills. "Amateur Radio will be integrated into our electronics curriculum," he said. "I want to get all students in my classes as licensed hams."

Teacher Sarah Cowan isn't even a ham yet, but she still managed to get a $1,500 grant through Los Alamos National Laboratory to set up an Amateur Radio station at Pajaro Middle School in Santa Cruz, California. The grant, from the US Department of Energy's Teacher Opportunities to Promote Science (TOPS) program, will allow students to learn about technology in general and radio waves in particular, study for their ham licenses, and take field trips to see scientists at work.

The project is tied into scientific work at Los Alamos. Cowan's mentor there is Don Casperson, AA5PA, an ARRL Life Member who has volunteered his technical expertise. The Santa Cruz Amateur Radio Club also is assisting. Cowan says the community could benefit from having more youthful ham operators to help with emergency communications, since Pajaro is near an earthquake zone.

This year's ARRL Professional Teacher of the Year, Bob Lavin, K6BOB, of Calabasas, California, got $3,000 from his school's parent-teacher organization earlier this year to purchase a ham radio station. He has integrated ham radio into his classes, and 30 students and teachers now hold Technician or Tech Plus tickets.

For those who wish their school had a ham radio station and activities for kids, ARRL Educational Activities Manager Rosalie White, WA1STO, offers some suggestions. "Ask around to learn who're the innovative teachers in your district, and offer a hands-on geography or science lesson," she suggests. "Or get yourself invited to help students take part in the School Club Roundup (see January QST)."

White says hams also might check with their employers or with other local industries to learn if funding for educational projects is available. "Companies prefer to see funding go toward training their potential future employees," she said. "You can also do an Internet search on foundations and grants, and read QST's 'At the Foundation' for occasional stories about school-garnered mini-grants."

Getting grant money from various sources to fund Amateur Radio activities in the school is not a new idea, but it's one White says more teachers should explore. In 1995, four different grants gave teacher

Sheila Perry, N0UOP, $155,000 for her school district. The money funded curriculum development, Amateur Radio equipment, electronic kits, a computer lab and other items.

Teachers interested in learning more about how to write grant proposals should read "A Trip Through the Teaching Universe," by Connie Dunn, KB5LES, QST, June 1995, p 44 or visit ARRLWeb, http://www.arrl.org/ead/teacher/perry.html.

NOMINATIONS OPEN FOR MAXIM MEMORIAL AWARD

Nominations are open for the Hiram Percy Maxim Memorial Award. The award goes each year to a radio amateur under the age of 21 whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities. These include, but are not limited to:

* Participation or leadership in organizational affairs at the local or national level.
* Technical achievement.
* Operating record.
* Recruitment and training of new amateurs.
* Public relations activities.

In keeping with the tradition of the award when it was first established in 1936, formal nominations are made by Section Managers. Supporting information, including the endorsement of ARRL-affiliated clubs and elected or appointed League Leadership officials, should be submitted with the nomination. An award panel will review the nominations received and select the winner. The prize consists of a cash award of $1000, a suitably engraved plaque, and travel and accommodation expenses to enable the winner to attend an ARRL convention for a formal presentation.

Nominations should document as thoroughly as possible the Amateur Radio achievements and contributions of the nominee during the previous calendar year. Additional information concerning the character of the nominee should be as complete as possible.

The award is intended to provide a tangible reward to those deserving young amateurs who contribute their time, skills and energies daily through their commitment to Amateur Radio. As models for their peers, and inspirations to us all, these fine young people are highly visible boosters of Amateur Radio awareness. We must continue to recognize and encourage their hard work and contributions at every opportunity.

Nominations must be sent to the Section Manager. Nominations must be received at Headquarters from Section Managers by March 31, 1999. There is no limit to the number of nominations one may make.

Sixteen-year-old Antone "Tony" Duarte, N1XRS, of Dartmouth, Massachusetts, was the 1997 Hiram Percy Maxim Memorial Award winner.

For more information and an application form, contact ARRL Field Services Manager Rick Palm, K1CE, e-mail rpalm@arrl.org or write him at ARRL Headquarters, 225 Main St, Newington, CT 06111.

SHORE STATION PCH SCHEDULES "FAREWELL DAY" EVENT

The longest established maritime radio service in the world--Scheveningen Radio, PCH, in the Netherlands--closes for good January 1, 1999. To mark the sad occasion, PCH will hold a "Farewell Day" special event later this month--on its 94th anniversary and has invited hams worldwide to participate. But there's a fly in the ointment for US hams!

The idea is for hams to contact either special event station PA6PCH (from the Radio Club Kennemerland station, PI4RCK), which will be active on 2 and 75 meters, or PCH itself on crossband. But that latter possibility--actually working PCH--should raise a warning flag to US hams. Lacking specific FCC authority, it's strictly illegal for US amateurs to communicate with a station operating in another radio service. Section 97.111(a)(4) in Part 97 of the FCC rules makes an exception only for Armed Forces Day contacts.

Here are the details for the PCH special event: Starting at 0800 UTC December 19, 1998, and continuing through 0800 UTC December 20, PA6PCH will operate on 75 meters, 3687 kHz, as well as on 2 meters, 144.315 MHz, SSB.

In addition, for stations whose countries authorize such operation: PCH will operate from 1500 UTC on December 19 until 0700 UTC on December 20 making crossband CW contacts with amateurs on the following PCH transmit/receive pairs (plus or minus QRM on the amateur bands): 4250/3525 kHz; 8622/7025 kHz; 12799.5/14050 kHz; 17198.9/18085 kHz.

This event has been approved by the Dutch Radiocommunications Agency for participation by hams in the Netherlands. However, it has not been approved by the FCC for participation by US amateurs, and such operation may be similarly prohibited in other countries as well.--Scheveningen Radio/PCH news release

SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV Seattle, Washington, reports: Solar activity was lower this week, with both average solar flux and sunspot numbers down about 10 points each when compared to the previous week. Average solar flux for the previous 90 days was 131, and solar flux was above this value on every day, indicating a good general upward trend.

Solar flux peaked at 162 on December 8, and the trend now is downward. For the ARRL 10-Meter Contest, look for a solar flux of 132, 128 and 122 December 11-13. Geomagnetic indices should be unsettled to active, with the planetary A index peaking around 15 on December 12.

It would be nice to have a higher solar flux for the ARRL 10-Meter Contest, but contesters can look forward to much better conditions than last year. Last year the Friday through Sunday solar flux for the 1997 ARRL 10-Meter Contest was 92.5, 89.3 and 90. This just wasn't enough for good propagation over most paths. Just plug the numbers into any popular propagation prediction program, and the predicted numbers for this weekend look great in comparison.

The general trend in solar activity has been up this year. Take a look at the chart at http://www.dxlc.com/solar/ or at http://www.wm7d.net/hamradio/solar and see the general upward trend. Beyond this weekend look for solar flux to drop to 120 or lower by December 16, then rise above 130 three days later and above 140 by December 22. Flux values are expected to peak above 150 around December 27.

NASA released an interesting story this week about solar wind squeezing ions out of the ionosphere. See the press release and images at http://www-spof.gsfc.nasa.gov/istp/news/9812.

Sunspot numbers for December 3 through 9 were 136, 109, 91, 106, 143, 158, and 132 with a mean of 125. The 10.7-cm flux was 153.1, 148.2, 142.4, 142.3, 153.2, 162, and 153.9, with a mean of 150.7. The estimated planetary A indices were 7, 7, 12, 7, 6, 5 and 5, with a mean of 7.

Here are some path projections for the ARRL 10-Meter Contest this weekend:

Look for Europe from the East Coast around 1530-1700 UTC, South America with strong signals around 1430-1930 UTC, South Pacific around 1800-2200 UTC, Hawaii around 1800-2030 UTC, and the West Coast from 1800-1930 UTC.

From the Central USA, look for Europe around 1600 UTC, South America from 1500-2100 UTC, South Pacific at 1730-2330 UTC, Hawaii from 1800-2300 UTC, Japan around 2200-2300 UTC, the East Coast around 1800-2000 UTC and the West Coast from 1700-2100 UTC.

From the West Coast, check South America around 1530-2330 UTC, South Pacific around 1830-0030 UTC, Hawaii around 2000-2100 UTC, and Japan around 2230-0000 UTC.

IN BRIEF:

* This weekend on the radio: The ARRL 10-Meter Contest and the Great Colorado Snowshoe Run are the weekend of December 12-13. Complete rules for the ARRL 10-Meter Contest appear in November QST, page 108. Just ahead: The Croatian CW Contest is December 19-20; the Stew Perry Topband Distance Challenge and the RAC Winter Contest are December 26-27. See December QST, page 95, for details.

* Vanity update: The FCC in Gettysburg reports it has processed vanity call sign applications received through November 20. In the most recent run, December 9, the FCC granted 213 applications while another 187 landed in the work-in-process (WIPs) stack for further processing.--FCC

* Mary Lou Brown, NM7N, memorial service set: A brief memorial service for the late ARRL Northwestern Division Director Mary Lou Brown, NM7N, will be held Thursday, December 17, at 2 PM PST, at Guemes Island Road Community Church. Among those expressing sadness at the sudden death of Director Brown on December 3 was Radio Amateurs of Canada President J. Farrell "Hoppy" Hopwood, VE7RD, who called her "a special friend of Radio Amateurs of Canada" who was "always most generous in assisting RAC."--thanks to W7AGQ and VE7RD

* Sugrue named Wireless chief: Thomas J. Sugrue has been named chief of the FCC's Wireless Telecommunications Bureau, effective January 19. The WTB oversees Amateur Radio at the FCC. A communications lawyer in private practice since 1995, Sugrue has previous FCC experience as chief of the Policy and Program Planning Division in the FCC's Common Carrier Bureau and as special council for competitive policies. He later spent six years as deputy assistant secretary of Commerce in the National Telecommunications and Information Administration and twice served as acting NTIA administrator. Sugrue replaces Dan Phythyon as WTB chief. He's a graduate of Harvard Law School and also holds a master's in public policy from Harvard and a BS in physics from Boston College.--FCC

* CW in the cinema: Several ham-moviegoers have alerted ARRL HQ that the movie "Enemy of the State" contains a snatch of CW. In scenes depicting a spy satellite, the sound track includes a little Morse code: The satellite calls CQ! "As though pictures were sent from satellites by Morse, said Tom Bradbury, NU4G, who saw the movie in November with his daughter, Elizabeth, KE4IWN. "I broke out laughing, no doubt to the puzzlement of those around me," he said. "Somewhere in moviedom is a chuckling ham, I guess." Steve Kaufman, VE2SKA/KB2SPH, says that characters in the movie also use what appears to be a Yaesu HF transceiver to break into police frequencies. "The frequency shown is in the 40-meter band," he says, "but they do speak to the police dispatcher." The movie stars Will Smith and Gene Hackman.--thanks to Daniel Coates, N9XJF, Steve Kaufman, VE2SKA/KB2SPH, and Tom Bradbury, NU4G

* Strange signal: ARRL HQ received a number of complaints during November--mostly from hams in Maine--about a very strong pulse-type signal between 3910-3950 kHz. The signal, which was S9+ at W1AW, was reported to the FCC, which listened for it for more than two weeks from their monitoring facility in Columbia, Maryland. The FCC also heard the pulse-type interference faintly on several days, but only well enough to determine the signal was coming from the north. The FCC heard nothing from November 28 to December 6 and then closed the case. The ARRL has not received any more complaints, but the FCC said it would be glad to reopen the case if the interference resurfaces.--thanks to John Hennessee, N1KB

* Sputnik telemetry software: Hank Riley, N1LTV, has written a compact Windows-based program called Sputnik Telemetry Assistant that interprets audio frequencies measured from the Sputnik-41 transmissions and uses it to calculate the satellite's onboard temperature. The program is only 8

kB and runs under Windows 3.x and higher. See the High Altitude Balloon Launch Information Center Web site, http://www.geocities.com/capecanaveral/3161/hablic.htm and look for it in the "Download Special" section near the end of the home page. Riley welcomes comments at h1riley@umassd.edu.--AMSAT News Service

* ARRL Members Only Web Site a hit: Since it went on-line earlier this fall, the ARRL Members Only Web Site (http://www.arrl.org/members/) has topped the 30,000 mark for members registered to use it. During the last 10 days of November, nearly 7000 members visited the Web site. The site provides access to The ARRLWeb Extra, a new Web publication that contains current news and Amateur Radio features, as well as to past QST product reviews and other services and information. ARRL members also may sign up for free e-mail delivery of The ARRL Letter and W1AW bulletins and update their name, address, and call sign information with the League via the Members Only Web Site.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask

individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

If Radio Shack was smart, they would start up the production line on a new 10 Meter mobile rig, so would Uniden and several other companies that used to be big players in making 10 meter mobile rigs, now that 10 is opening up again and more and more people will be wanting to get on this great band. Only this time, Radio Shack should actually think before they make a 10 meter unit based upon what a piece of sh-t the HTX 101 was.

Carl, this topic has of course been beaten to death, but I'm curious what is it exactly that the no-coders want? I mean it seems to me that all the HOT new technology would be going on above 50Mhz where we have some bandwidth and room to play, of course the no-code tech has access to ALL these frequencys and can run any mode an Extra class ham can.
Are we REALLY keeping people out of the hobby because they want to work HF and must learn code to do it?

Is the no-code Tech license not enough? If we gave HF privileges to no code techs (which is fine with me by the way) in what way does that bring amateur radio into the 21st century?

My guess is that the comparison to buggy whip manufactures is to date the technology level of ham radio today. In other words, at one time there were buggy whip manufactures in every town, since everyone rode in horse driven buggies they were very much in demand, one day the technology changed and we all started driving cars. Tough to find a good buggy whip maker these days.

I believe it can be paraphrased like this. While morse code at one time was very very useful the technology has changed so it's value is not as great. Not unlike buggy whip manufactures, who were at one time very much in demand but when your F150 Pick up breaks down, knowing a buggy whip maker doesn't do you much good.

With apologies to Gary if needed,

NOWHERE in 97.1 ("Basis and Purpose) does it say Morse is essential.
In fact, there is no mention of Morse whatsoever in 97.1.

No, not nearly enough ...

> If we gave HF privileges to no code techs
>(which is fine with me by the way) in what way does that bring amateur radio
into
>the 21st century?
```

It's not just the existing technicans, though many of them are highly skilled technical experts who could contribute greatly ... it's the folks who won't join our ranks because they refuse to be "second-class citizens" on the basis of a lack of interest in technical antiques.

I understand, but I heard the same argument for the no code technician, there was going to be a flood of all these wonderful engineers who could do so much with ATV, Microwave, digital modes, etc. if only we would drop the silly code, well we did now where are they? I must have missed the big technical flood of '85 or whenever we dropped the code requirement.

I personally don't care if you want to grant HF privileges to all with no code testing, but the argument that it's somehow will better the hobby by attracting more technical experts is tough for me to believe. I didn't happen the first time around, what makes you think it will happen just because you grant them HF?

5069. F.C.C. Taking Names for Enforcement Activities

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-11 00:00:00 UTC
From: w4th@webtv.net
Message-ID: <11489-3671F244-9@newsd-172.iap.bryant.webtv.net>
Source record: 155850

FCC Enforcement Chief Done "Taking Names"
WASHINGTON, DC, Dec 10, 1998--The FCC's Riley Hollingsworth, K4ZDH, is making his list and checking it twice. And now that he knows which hams are naughty, not nice, he's ready to take enforcement actions against the most flagrant amateur offenders he's been able to identify to date. "Fully half of the amateur problems on HF relate to a specific group of jammers--malicious interferers who apparently enjoy disrupting as much amateur communication as possible," said Hollingsworth, the FCC's point man for amateur enforcement within the Compliance and Information Bureau. "Enforcement action against this group is long overdue."
Coal could be showing up in some Christmas stockings. Hollingsworth has prepared a report to his boss, CIB Chief Richard D. Lee, detailing his findings and fingering the most serious violators in a "top 10" list which he declined to make public just yet. His memo urged "immediate enforcement action."
Hollingsworth said he's talked with more than 250 people on the amateur enforcement line (202-418-1184) since the end of September, when the FCC's latest amateur enforcement initiative kicked into high gear. In addition, he has received more than four dozen letters and e-mailed comments concerning problems in the Amateur Service. Hollingsworth has concluded that, while most amateurs abide by the rules, a few habitual offenders continue to flout the law.
"We are not going to stand for the Amateur Service to be further degraded or destroyed by them," he said, rising to a level of indignation comparable to that of the hams who've been calling his enforcement line. "These people don't realize that they are an international embarrassment."
Hollingsworth says that jamming and deliberate interference is the most common problem, accounting for 31% of all complaints. Repeater misuse and jamming account for another 29%. But he considers the HF abuses--most typically reported on 75 and 20 meters--to be the more serious offenses because they can be national or international in scope. Other general problems such as single instances of jamming, use of obscene language, unauthorized use of call signs, operation beyond license class and poor operating practices accounted for another 17% of the complaints, Hollingsworth said.
A full 10% of complaints concerned an unlicensed individual in California who already has spent time in jail for past convictions. Hollingsworth has sent out 30 informal "warning letters" to individual operators as a result of complaints, "to let the licensee public know we are out there," he said. Hollingsworth said he typically uses the warning letters in situations where there appear to be specific bona fide complaints that are not sufficiently serious to warrant immediate enforcement action, but sometimes they also go to the more serious

apparent violators. The letters warn the recipients that a complaint has been received about the recipient or someone using his or her call sign, indicate that the allegations--if true--could jeopardize the amateur's license, and request the recipient to contact the FCC to discuss the matter.

"In almost every case the recipient has contacted us," he said. "In one case, the licensee contacted us, apologized, and reports since that time indicate that the licensee has become a model operator." Hollingsworth conceded that in a couple of instances the letters had just the opposite effect and made a bad situation worse. Some amateurs have reported to the ARRL that amateur behavior has improved--dramatically in some areas--since word hit the street that the FCC was taking amateur enforcement seriously. For its part, the League has backed away for now from its request to further privatize amateur enforcement.

Hollingsworth says the warning letters will continue, but now he's taking aim at the hard-core scofflaws within the Amateur Radio community. "We have now let everyone out there know we're back," he said. Continued violations will "guarantee" license revocations, fines, or--in extreme cases--equipment seizures.

"Church is out now," he said. "We mean business and we're strapped in and ready to ride." Hollingsworth said Amateur Radio rulebreakers "continue these violations at their own risk."

5070. Warren Gregorie TR2000 Boom Mike Headset and Icom Compatibility

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-11 00:00:00 UTC
From: w4th@webtv.net
Message-ID: <11486-3671F7DC-82@newsd-172.iap.bryant.webtv.net>
Source record: 155851

I have recently seen in QST a headset model TR2000 from The Warren Gregorie Co. The price is very reasonable compared with the Heil headset most everyone else uses. Their web page also features a foot switch. If you have any experience with the TR2000, especially with an Icom 756 or similar Icom rig, please commnet on it. I am considering buying one, If they sound good with the Icoms. A friend of mine had bought one of the new Icom preamps for the Heil headset, and it really sounded lousy, so I dont want to go with a Heil headset. I hope since the TR2000 uses a electret mike element like the Icom mikes use, that they will sound better on the Icom than the Heil mikes sound. Just a thought, but if you run a TR2000 on a Icom please let me know how well it works...73...Merry christmas....and
Thanks !!

>It exists, as do other radio
>services, to serve the "public's interest, convenience, and necessity"
>according to the legislation under which it is governed, ie the
>Communications Act of 1934 as amended. It has a set of defined
>goals set forth in 97.1. If amateur radio fails to deliver on its
objectives,
>then its existence as a federally chartered radio service is imperiled.
>In other words, we've been granted use of some very valuable public
>resources, if we don't show that we are making productive use of
>them in the public interest, then we will lose those resources to others
>who will.

Boy that sounds nice, but it's sure not todays reality. It's a joke to even call the hobby a service. Tune across the bands any time. 99% hobby. Tune to those special garbage frequencies...a service..hah. The FCC knows what is going on. It's been going on since the 60's or earlier. Remember the WESTCARS (West Coast Amateur Radio Service) fiasco on 40 meters in the 60's? They're not going to take away ham radio because of what that old law says, because we've been violating it bigtime for decades, and they even gave us *more* HF frequencies....

>Historically, amateur radio's reserve pool has been
>tapped in times of disaster and national emergency (ie war) as a ready
>source of skilled operators and technicians to augment regular public
>communications assets. In so doing, it has served the public interest
>and necessity by augmenting civil and military radio communications
>in time of need.

There you go again. Talking ancient history. Do you really think our present ham population could be of any real use to the modern military? Skilled operators?? On what, how to keep the frequency clear of hecklers?

>The majority of then licensed amateurs served in WWI, and a large number
>of then licensed amateurs served in WWII. Most were able to do so with
>very little additional training in radio communications. They provided
great
>benefit to the nation.

One of the things the hams brought to the WW2 military was CW proficiency. CW of course is as ancient for todays military, as the old regulations are for today's ham hobby...

>One of the objectives of licensing reform is to attempt to reshape the
amateur
>radio service in such a fashion that it will have a return to relevancy in
regard

>to its chartered duties to the public interest.

Well if you insist on the return to ancient regulations to justify your get everybody to be a whizkid philosophy, then to be consistant you also need to keep the ancient mode of CW on the test also...

You technical whiz'es just don't get it. Not every ham hobbiest wants to be technical. The kind of technical skills needed to get the relevent skills the military or government needs would take several years of college. If you make a *real* test for that technical level, the applicants will drastically drop and then you *will* lose bands.... (no political power)

>how does a Morse testing requirement serve the public interest,
convenience,
>or necessity today

I'm the public. CW serves my hobby interests. And being a tradition of ham radio, it's a natural people weeder for the test...

>technical skills, we see a shortage which requires us to depend on foreign
labor
>to meet demand. So it makes sense to refocus amateur radio away from Morse
>and toward more relevant modern skills.

Our current economy is responsible for our present full employment. In the early 90's when the electronics companies were laying off, thousands of electrical engineers and techs were on the streets. This current bull market won't last forever...

>Another objective of licensing reform is to aid us in altering the
demographics of
>amateur radio. Amateur radio has changed from a young man's pursuit to a
mostly
>retirement activity today. It doesn't serve the public interest very well
to train people
>nearing the end of their lives.

Ah but it's a great hobby for old guys. You don't think many of us retired guys are busy being trained do you? Well maybe reading that instruction manual that came with the new rig, or TNC....

>Reforming licensing won't turn things around by itself. It just enables us
to turn
>things around if we are willing to do so. If we, current amateurs, don't
accept
>the challenge to recruit new (and younger) amateurs, to elmer them in
relevant
>techniques (which requires that first *we* get up to speed on modern
techniques),
>and to vigorously serve as role models, then all the licensing reform in
the world
>won't alter amateur radio's slide into the grave.

Pie in the sky. Make the test harder to get more kids. Makes real sense. The kid can do anything with his computer that most hams do, learning as he goes. But you're going to make him learn the equivilent of a couple years of college to pass your *real* techie test, before he can even get on the air. Right.

>Our demographics say we have only a little more than a decade to stave off
>the Grim Reaper from sharply diminishing the ranks of amateur radio. I frankly
>don't know if enough of us can rise to the challenge, but I'm sure that we can't
>while saddled with regulations out of the Dark Ages.

Regulations of the dark ages? That sounds a little different from the revered goals and policy regulations of the service you referred to in your starting paragraph.....

>But it is wrong to insist that
>*everyone* demonstrate a facility with an anachronism merely because some
>of us may find its use "fun" or "challenging".
>Gary Coffman KE4ZV

Now I agree with you. Just because you find the technical side of the hobby to be fun or challenging, why should all hams be made to bring themselves up to your engineering standards.

There is only one way to save our hobby. That is more people. And a *real* engineering test surely won't do that. The people in control realize it (ARRL, W5YI, ham mfg's ect.) and fight to see too it that the numbers don't dwindle. The ham radio of old is mostly gone, and when the rest of the oldtimers die off it will be. Whether you like it or not, the hams of the next century will be less technical, (excluding those in the biz of course) not more. The trend has been that way for a long time and you can complain, but not reverse it. The CW test will surely go away in the next few years so at least that will give you a little satisfaction. Get ready for the 21st century and the communicator/weekend project ham. I for one don't see that as bad. Just a *hobby* where everybody gets to do their own thing. Similar to today, only less technical snobbery....

>Carl R. Stevenson

You have to look at it in the context of the time. CW was essential then for many reasons. Provide ops for the military and government. Copy distress sigs, ect. The license required CW in those days for those very valid reasons. I agree those reasons don't exist today. The CW test today is used as a test weeder. Some may cry tradition, but in reality it keeps out the unwashed. Present company excepted of course....

I'm not sure about bringing amateur radio into the new century, but the Tech HF CW idea may save CW, (as the old guys die off) by bringing in new blood *voluntarily*. However if they make the General exam easier, and the Tech's upgrade quickly before becoming proficient on CW, we may never see them again anyway. Easy come easy go....

>Tim, ka8ddz

CW has much value to the CW hobbyist. The antique buggy collector probably would give his left xxx for a good buggy whip. And the broken down F150 pickup owner would probably prefer a modern cell phone...

Suggesting that it be sent by Morse is just as ridiculous suggesting
one send it by speech on SSB. But I dare say that Morse would be
faster than phone in that case.

>Morse code sends a little information in a narrow bandwidth. By modern
>information system standards, it is obsolete and inefficient.

For the application you mentioned, so is phone. But I bet you still
use a mic on your hip-mounted HT.

>I have worked for 20 years on a variety of military C3I systems, none of
>which use Morse code.

You were in the wrong branch of the service, then. But comparing ham
radio to the military is also ridiculous. The have a much larger budget
than all of us put together, their mission is very different, their
communications are not recreationally oriented, they don't work DX
for fun, do moonbounce and meteor shower for fun, have antenna
measuring contests, have on-the-air contests, build their own QRP
gear purposely using as few components as possible, have antenna
raising parties, yack on V/UHF repeaters, build repeaters that
duplicate coverage of existing repeaters just for ego sake, plus
hundreds of other things that we do but they don't.

>My opinion is that a portion of each band be reserved for CW, but that

I have a 9100, as well as a newer Toshiba phone based on what appears
to be the same radio. I looked at the output of the telephone on a
spectrum analyzer, as well as looked at the radio deck. The 9100
uses a Motorola MC3418 CVSD chip for analog-to-digital conversion,
and the resulting data stream (something between 30 and 40 kbits/s)
is sent using wideband direct-FSK. RF carrier and LO signals are
synthesized, apparently using a 150KHz reference frequency (judging
from the channel step and apparent reference-feedthrough spurs).

The resulting signal is over 100KHz wide, most NBFM receivers (scanners)
won't notice this at all, though an RSSI circuit (S-meter) may indicate
the presence of a signal.

Technically speaking, this is not a spread-spectrum signal, it is
really just a wideband FM digital radio, and it most certainly does
not appear to be encrypted. If you were clever, you could buy an
MC3418 chip and build a decoder, along with a wideband FM receiver.
Practically speaking, it does make the telephone virtually impossible
to intercept.

Using a spectrum analyzer, I'm certain I counted 10 channels,
and the telephone manual/box might even specify 10 channels.

I previously posted that the channel step was 150KHz, and I
recall now that it may have been 300KHz, but the synthesizer
operates with a 150KHz reference. Now that I think about
it, I'm pretty sure this is correct. While I did not record
the actual frequencies, I'm fairly certain they're on a 50KHz
boundary and step by 300KHz.

Hi, I'm looking for information on where I can get the best price on the PC cloning cable which is compatible with the newer ICOM/YAESU line of radios (VX-1R, Q7A, W32A, etc.) Icom calls it the OPC-478, YAESU has it bundled in a software package. So does anyone know who has the best price on this PC Cable? I don't need any of the software, only the cable itself. Or, you *YOU* have one you'd want to sell me, also let me know. Either way, please respond via email. Thanks alot!

Today ham radio is not the thing anyone looks up to for life and death situations. Everyone today is armed with a cell phone. The days of Mr. Joe Ham coming along with his amaziing two way radio is long gone. If you ever stopped to help an old lady on the side of the road with your two meter radio she would more than likely tell you what you could do with that silly sqawk box that keeps on sending dits and dahs. Dont bother stopping unless you want to change the flat.

Every now and again, you read about a city health department somewhere
raiding a home because a person has fifty dogs living inside with them. I
guess he can be at least complimented for choosing to collect something that
doesn't pose an immediate health hazzard to the neighbors. QRM would be
something else, however.

Slow Dance Have you ever watched kids on a merry-go-round? Or listened to the rain slapping on the ground? Ever followed a butterfly's erratic flight Or gazed at the sun into the fading night? You better slow down Don't dance so fast Time is short The music won't last Do you run through each day on the fly When you ask "How are you?" Do you hear the reply? When the day is done, do you lie in your bed With the next hundred chores running through your head? You'd better slow down Don't dance so fast Time is short The music won't last Ever told your child, We'll do it tomorrow And in your haste, not see his sorrow? Ever lost touch, Let a good friendship die 'Cause you never had time to call and say "Hi"? You'd better slow down Don't dance so fast Time is short The music won't last When you run so fast to get somewhere You miss half the fun of getting there When you worry and hurry through your day, It is like an unopened gift.... Thrown away... Life is not a race. Do take it slower Hear the music Before the song is over.

I think you're giving the 50 a bad rap. I have a 50 that I carry almost every day. So far, I've carried it for over 2 years through any weather (lots of rain). The 50 has never skipped a beat. The original 3-year-old 5 watt battery pak still performs quite well (prob 80%). The FT50 has some of the best wideband receive of any handheld. Older FT50s had even better wideband (no gaps). The audio output rivals Motorola Sabers. The antenna's probably 8 inches and the radio about 7. The only real known problem is the voice-mail system- it won't play back the right thing, but it's useless even if it did work. Furthermore, it encodes and decodes both CTCSS and DCS. DCS isn't possible on many radios- even the 580. I love my FT50 and would probably kill anyone who tried to take it from me. The display is very clear from all angles (unless you want to talk about 91-180 degrees ;-) You can set the radio to 5, 2.5, 1, and 0.1 watts with the FNB-41 5Watt 9.6VDC pack, and approx. 2.5, 1.5, 1, and 0.1 with the 2.5Watt pack. Furthermore, if you go pull the diode to get to the service menu, you can use a wattmeter and adjust the above settings to anything you want. Granted, the radio won't crossband, and it can't dual in-band receive- but how important are those features to you? Furthermore, my 50 tx's 120-250MHz and 350-520MHz- SWR and power out aren't great (down to about .5 watts at high on both edges) but that's not too shabby for what it is. The radio is also very small- much smaller than any other radios mentioned- the smallest radio in it's performance class. Also, the 50 was the first milspecced radio- which at least the 530, 580, the 51 I think, and probably the W2A. The W2 is supposed to be pathetic- low power out as well as many problems. The 580 has only 20 memory channels and no alpha, while the 50 has 100 with alpha. The 50 can scan at +30cps. The only comparator to the 50 is the G7A Kenwood.

Just my $0.04 ;-)

>> "I wanna hear him TALK TOUGH!!"

And what exactly do you dispute with regards to this statement, OYEster? Who else do you know, besides retired folks looking for a few extra bucks to supplement their Social Security checks (which I have no problem with, BTW), who possess knowledge about radio and electronics, and who are willing to tolerate Radio Shack's poverty wages and dehumanizing "corporate knows best" attitude for any length of time?

Answer, please, OYEster. Don't change the subject or twist the question like you usually do.

>violations of FCC regulations with regard to amateur radio? That could
>be it (very plausible reason at that).

Not likely, OYEster. Are you stating that I have been issued a NAL? If so, you are guilty of libel, since this has never occurred. Bringing you up to speed here, OYEster...what happened is that your buddy Hanoi Dan tried to TALK TOUGH and shot his mouth off about that which would never happen. When I called him on it repeatedly, asked him to explain himself, he chose to duck the question. I will continue to ask the question until he gives me an explanation.

From: Stu Olson <solson@usa.net>
Message-ID: <74vf4c$q1r$1@holly.prod.itd.earthlink.net>
Source record: 155776

VoiceKeyExpress version 1.3.0 is now available for download at:

http://home.earthlink.net/~n7qjp

Included in this release is support for those using the FT-Manager CAT software. Now FT-Manager and VKE can share the same interface.

By popular demand, the European 1 minute meteor scatter timing interval has also been added to this release. You can now select from either the North American 15 second or European 1 minute transmit interval.

To those of you who have dropped a note.....Thanks!

Merry Christmas.....Stu Olson N7QJP

As a no-code tech who has spent the past couple of months trying to learn code at age 50, Carl Stevenson is most eloquent. I want to be able to use voice at 10 meters and below because I like to travel/camp in very primitive, remote areas of Baja (when I'm not putting in 12 hour days as the software manager for the Global Hawk UAV) and the southwest. This communication would add to both the fun and safety of being able to communicate BVR if needed or desired.

I frankly doubt I will ever learn code well enough to get a general, it is difficult for a semi old timer, especially when it seems such an artificial requirement, redunant and antiquated in this ERA.

Global Hawk (see www.tdyryan.com) has LOS (line of sight) and SATCOM channels for control and data that run between 9600 bps and 150kbps. None of these support code. Voice is the slowest link in use.

As I said, I'm trying to learn code so I can use the lower voice bands. I doubt I'll make it though (unless the alphabet is limited to A, C, E, H, O, T). The loss is to manufacturers of the equipment and to the hobby. If I don't/can't use it, I sure don't feel inclined to protect a bandwidth being usurped for another purpose.

I say reserve bandwidth for CW for those who want to use it for that purpose, but allow the rest of us to use other parts of the bands for voice.

Excuse me? How do you figure that? 100 of 175 khz is used generally for
HIGH SPEED CW anyway... so you would dumb down the entire license class
making it as worthless as used toilet paper so lazy slobs who cannot be
bothered to apply themselves can get those last 75khz????

You work for the public schools, don't you?

I agree... how is the denial of 175 khz out of the HUNDREDS or THOUSANDS of MHz of amateur spectrum going to kill amateur radio?

I said it years ago... I will say it again... When the nocoders were whining and crying for their no code license I asked if anyone REALLY believed that was all they were going to stop at? Nope. I said they would not rest until Amateur Extra was a no code license. This entire issue is just one more step towards that goal.

There is ZERO reason to reduce the requirements for Amateur Extra one bit... AT ALL.

If you want Amateur Extra class, you learn code at 20wpm... that simple.

And considering that over half of the 175 khz of extra freqs are used generally for HIGH SPEED CW I do not think this is unreasonable.

I think it is the whining nocoders who prove again that it is THEY who are unreasonable.

I've made typos, failed to proofread, made *grammar* and spelling mistakes in
the past, and yes, criticized others for doing the same, so far be it from me
to call myself perfect.

But did you happen to read how deplorable your own writing is?

5122. FT8100 and ADMS-2D connection problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-12 00:00:00 UTC
From: Mike R <+++mruane@itl.co.nz+++>
Message-ID: <913438297.997244@news.iconz.co.nz>
Source record: 155870

Can anyone help with this problem. When I try to create a template the FT8100 just displays Err --- Err (after starting in Clone mode and pressing the RPT key). No data transfer occurs. I know the com port is OK because I use it to control another transceiver. Have I missed something important.

Cheers Mike ZL2GC

You are right. RS does NOT make something that they cannot make any
profits. ... At least a lot of hams do NOT buy 10m only rigs...
whatever. They don't buy new rigs nowadays so ham stores are
collapsing and interests for ham radio are declining... and yet say RS
should make 10m rig... GET A LIFE.

Hi All,
I'd like to find schematic diagram of Icom OPC-646 programming interface for mobile radio, like IC-2710, IC-207H etc. Anybody who has ANY information about OPC-646, please let me know!
Igor UN7GM

This is a very well written article. But where did it come from? Where does it appear? Who wrote the article?

As you know, this IS the internet....where ANY rumor can get started. I'm still skeptical the FCC is going to do anything since its #1 violations expert, WB2OTK, is still present on the bands.

B.E.

<13017-36712623-12@newsd-173.iap.bryant.webtv.net>...
I need some help. I have an Icom 756 that is like new that a fellow wants to trade me a Kenwood 870 for. I have always wanted an 870, but I sure do like the 756. I dont care anything about 6 mtrs, but I am more concerned with the difference in receive between the two rigs. I would especially like to hear from people that have owned both rigs and can tell me which they thought was the better rig. I am looking for a rig to keep as my own personal rig, and not to make a buck off of. I know the 870 is the more expenseve of the two. but like I say, I am more interested in which one is the better rig, and not which one cost the most, or has the most features....Thanks for your help.
Tom Hix
W4TH

My $.02 says take the '870. The '756 is nice, and I am a big Icom fan, having owned lots of their stuff. The 870, however, has better received and transmitted audio. Just listen to the two side by side and the received audio quality couldn't be more apparent. Anyone who says otherwise has not done this test.

If you are into DX work, you can get much more audio punch from the '870 and can work with a wider variety of mikes without modifying the rig. The '870's DSP is a bit more effective in both receive and transmit (not sure if the 756 even uses DSP in transmit)

And if you like to fool around with rig control, the 870 has a DB-9 jack right on the back...just connect a serial cable between your PC and the 870 and go to town.

When I took my General exam at the FCC office in Detroit (way before the days of VEs) I was waiting for the rest of the people I'd rode with to finish in the front lobby. Another guy came out and started commenting to his friend about the test afer having passed it. His friend said, "To hell with that test. You don't have to know anything on it anymore, and you don't have to work code. You already passed the test, so you can forget everything you studied for."

This was the attitude back then, and it's even more so now. A license restructure isn't going to change it. An 8-year-old could pass the written part of the tests, right up to and including Extra class.

Any and all information on the Yaesu FT-50RD 5 watt talkie would be greatly appreciated. I am considering getting one for a gift and really know zero about them. How reliable are they? Any well known problems? Audio quality? Ease of use? Display clarity? Can the 5 watt model be set to a lower output? How high is the rig with the antenna attached? Most important, would you buy another one for a friend or loved one??? I sure would be grateful for some help on this!

more
>technical experts is tough for me to believe. I didn't happen the first time
around,
>what makes you think it will happen just because you grant them HF?

Because I *know* many of them who refuse to become "second-class citizens."

HF is attractive and useful, both as a place to experiment with new techniques
which could benefit ALL HF operators ... things that simply can't be done in the
very different propagation environment of VHF and up ... and also as a means
for scattered groups of individuals to communicate to facilitate collaboration
on
projects.

Just as your average cardiac surgeon would get upset at an orderly or nurse's
aide copping and attitude and trying to tell him that he "wasn't qualified" to
enter the patient's room, these folks (who we need and who could teach the
average ham far more than the average ham could imagine) take offense at
the concept that they are somehow "not qualified" to access the "crown jewels"
of ham radio (the HF bands) solely on the basis that they have no interest in
or desire to use Morse.

The insistence that they "must" become Morse proficient to be "qualified"
just makes hams look about as sophisticated as "the Beverly Hillbillies."

>communicate BVR if needed or desired.

Bob ... a Tech+ license will, unless they've changed the rules recently,
get you FULL amateur privileges in Mexico. You need to take your
US license original, passport, tourist card, (and several copies of
each) to the office of SCT (Secretatria de Comunicaciones y Transportes)
in the closest major border town.

If you're in SoCal, the Tiajuana office is (used to be) about a 10 minute ride
from the border crossing ... the major marine suppliers who deal with the
sailboat folks in San Diego will have directions, maps, and details on
current requirements.

Presenting all of your papers, along with payment of a modest fee
(I think it was 60 pesos back when the "new" pesos were 3 to the dollar),
will get you a Mexican license good for the term of your tourist card
(usually six months). Renewals are same drill, and can be done at
SCT HQ in any descent-sized city.

Unless they've changed things, your Mexican call will be XExKKyUUU
where XE indicates Mexico, the lower case x is the Mexican call district
in which your Mexican license was issued, KK is the prefix of your US call,
y is the number from your US call, and UUU is the suffix of your US call.

IOW, they just tack XEx on the front of your US call to indicate you're
"a gringo" ... BUT it's still a MEXICAN license ... your are NOT operating
"portable" under the authority of your US license in any way ... the callsign
format is due to the fact that the XExYYY calls are reserved for Mexican
nationals (and perhaps foreign national who are permanent residents).

The Mexican license will grant your FULL privileges, all bands, all modes.
no sub-band restrictions. (Mexico's regulations are in some areas more
progressive and modern than ours.)

However, be careful to ALWAYS use the XEx prefix when operating from
Mexico ... otherwise you *could* get a pink slip from the FCC for "operating
on frequencies not authorized to a technician plus" ... I got one ... I simply

responded with a polite letter informing them that no violation of FCC rules,
occurred, nor could one possibly have occurred, since the operation in question
occurred outside of their jurisdiction in the territory of another sovereign
nation under the authority of a valid license from that nation. (In other
words,
I politely told them to piss off because they had no authority in the
situation.)

The FT50 is basically an old technology piece of dung. The FT 530, its predicessor is far, far superior. With the FT50, you cannot crossband repeat, no dual in band receive and its one of the worst for intermod. The FT51 is better. Better models by far are: FT 530, FT 51, ICOM IC W2A, Alinco DJ 580 (a real versatile workhorse) and their new DJ G5 TH is great and has less intermod than most. All things considered, stay away from the FT50, its technology is 15 years old. Once you've used dual in band receive, you'll never be without it. You can listen to one repeater or simplex frequency on one side and scan the rest of 2 meters on the other side at the same time. But no can do on the FT50.

Who's calling them second class citizens? I haven't heard that term used EVER with respect to codeless amatures, except from you. Again, it was the same argument when we dropped the first code requirement, I saw no real change to speak of other than a lot of new guys on 2m who didn't know how to cut a dipole. Did you? We were supposed to have a great influx of microwave engineers and the like who were going to bring sooo much to our hobby. I still don't know were they are. I hear lot's of new appliance operators though.

> HF is attractive and useful, both as a place to experiment with new techniques

Awww C'mon Carl I mean I don't have a problem with giving the HF privileges but if it's new technology were talking about is HF certainly isn't where it's happening. As far as coordinating projects the internet seems to work very well. Again, I have no problem with HF privileges for newcommers, but as far as it opening the doors for all these wonderful new engineers who will bring soooo much to our hobby? Nahhh... not gonna happen, wishful thinking, but not gonna happen.

I'd love to see some real data however on what increase of professional engineers joined the hobby after we made 90% of our ham bands available with a code free license.

I can picture what you would act like in person.

You would dominate any conversation.

If someone had a differing opinion from yours, you would probably cut them off
in mid-sentence to re-iterate, probably before they even got two words out.

I wouldn't be surprised if you'd even try to humiliate someone that you didn't
agree with, even if there were other people within earshot.

How right am I?

While that was "an" attitude, you can't say it was "the" attitude, then or now. There has always
been a certain percentage of hams who wanted only to be "communicators", and get a
station on the air. Many others learned enough to build and service at least some of the
gear they used on the air. But all had one thing in common, before the Question Pools:
They had to do a minimal amount of *real* learning to be able to go before the FCC and
pass the required tests. (OK, certain savants who post here may qualify as exceptions).
What was done with the license later was up to them, for their betterment or otherwise.
Today, ability to concentrate in making the proper word associations that match questions
with their previously puslished exact answers make it necessary only to exercise ones
memory capabilities, without necessarily learning a single thing of substance.

I can't see it as being "the same today" at all. You didn't see *any* eight year olds
passing the Extra class exams then.

>this long!

I feel the same way. This is the first time I've seen an undeniable ray of hope for Ham Radio in a long time. If we do our part and become less tolerant of illegal actions by other Hams, it shouldn't take long to clear up a number of problems.

Welcome to the club! As you can see, we have no shortage of idiots,
loudmouths, and self-appointed experts. (You'll have to sort them out
for yourself!) Seroiusly, it's an interesting hobby with nearly
endless sub-sets. By that I mean that if you stay with it, you'll
find some particular part of it fascinating. I got started in this
by listening to shortwave broadcasts of all things. There's still
something about those old vacuum tube radios glowing in the dark,
while dragging in signals from the other side of the globe. Have
fun! After all, that's what this is all about........Ed

Somebody missed the point... I am asking why Bill Pasternak, WA6ITF is always begging for money?? As for a post by Chris Boone, WB5ITT, I do not care about your job title or your credibility, I also have been in Broadcasting in Los Angeles for 30 years. Interesting that you say you pay your end of the 'NEWSLINE' costs...

Again, why then all the announcements for funds or NEWSLINE will go away?? Bill does the work from home and at his work (KTTV TV) for minimal cost.. I ask again, Bill, what or where is all this money going?? You have provided this 'service' for Hams for years. I am curious what has caused this recent tremendous 'overhead'????

> on sunday, 8:00PM and ask if repeaters are unused. there are many
> "professionals" who can ask your qestions.

Sorry Masa, I don't log 2m QSO's and even if I did I wouldn't bother posting them here for you, it really wouldn't matter how many calls I listed, how long the QSO's were or what repeater was being used. No one's going to talk to you anyway. Furthermore, no one's going to prove anything to you anyway, you know it all, you know all about ham radio and that it's dying, and that everyones alone in their shacks punching thier keys. Wouldn't mattter what I said, your not able to comprehend or your simply not interested in listening.
But to clue you in, most of my best QSO's are had on 146.52 Simplex, either mobile to mobile or to someone off the freeway who monitors .52, yes there are times when no one is around, and yes there are times when no one responds on a repeater. So, instead of pissing and moaning about it, I simply try another frequency. I also work guys from Ontario on a regular basis from the Windsor area, which is much smaller in size than Montreal.

No I didn't say I made thousands of QSO's, while traveling from Montreal to Sherbrook I probably made 4 or 5 contacts in the Montreal area and 1 or 2 on the 1 hr trip there. One was with a French Canadian who responded in very broken English but gave me the benefit of the doubt since the call was from the US. That seems to make a difference with the French Canadians both on and off the air.

> tell me what type of QSOs you made. Obviuosly most people are
> french speaking near Sherbrooke. you have fewer chances anyway...
> that is... if you don't speak French.

Well let's see, I usually talk about my station, I remember talking to one truck driver who was also interested in DF'ing and contesting, I talk about things I've built, new modes I've tried and then ask the other station if he does any HF work, or has a particular mode he likes to operate in. Pretty straight forward stuff Masa, of course if you've never done any of these things it makes it tough to talk about them. I try to avoid saying stupid things like "are you alone in your shack punching your key?" You see, stupid, moronic statements like that tend to make the other station QSY or simply stop talking to you. I think this is the crux of your problem Masa

> why not get yourself a girlfriend also and get married so you don't
> have to yak yak yak ???

Actually, I have a very attractive wife of 10 years, quite nice, especially if you like latin women. I'll have some new pix up on the web site after Christmas so you can come

and look at her and wonder how a dink like me can be so lucky. Haw haw. I also have three boys one of which just got his Tech Plus, he also plays golf, caddies in the summer, ski's in the winter, and has a part time job at Brooks Brother selling fine men's apparel. Where are you working Masa? Ma-cu-do-na-ru-do? Burger King? Taco Bell perhaps?

> get a fuc*ing life. keep calling CQs on friday night. obviously
> you are under minority (that is... less than 0.000001% of whole
> population).

Well no, I have many other ham friends who enjoy radio and have many other interests in life. I will call CQ on Friday, Monday, or any other day I might have time to make a contact or two. I think the biggest difference between you and I is that I have many friends I talk to both on 2m, 440, and HF. I meet with some old college buddies on 7.125KHz on Sunday morning for a few rounds of CW, yes it's slow, yes we could do more on the internet, but we CHOOSE to have fun running morse code. We get a Novice or two once in a while checking in, and guess what Masa, this is how you meet people. We don't preach to them and tell them how bad ham radio is, we just say hello, get it? We also get together each year at Dayton and share a room, lot's of fun, tell a few stories, drink a few beers. It's what you do when you make friends on ham radio Masa.

You on the other hand seem to have no friends, no one will talk to you on the ham bands because you act like an idiot, you want everyone to listen to what you say, but then you don't say anything, you just babble like someone who is suffering from a mental illness. People on the internet call you and idiot and a moron because you've also shown them exactly who you are and what your made of. You routinely tell everyone else to get a fucking life. I suggest you take a long good look in the mirror. What about your life is so great Masa? You still haven't told us.

To sum it up Masa, your a stupid jerk who's pissed at the world because your not a part life around you. I read you like an old worn out paperback. Misery loves company Masa, so instead of joining in the fun your going to try and destroy it for everyone else. Sorry OM, the hobby is alive and well,with plenty of fun things to do. Unfortunatly you'll be left out in the cold. Have fun Cutie Boy!

Tim, ka8ddz

Sorry for all the crossposting.

Can anyone help ID this Eimac "mystery tube"?
The base and size are similar to the 4CX250
(for reference). The tube is marked in pencil on the
ceramic (though not shown in the scans)
"X2017Z Sample #2" and is similarly engraved on
the flat heatsinked top.

2 photos can be seen at --

SB DX @ WW $OPDX.387
Ohio/Penn DX Bulletin No. 387

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 387
BID: $OPDX.387
December 14, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & The GOLIST, K2KQ, K2SY, W2JGR, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, WB3JFS, N4XP, W4PJ, WA6KBL, K8YSE, DJ5AV & DX News Letter, EC1BXI, EB3GC, PFK8HC, G3SXW, G4BUE & DX News Sheet, G0ULN, IK1ZPA, JM1LJS, OZ2ELA, PS7AB, YO3FWC, YU7AL and Western Wisconsin DX Association for the following DX information.

8Q, MALDIVES. Marco, IK1ZPA, informs OPDX that he will be active from Giravaru Island, December 14-20th, as 8Q7IK. He will operate with an ICOM 7O6MKII + antenna tuner + power supply.... using an inverted-V dipoles on a fishing-rod. QSL via his home callsign: Marco Bottino, Via Priv. Terrazzi 7, 18010- Diano Castello (IM), ITALY

8Q, MALDIVES (Update/Reminder). Lee, G0ULN, will be active as 8Q7LE from the Maldives December 22nd through January 12th (1999). He will be active on SSB only on 14260 and 21260 kHz (also 10/17/40/80 meters). QSL is via the bureau or to his home callsign G0ULN.

9G, GHANA. Michael, WK6O, is currently here and is helping a Missionary friend named Sidney Barnes, 9G1TB. Michael mentions that he recently operated the CQWW CW Contest and made over 2000 QSOs on the 10 meter band using Sidney's callsign. He will soon be picking up his own callsign from the Ghanaian Radio Frequency Board in Accra which will be 9G5MG. The G.R.F. Board has given Michael permission in the mean time to use Sidney's callsign while waiting. He plans to do more CW operating before he returns back to California in January. All QSLs for 9G1TB and 9G5MG should go to WK6O. Please, do not send cards to Sidney/9G1TB via the Ghanaian QSL bureau, nor via Sid's home address. Only QSL via WK6O to have cards verified and confirmed. Address is: Michael W. Gaude, 18642 Oak Ridge DR., Santa Ana, CA 92705 U.S.A.

ANTARCTICA ACTIVITY......
Sarah, KC4AAD, is active from Siple Dome, Antarctica a few nights a

week with her QSL Manager Bob, K4MZU. They can be found on 14270 kHz after 0100z. Sarah's signal is pretty week since she is only running about 100 watts and a dipole. QSL to K4MZU.

Oleg, UA1PBA, is active as R1ANF from the club station at Bellingshausen Base for one year on King George Island. His activity this past weekend was on 30 meters between 0200 and 0400z. Also, check 20 meters CW starting around 2330z. QSL via RK1PWA.

A3, TONGA. Lee, A35VR (ex-VP2VE, 3D2VA, K3RGD), is now active from the QTH of Paul, A35RK. He has been very busy on 10 meters CW (28025 kHz). He has also been heard on 12 and 30 meters. Lee will be there until February, 1999.

EF1, TOXA ISLAND (Spain). Look for special station EF1IAT to be active until December 31st (1998). The Spanish islands reference is IDEA EA1-1-5. It is located in the IOTA group EU-080. The station will be active for the USA on 21.200 Mhz about 1800z. You can take a look at the color QSL (an aerial picture of the island) which is available at the following WEB URL: http://www.radioaficion.com/EF1IAT/
QSL ONLY via direct to expedition QSL Manager EC1BXI (via callbook) or via Jorge Fernandez Devesa, PO Box 54, 36980 O Grove (PONTEVEDRA), Spain, Europe.

FT5ZH, AMSTERDAM ISLAND DXPEDITION (Excerpts from a WA6KBL press release). Eric/F5SIH and Mehdi/F5PFP on Amsterdam Island continue to be very active. The pile-ups are still huge, so they are concentrating on the main bands and modes. They have reportedly assembled their WARC antenna and are active on those bands. They have announced that they have begun RTTY operations. They ask the DX community to understand that they are on a very small scientific and military base with a fixed meal schedule. They must QRT at about 1400z, or they will not eat. They do not have their own food or any cooking facilities, so please don't criticize them. OPDX InterNet Subscribers will receive complete copies of the press releases as an additional bulletin.

HD6DX COTOPAXI DXPEDITION. HC DX Group informs OPDX that they will be active December 19th (beginning 1100z) until 1500z December 20th, from the "Snow-White Volcano Cotopaxi" (Highest inactive volcano in the world 5.897 mts.) in the Republic of Ecuador. A group of 10 operators will be active on 40/20/15/10 meters. QSL via HC6DC. (TNX to Hector Espinosa)

OX, GREENLAND. By the time you read this Michael, OZ2ELA, will be active from Qaqatoq in the southwest part of Greenland until December 16th, as OX3LG. His activity will be on 10/15/20/40 meters. QSL via OZ2ELA: Michael Jensen, Kanalens Kvt. 6, 2620, Albertslund, Denmark. Also, look for Olso OX3UB, to be active from the same radio during the same time period. QSL via OZ1GER.

PV5/PW5, PAZ ISLAND. By the time you read this, the short operation from this Brazilian island will be active and will only last until December 14th. Look for PV5V (on SSB) and PW5W (on CW) to be active on 80-10 meters.

Also, look for them on the IOTA frequencies and the Brazil DX Net. This island has the following reference numbers: DIB-63, DFB-SC 01 and IOTA SA-027. QSL via PP5LL (direct or Bureau).

QSL INFO AND NEWS.....
QSLs for WH7/K9NW (Hawaii) are via WW9DX (Western Wisconsin DX Association) direct or via the bureau is "OK". The direct address is: WWDXA, PO Box 411, La Crosse, Wisconsin 54602 (WWDXA states, "It seems to be taking forever to have this updated at the FCC... And, yes, we WILL get caught up on the '97 contacts as well. Please no second requests.") Thanks! 73, WWDXA

J3A QSLS. Don, K2KQ, reports that he has been receiving QSLs for J3A, both SSB and CW. ALL QSLs for J3A, both CW and SSB go to WA8LOW. Under no circumstances send QSLs to K2KQ. Your response will be delayed if you do, as Don will collect them and send them to WA8LOW. Don also states that QSLs for the CW operation will be a picture QSL card. They have not been designed yet. Be patient!

NEW QSL MANAGER. Paolo, IK2QPR, has been reported to be the new QSL Manager for UA0YAY who is operating from Zone 23.

5V7A QSLS. Roger, G3SXW, reports that the 5V7A operation netted nearly 16,000 QSOs. QSL cards are being printed now and will start to flow before Christmas. The QSL Manager is GM4FDM: Tom Wylie, 3 King's Crescent, Elderslie, Renfrewshire, PA5 9AD, Scotland or via bureau. Their special E-mail request system for bureau reply is very popular. Please access the QSL request form on their Web site at:
http://voodudes.com
Or E-mail QSL requests to 5v7a@voodudes.com. Note that 5V7A cards are NOT via G3SXW, and that personal 5V7 and 9G5 cards go only to home callsigns as published.

Franck, FK8HC, was active in the ARRL 10 Meters Contest this past weekend. QSL via VK4FW or direct to: Franck Petitjean, P.O. Box 7636 Ducos, 98801 Noumea, New Caledonia.

BQ9P LOGS ARE NOW ON THE WEB! Go to: http://www.qsl.net/bq9p

Tom, N4XP, has announced that as of Tuesday, December 8th, all KH9 (Feb 1998) and ZK1XXP QSLs received direct have been mailed with the exception of those received at WA4YBV in the past 7 to 10 days. If you have not received your card(s) and it does not arrive in the next week, contact Tom via E-mail (n4xp@juno.com), and he will be glad to research the contact. Bureau cards will be processed after a short pause.

The QSL route for station EC1BXI in the CQ WW SSB Contest and 10m ARRL Contest is via G4RRA (Bureau) or Callbook (if via direct).

SAD NEWS. It has been reported that Robert Dow, WB2CJL, one of the editors of the VK2SG RTTY DX Notes, has become a "Silent Key" due to a heart attack during the last weekend in November. He was 68 years old. Robert

reportedly issued his last RTDX Bulletin on November 19th. His signature motto at the end of each bulletin was "REMEMBER, DX DON'T SLEEP." OPDX would like to send our condolences to the family.

SPECIAL EVENT. The General Secretary of Yugoslav Amateur Radio Union, Mr. Srecko Moric, YU1DX, announces that six stations in Yugoslavia will be active to celebrate 800 years of the Hilandar monastery on Mount Athos. Look for the following stations with the special prefixes:
4N800H - Hilandar monastery (HQ station) YU800G - Gracanica monastery
YT800FG - Monasteries on Fruska Gora YZ800R - Ravanica monastery
YZ800MO - Ostrog monastery , YU800S - Studenica monastery
A YU-SV team is trying to get a licence to work from Mount Athos. Stations are active now until March 31, 1999. Activity will be on all modes including RTTY, on all HF and VHF bands. Stations will also be active during contest. All QSLs go to YU0SRJ (P.O.BOX 48, 11000 Beograd) or via bureau.

SPECIAL EVENT. On December 19th and 20th, the Catalonian Ham Radio Union and the Television of Catalonia will put on the air the very special callsign EG3TVC. The station's activity will be on the air during this year's 7th Marathon devoted to collect funds for the scientific study of Diabetes. For more information, please check the following WEB sites:
http://www.urc.es/eg3tvc.htm
http://www.fundaciomaratotv3.org
http://www.tvc.es/marato

T8, BELAU. Look for Hiro/JF1OCQ and Tatsu/JA0QBY to be active from Palau Island December 19-22nd, as T88HM and T88TN respectively. They will be operational on all HF bands and 6 meters SSB/CW. QSL infomation is as follows:
T88HM - Hiro C Miyake, 1-3-6, Asakura-Cho, Maebashi-City, Gunma 371-0811, JAPAN or via bureau to JF1OCQ.

T88TN - Tatsuo Nishihara, 1458, Kihimiya, Mishima-Cho, Mishima-Gun, Niigata 940-2322, JAPAN or via bureau to JA0QBY.

UN, KAZAKHSTAN. "The 59(9) DXReport" states that Valery, UN3G, has a permit for 6 meters (CW/SSB) to run 175 watts, good until September 10, 2001.

VU, INDIA. Miku, VU2WAP, has been very active on 75 meters this past week. Activity has been between 3785 and 3795 kHz between the times of 0045 and 0200z. The East Coast stations of the U.S. report Miku has a big signal. QSL direct only via the callbook address: Manoj Agarwal, 44/1E, Fairfield Layout, Race Course Road, Bangalore, 560001, India

XT, BURKINA FASO. The "DX News Sheet" reports that Mike/F5RLE and Joel/F5AOW will be active again from February 7th to March 1st, as XT2OW and XT2DM. Mike will do the CW and Joel the SSB using an IC-706 w/100 watts, 2 element beam for 20-10 meters and a G5RV on the other bands. Look for activity on the WARC bands. QSL via F5RLE.

XU, KAMPUCHEA. The "DX News Sheet" reports that F5NRY is active as XU5NRY on RTTY. His length of stay is not known. QSL via home call.

YO DX HF CONTEST RESULTS. Ciprian, YO3FWC, informs OPDX that the final scores of the 1998 YO DX HF Contest are now available at the following WEB site: http://www.qsl.net/yo3kaa
Also available at this site are updated Romanian Ham Activities and the weekly updated YO CallBook.

>Tom Hix
>W4TH

I say, the 756 is more bang for the buck.
They're both very similar radios in performance...the 870 is claimed
to have an outstanding DSP...I found the 756 DSP to perform equally
as well. The RX noise floor was measured to be about the same.
Both allow you to talior TX audio.
870 offer no optional filters..the 756 has space for 2.
Both allow computer control...however, the 756 requires an interface
(no big deal ...you can buy one or build it for a few bux) ! The
870 connects directly to a PC.
The 756 has a much friendlier user interface...this isn't to say that
the 870 is more difficult to use because it's a more complex
(equated to "better") rig. The 756 screen affords a much better
menu system.
The spectrum scope on the 756 is a very nice feature to watch for
activity up and down the band or to "watch" for 6m openings.
The 756 has dual receive on the same band...also a nice
feature for split contesting or scanning around while waiting for
a sched.
Both radios are mid-grade contest quality rigs...
In my judgement, again...performance is very similar. With the 756
having the bonus of 6m, and several more bells and whistles, I say
it's the better buy.

Has anyone ever heard of an Antenna called "Hornet"? It is a 3 element tri band, 10.15 & 20. Or at least I think its these three. I do know its 10 m. It has a 13 ft boom, The 3 elements are about 14 to 18 ft. And on the ends of each one there is a loop. I was told this was a Hornet made in Oklahoma. That's all the info I can get about it now.

Thanks and 73 Cliff W5CAW

Actually Noda san, I was showing my neighbor the pictures I copied from the MIR station this afternoon, I also had him over to listen to some of the voice transmissions from the Cosmonauts. He thought it was quite remarkable that somone with some inexpensive ham gear could actually talk to someone in space or to others via satellites. Hardly an old paperback.

But since you've not done any of these things you really don't know what your talking about now do you Noda san?
Go tell your neighbor how unhappy you are, tell him you spend day after day posting silly crap to a newsgroup telling everyone to get a life and see what he says. Keep trying Masa, someday someone might give you the time of day. Untill then I'll bid you goodbye, you have nothing to say, no opinions worth debating or discussing, and your attitude sucks.

An opinion which is not based on all relevant facts is dishonest. Truth, therefore, is an ambiguous term, because "truth" can have an opposite meaning, depending on the context in which it is perceived.

As an example, is the following statement true or false?

"Green is a better color than red."

I think you get the picture.

There it is... one old s*** with handy talkie...
Someone, named C.B. is interested in his talkie and asks the question,
"Cool. Who are you talking to ?"
The guy with talkie named C.W. answered, "I am looking for someone."
C.B. asked, "Oh... do you talk to your friends or ?"
C.W. answered, "No. I am looking for someone on the frequency... I am
new to this area and... It's called repeater system and..."
C.B. : "Oh... it's like truck drivers... are you a truck driver ?"
C.W.: "No. It's called ham radio and we are licensed and..."
C.B.: "Oh... ok... maybe you should become a truck driver !"
C.W.: "No... We also communicate by using morse code and it's fun."
C.B.: "Huh ? (stranger !) Sorry. I have to go. Nice talking to
you."
C.W.: "By the way, do you have time on Friday night ? We are looking
for someone to set up our station to participate for morse code
contest."
C.B.: "(Hell... stranger... I don't want to get involved in this)
Sorry... I am busy for going out with my friends."
C.W.: "Going out ? Come on. You should stay in your room alone and
enjoy the world of morse code... I am sure you enjoy once you start
learning dits and dahs... You aren't that young !"
C.B.: "No thanks !"
C.W.: "N1CWBEST listening on 147.xxx." (No answer) "hey wait C.B....
I will get someone... a couple of people were just talking here a
second ago !"
C.B.: "Sorry, I have to go."
C.W.: "N1CWBEST signal check please !" (No answer)
"You see... C.B... you hear the morse code... it's from the repeater
and it says N1CWSUCK."
C.B.: " (Get a life idiot...) Bye"
C.W.: "N1CWBEST is listening on 146.zzz." (Still no answer)
"Wait... C.B... you didn't understand why it's fun to have this
stuff... aren't you interested in getting licensed ?"
"Wait... C.B... CQ CQ CQ..."
"Wait... ouch... my battery is dying... come on... wait C.B...
Damn... answer someone...
"N1CWBEST is declaring emergency !"

I have the following items for same, both in excellent condition:

- Cushcraft AR270 vertical VHF/UHF antenna

- New Wave Antenna Portable collapsible Mast (from AES catalog)

- Adventurer (47" - 12 ft)

- big foot (park-on mount)

Any/all offers please.

Thanks.

Congratulations, Mark! I sincerely hope you'll have as much fun with
the hobby as I'm having. People like Burt and CBRambo in NO way
represent what you'll encounter on the air. I've met more friendly,
good hearted folks in the last month (I got my General in November)
than I would have imagined.

Regards,
Doug KC0EME

Masataka, I've always found your choice of the nickname "Huggy"
amusing. In the U.S. "Huggies" are a brand of disposable diapers, and
a "Huggy" is always thrown away when it, as you are, is full of
excrement.

Don't forget to flush, Masataka, you boring, puerile lackwit.

I think that was the main point of the original poster -- regardless of
what is ASKED for, the feds are notorious for coming up with their OWN
ideas on how to address a problem. And that solution might be worse than
what the original problem was.

Mark, for what it's worth, I would probably go ahead and take the 5 WPM code test and get my Tech Plus liscense. With the sunspot cyle on the upstart again, one of the best bands is 10 Meters, you can literally work stations around the world on less than 25 Watts of power and plenty of used equipment is available for 10 Meters. Congratulations and good luck.

5197. Motorola - Big Profits for Human Life

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-13 00:00:00 UTC
From: jcsarp@aol.com
Message-ID: <19981213101655.08510.00001527@ng137.aol.com>
Source record: 155725

http://www.worldnetdaily.com/bluesky_smith/19981208_xcsof_motorola_c.shtml

China has begun a new round of imprisoning dissidents. The enforcer of the brutal Red policy of oppression and murder is the People's Armed Police. Ironically, Chinese police orders to arrest, torture and kill are being given out over radios made in the USA.

In November 1994, Motorola employee and former Clinton White House National Security Council member Richard Barth began his successful effort to sell encrypted (secure) radios and cellular phones to the Chinese People's Armed Police.

According to Barth, a high-tech trade war had erupted between the U.S. and Britain. Motorola's Barth wrote to Theodore McNamara, assistant secretary of state Nov. 23, 1994. According to Barth's letter, Motorola had the approval of the National Security Agency and President Clinton to sell high-tech communications directly to the Red police.

"European firms," wrote Barth, "including Nokia, Ericsson, Alcatel and Siemens, have for a number of months been able to market and sell GSM cellular systems with A5-2 encryption in China as a result of a decision taken by the UK intelligence agency, GCHQ."

"This is to request that your office initiate action to obtain a waiver from requirement for individual export license notifications to Congress for wireless mobile communications systems containing encryption for China. Such a waiver was issued by the president in September of this year for civilian satellite systems and encrypted products for use by American firms operating in China."

McNamara immediately replied to Barth, noting the State Department had other concerns.

"As you know, there are important issues that must be considered carefully, in light of the post-Tiananmen sanctions," he wrote. "The president recently renewed the administration's commitment to these sanctions when he de-linked MFN and human rights issues. ... Government policies regarding exports of U.S. Munitions List items are covered by these Congressionally mandated sanctions."

The State Department objected to the Motorola sale to the Chinese police for diplomatic reasons. After all, the linking of human rights and high-tech exports dated back to Roosevelt policy on Nazi Germany in the 1930s and continued right through the war against apartheid in South Africa during the 1980s.

The State Department had good reason to distrust the Red Gestapo with advanced U.S. technology. The Chinese police run the "Lao Gai" prison camps -- slave

labor factories where beating, torture and starvation are a matter of policy. The Red Gestapo is funded by slave labor factory products produced in the Lao Gai slave labor camps.

The Chinese police execute dissidents -- they are the Red sword of "justice" against anyone opposing the party. The most gruesome PAP policy is to sell the organs of executed prisoners for hard cash. Some of those executed were guilty of no more than speaking out against the Communists.

According to congressional testimony, PAP officers drag pregnant women out of their homes and take them to forced abortion clinics. No license -- no baby. Many women are also forcibly sterilized as part of China's one-child-per-couple program. The State Department knows this and so does Congress. It is the stuff equal to Nazi war crimes.

However, delays in U.S. government approval because of murdering dissidents and violating human rights go against the Motorola corporate bottom line. Human rights are an expense, a cost that threatened to kill a lucrative Chinese export deal for Motorola.

By early 1995, Motorola was quickly growing impatient with the delay over human rights and their proposed sale to Red China. In February 1995, Motorola's CEO, Gary Tooker, wrote Ron Brown an angry letter detailing his objections.

According to Tooker, Brown needed to "Delegate to the export control officer appropriate authority for reviewing certain classes of controls, e.g., encryption. ... Export controls administered by the State Department at the behest of the National Security Agency (NSA) should NOT be referred for endless delay to the human rights bureau and myriad others in State."

Motorola applied more pressure against the diplomats at State in another 1995 Motorola document, a fax letter from Richard Barth which was cc'd to various players such as current CIA Director George Tenet, who was then inside the White House National Security Council.

Barth wrote to his White House, and Commerce friends, "Please forgive the informality of this note, but I want to move the process along here and not stand on formalities. We currently have about $100 million worth of two-way radio business tied up by the lack of a waiver for China. ... I urge you to get in writing to the State Department asap language that seeks a waiver for 'cellular, PCS and two way radio systems,' as recently agreed."

Finally, in July 1995, Motorola got the waiver. Clinton overrode the objections of his diplomats and OK'd the export with his signature. Tooker, wrote a personal note to Ron Brown, expressing his gratitude for Clinton's signature.

"Dear Ron," wrote Tooker to Brown. "I am writing to thank you and some key members of the Commerce Department for your assistance in obtaining the presidential waiver for encryption export sales to China."

Motorola's sale to the Red police came at a very high cost. During a 1998 interview, Chinese dissident Harry Wu told of his failed attempt to enter China through the remote border with Kazakhstan. Wu was quickly identified by the

Chinese State Security and arrested by the People's Armed Police. After his arrest, the PAP officers escorted him to prison, taking their orders over brand new Motorola encrypted radios.

Wu's observation on Motorola equipped PAP officers is backed up by Democrat Rep. Nancy Pelosi from California. She too was roughed up by PAP thugs in Beijing along with her husband while trying to meet Chinese dissidents. According to Pelosi, the PAP officers took their orders over Motorola radios.

Motorola's Barth, rightly, asserted that perhaps the Europeans could have sold a similar system to the Chinese police. That may be true but Motorola is not thy brother's keeper. Motorola is a soulless corporation with a cash bottom line.

Motorola made the sale to the Red Gestapo, a sure sign of strong customer product support. Nokia, Ericsson, Alcatel and Siemens lost out. Why not brag about it? Why not tell the whole world? Why does Motorola want to cover it all up?

Would you brag about a deal with the Devil?

Clearly, if the Chinese Police need more Motorola equipment all they have to do is cut-up another dissident. No one will ask where the money came from.

Do nine out of 10 murdering Red Gestapo agents prefer Motorola over the next leading brand? Maybe not. There is, however, considerable documentation that Motorola and Bill Clinton tried very hard to make it at least eight out of 10.

>Masa, your problem is you never figured out how to talk to anyone.

do you know what ? 90% of 2m repeaters in Montreal are inactive 24
hours a day except with some auto CW identifiers at specified interval
if they are equipped with such things.

> No wonder
>you had such a hard time finding anyone to talk to on 2m.

unforrtunately, most of the people talk on 2m only if they know each
other.... or unless you have some interesting callsigns from foreign
countries. as far as amateur radio goes, it is DYING here in
Montreal. a lot of nets collaped in a past year or two.

get facts straight before making any comments plz.

>if they are equipped with such things.

Gee that's funny, I had some great QSO's on my last trip to Sherbrook. I had no problem at all finding lot's of people to talk to. Must be you and your adolecent attitudes.

>unforrtunately, most of the people talk on 2m only if they know each
>other....

Just exactly how do you think they got to know each other butt head? Are you completly brain dead? Do you think they all knew each other BEFORE they met on ham radio. Sheesh, you get dumber with each and every post Masa.

>or unless you have some interesting callsigns from foreign
>countries.

Well you have a JA callsign don't you? So shouldn't that give you something to talk about? Ha ha, wouldn't matter if your call was JY1 nobody would talk to you anyway, your an idiot. The locals on 2m in Montreal know it, and thanks to the Internet so does the rest of the world.

>get facts straight before making any comments plz.

It was an opinion goof ball, and as far as facts go, you wouldn't know one if it bit you in the ass.
Why not get yourself a girlfriend Masa, then you wouldn't worry so much about whether ham radio is dying or what the current state of ham radio is.

5203. Best heat sink compound?

Newsgroup: rec.radio.amateur.misc

I want to use use some heat sink compound in a optical application to try to cool a very hot bulb. I plan to apply the compound around (and in contact with) the bulb base. I will be very careful to not insulate any electrical connections with the stuff.

I remember that 10-12 years ago there was an issue with some of these compounds separating and some of the oils running and making a mess of the circuit. Obviously, in my application I can't have any separating or contamination at all. I'd hate to try to clean up this optical device if this were to happen.

What are your experiences with these compounds? Recommendations? Things to avoid?

Sorry about my modified return address, but I hate getting spam.

Thanks,
Dave

If your near Taunton in Somerset UK I'm giving away items which only gather dust, nothing special but here it is:

2 x 2m fold over mobile whips, both are SO 239's 1 is I believe 7/8 over 5/8 the other 5/8 over 5/8, someone's going to tell me they can't be but I can't remember what they are.
1 x 70cm fold over mobile whip 7/8 over 7/8, SO 239.
1 On glass type scanner antenna 112/1200mhz, complete and un-opened, about 2 years old (Maplin RU 76).
1 G-whip HF mobile whip with sliding switch, it's either 15/30 or 10/20 mhz (something like that) with ball mount/cable and gutter mount.
1 Microwave modules MMA 144V low noise preamp, 15 db gain rf sensing for tx, with instructions.
1 Hansen 144/430 200 watt SWR meter with N connections, still with original box.

All are in good working order, most haven't been used for about 5 years, maybe longer.

That's it for today.

Most heat sink compounds do not do well over about 120 deg Cels.
They are all about the same. They must meet required standards.

Your proper answer is to use a proper socket with cooling for hot
running lamps. The compound may end up seperating and making a mess.
It also may solidify under the heat thus locking your bulb into the
socket thus causing other problems...

5214. Need info on Alinco EMS-45 DTMF mic

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-13 00:00:00 UTC
From: Brett <bduane@primenet.com>
Message-ID: <3674018C.F050357@primenet.com>
Source record: 155742

A couple of months ago, my car was broken into, and the touch tone mike was taken. Now I'm looking to hack another mike to replace it. The Alinco EMS-45 has all the buttons my old mike had, and I like the feel.

I'd like to know a few things about what's inside. At the top of the list: Do DTMF tones get generated in the mike and output on the TX audio line?

Everything else is 'hackable'.

Thanks for your help.

QST recently featured a DSP I/Q receiver very similar to the one I built
nearly 3 years ago and wrote about here at the time. It uses the R2 front
end structure, but uses a DSP EVM at the outputs of the mixers. The one
in QST uses the Motorola EVM, mine uses the Analog Devices EVM. Mine
is crystal controlled rather than being tunable (proof of concept receiver),
and it uses a passive preselector and a switchable preamp/attenuator
ahead of the mixers to control dynamic range a bit better. But the ideas
are basically the same in the two receivers.

I've had a over two year jump in coding, however, and have directed that
coding toward digital reception. (But I'd note that a lot of development
work has been done by the TAPR HF SIG members for the Motorola
EVM. There's actually more code available for it than for the Analog
Devices EVM. So anyone building the QST receiver can use much of
that code instead.) I used the Analog Devices EVM because at the time
it was cheapest, and I liked their assembly language. If I were doing it over,
I might consider the Motorola EVM instead to take advantage of the TAPR
code base, or I might go with one of the newer and faster Analog Devices
EVMs. C compilers for the DSP chipsets are available at reasonable
prices now, so preference of one assembler over the other is no longer
an issue.

(What I've been actually attempting, without much success so far,
is to replace the EVM completely by using the PC sound card and
doing the DSP on the processor in the PC. A Pentium 200 has enough
horsepower to do it, and a MMX Pentium should do it easily. I've been

having trouble synchronizing the samples while running under Win95. I haven't figured out how to lick that problem, though I know it can be done since there are commercial programs which do it, ie Cool Edit. If I get that working, the receiver becomes very trivial in terms of hardware, just a pair of packaged mixers and a local oscillator. The rest is all software.)

The transmitter is similar to the T2, except that the inputs to the mixers comes from a PC sound card (I know how to *output* sound correctly). That uses wavetables for the signal design, and shifts table addresses in response to data. This makes it very simple. It uses a MMIC PA running +7 dbm. I generated the wavetables using Mathcad, and wrote a simple program that uses the wavetable addressing as the transmit encoder.

(But I've gotten a new idea, from a German fellow posting in the homebrew group, that's even slicker. It turns out that a VGA video card can be used as an arbitrary waveform generator that can cover HF. All you have to do is write waveform tables to video memory to select the frequency and modulation, or you can modulate it rapidly by switching color palettes. Neat! That eliminates all the RF hardware except an output filter. It can also double, without modulation, as the LO for the receiver mixers. If you want to see what you're doing, you have to have two VGA cards in the computer, but they're cheap, and some of them let you select addressing and interrupts so that there's no conflict. Note, you have to program the video controller for zero sync interval, but all the chipsets support that, so you can get continuous waveforms.)

The hardware for transmitter and receiver are a weekender project. Thanks to the EVM module, most of the work is already done for the receiver, and the transmitter is so simple it can be built on a piece of perf in a few minutes. (With my newer ideas, if they work out, things become even simpler, with the computer taking over almost all of the radio except the two receiver mixers.)

The advantage of a direct I/Q design should be obvious. Nearly any arbitrary signal design can be implemented with an I/Q modulator and demodulator. With the direct conversion of the R2/T2 design, that can appear on any frequency with just a change in the oscillator and RF phasing networks. They can also be used as a fixed IF for a more elaborate superhet rig.

A somewhat more ambitious project in the latter regard has been undertaken by a group of Canadian amateurs. They are using DSP with a 20 kHz input and digitally demodulating with numeric mixers and oscillators down to baseband and then doing I/Q processing. This is somewhat similar to how some of the better commercial DSP based radios work.

I didn't choose to do mine that way for a couple of reasons. It requires faster parts, which cost too much when I started (they're

cheaper now), and it requires more analog RF stages ahead of
the unit than the T2/R2 concept does in order to get the signals
into a ham band, so it would have required a lot more analog RF
construction than I wanted to do in order to prove the concept.
But it is an attractive approach, and could even be retrofitted to
a commercial rig without too much work by doing a final down
conversion from the commercial rig's last IF to the IF of the
DSP unit. That then retains all the bells and whistles of the
commercial rig.

Note this is very different from the audio DSP featured in some
ham rigs. This is true IF and demod DSP. That permits you to do
a lot of things you can't do at baseband. The amateur rigs which
have IF DSP, top end Icom and the Kachina 505, don't seem to take
much advantage of this, they just implement rectangular filters and
ordinary demods, but that's just a matter of doing better coding to fit
a particular signal design. I'd note that Kachina at least is open to
telling you how to download your own code into their DSP. I've been
considering buying one of their radios in order to do that. But I've
been having too much fun trying to make a radioless radio from
the computer to seriously consider that at this time. It does make
an attractive development platform, however.

I haven't written this up as a magazine article because all of it
is in a constant state of flux as I think of new ways to do things.
But I have irregularly posted notes about it to the net. I've saved
those, and may put them together on a webpage, with pointers
to the many other web sites I've found which provided many of
the ideas I've discussed. I've got a webpage, but I haven't taken
the time to do anything with it yet (webpage design isn't a major
interest of mine). Maybe later this winter.

What can a person say Larry? You have defined your frustration and know exactly what you would need to do to rectify the situation. When you want to change things badly enough you will do so. I have noticed in my life that people usually can find the time for the things they really to happen.

good luck N1MSV

Sorry, guys. I think this is all smoke and mirrors. A cooked-up PR campaign between the ARRL and the FCC in hopes this "letter" will help calm the bands.

The most reported jammer on HF, WA9KJI, had his quiet hours rescinded last week. And then we had the most vile HF incident in history just three weeks ago today, as WB2OTK embarrassed the ENTIRE amateur community with his repulsive racism, indecency, vulgarity and profanity. This, too, has gone unpunished.

Until the FCC throws the book at these two radio criminals, it has accomplished NOTHING!

The Cosmonauts aboard MIR have been sending SSTV this weekend, don't know how long it will continue but using a sound card program, an HT, and and a dual band ARX-270B antenna here's what I could see this weekend. They are using the beacon freq 145.985 MHz.

http://www.eaglequest.com/~ka8ddz/mir.html

I missed the best pass, but there is one more this evening. It was pretty cool, the Cosmonauts were making comments in English about the pix, the signals were very strong and full quieting for 75% of the pass which lasted about 10 min here in Michigan.

There are lots of free news servers out there for anyone to use that are regular news servers - no ads, and are not web based. You can use Yahoo or any search engine to find a list of them. The news server that my ISP provides is so unreliable that I use one of the free ones, and it works great. So you *do* have other choices.

But before you flame me too, let me say I don't mind the DejaNews ads as I use their news searching service on a regular basis and am glad it's free, paid for by the ads...

Cross-posted to: rec.radio.amateur.misc,rec.radio.amater.policy

Oh brother-- am I about to catch some flames!
I'm going to debunk some ham-radio-hooey
that's become Holy Gospel around here--

Do most "jammers" really matter?

Not a bit.

Demanding that the FCC "clean-up" the ham bands
is a very bad idea.
I think that, in the end, we're all going to be
very sorry we asked the feds to get involved at all
in our business.

Our memories are very short. I remember the early 1970s
when a few grouchy, lazy old men- rather then dealing with
the problem themselves- went whining to the FCC
about crowding on 2-meters.

The result?
The FCC under Walker threw massive commercial repeater licensing
requirements at us and repeaters nearly died on the spot.
It took years to recover.

Asking the feds to help you solve your problems
is like poking a sleeping dragon-- he might help you,
but he's much more likely to fry your butt and eat you
because it's quicker and cheaper that way.
He'll get your buddies that are standing around, too,
which will make you most unpopular with them.
Better to let the dragon sleep and fix our problems ourselves.

There are hundreds of thousands of hams in the U.S.
There are, at most, about a hundred who are truely "bad eggs."
They could easily be handled by non-violent social pressures
from local members of their peer group that find them offensive.
However, that peer group is either too lazy, spoiled
and/or fearful to take any action. They'd rather
cry and moan to the feds, who are far more likely
to hurt *us* then help *them*.

I don't personally have a problem with most of
these so-called "jammer" people on HF.
I can't speak for Californicate or New Yuck,
but down here in the south (if it's a saturday night),
I might find two or three QSOs being jammed

across a band that contains dozens and dozens of "normal" QSOs.
And NO jamming at all of CW or digital modes.
I'd rather sit back and chuckle a while
at "Polly" and "Porkbutt" and "Walter Barstool's"
loony antics then whine and moan about it.
I am free to move to a different freq when I get tired.

The complainers are risking the heavy-handed blunderings
of a federal agency over what is -in reality-
a very small problem. Step back a moment and take
a look at the BIG picture. You'll see that ham radio is
in pretty decent shape despite these minor "blemishes."

And the FCC---
Their spending ten-cents-worth of taxpayer time
and taxpayer money chasing a few old,
loonie drunks on the ham bands is inexcusable.
Do you really believe that anyone that *matters*
internationally judges the United States of America
by the antics of Walter Barstool and company??

I seriously doubt Boris Yeltson tunes-into 14.313
to help him decide about the new START negotiations.
And I don't think the Mexican ambassador is telling
Mr. Clinton that they won't sign a trade agreement
because 3950 is a mess.
What utter, outrageous nonsense!

The DEA and DOD need the FCC's assets to help run-down the
drug runners and alien smugglers on the boarders who
are using radios to assist in their murderous deeds.
They need to be out finding clowns who risk air traveller's
lives when they don't properly light radio towers.
The FCC needs to find and hang people who jam police
and air traffic. When it comes to life, safety,
commerce or international relations,
what happens on 2-meters, 14.313 or 3950
doesn't amount to a pile of horse ploop.
It's a silly, strawman problem overblown by
waaaaay too much attention
and way too-fragile egos.

I protest the FCC using our tax dollars to "clean-up"
such a ridiculously minor "problem." They should
get back to work doing something that matters.
The ZOO nets have come and gone since the days of spark.
In time 14.313 will be utterly forgotten-- meaningless dust--
and its existance will have NO net impact on life as we know it.
They don't matter unless you and I make a big deal of them.

Hi, I'm looking to buy a low power FM transmitter. I am looking for a unit which is PLL controlled and the frequency being set by something like DIP switches (no $35 type tunable one's please). Something like a Ramsey FM-25 would be excellent, but anything of that type is good too. Please email me if you have such a unit for sale, with your asking price. I also have some items I'm willing to trade (scanner, several CBs, etc.) but am willing to pay cash.

Thanks

What is that non sequitur supposed to mean? You could send your terse but slow little messages over the internet too and stop wasting any spectrum, but we're all interested in using radio. Laura says compare equal baud for CW and digital. 12 WPM is approximately 10 baud. 10 baud using MSK is 28 Hz occupied bandwidth (at -22 db). With CCIR shaping, 12 WPM is 132 Hz for CW (double sided PSD, it is AM, at -22 db). (Obviously, these rates are scalable, I picked 12 WPM because I'm using 10 baud in my system and already had the figures for various code and signal designs.) Clearly, when you compare equal baud, CW comes out the loser in spectral efficiency. So Peter's statement is false.

We can actually do much better than MSK (my system does), but MSK is very simple to implement, so it is a good comparison to CW. The radio equipment required is virtually the same. The encoder and decoder for MSK is much simpler and cheaper to acquire than the one for CW (ie takes fewer man months of labor), and it will work at a lower CNR (for the same error rate) than will CW too (about 8 db better with no FEC, better than that if FEC is used).

So if it is low rate information you want, then you can do it with better spectral efficiency and lower power with MSK than with CW. If it is high rate information you want, you can't do it at all with CW, of course, but you can do it with other digital methods (regulations permitting). We're doing 56 kb in our GRAPES network (also MSK), and the Slovenians are doing 1.2 Mb in their radio network (plain FSK). Unless you have a T1 direct to the internet, you won't beat that for high rate data.

But getting back to HF, Clover II gives us 540 WPM equivalent with the P-38, and up to 1080 WPM with the 4100, both in only 500 Hz occupied bandwidth. PACTOR II can do the same. Of course they can't go that fast

at a very low Eb/No, but Clover II is still delivering 90 WPM equivalent at signal levels you can't even hear, and PACTOR II does a bit better than that. Of course you need SSB grade radio equipment, and the Clover II or (especially) the PACTOR II equipment isn't cheap either. So lets look at another alternative.

Consider Coherent (or the newer Africa). It only takes a few bucks to set this up. It is very spectrally efficient, albeit low rate, and works well at very low signal levels, and in the presence of skywave multipath. For a bit more speed, you might want to try PSK31. Again a cheap and robust system, but a good bit faster than Coherent.

But you say you don't want a cold heartless machine to do your decoding for you. Ok, then try S/MT-Hell. 48 WPM in 170 Hz, and it is human readable. It uses the eye's ability to detect patterns in noise, which is more effective than our aural sense for doing that (our brains have about 10,000 times more processing capacity for visual information than for aural information). And if you know how to read, you already know how to understand the patterns you detect, ie it is dot matrix plain text scrolling across the spectrogram (you won't believe it until you see it). The radio equipment required is again the same as is needed for CW (with a very slight modification to the transmitter, two parts, a resistor pack and a varactor). You can do it with SSB equipment too, AFSK, just tie the radio to the computer sound card.

The transmit encoder is a simple BASIC program that will run on any PC (or code it on an embedded $2 PIC taking its input directly from a compact PC keyboard if you don't want to lug around a PC). The display is Gram42, a free spectrogram program that works on a PC with a sound card, or you can use a cheap embedded DSP chipset ($27) doing the FFT and driving a grey scale LCD display ($19 from Digikey, or rob it out of some old piece of consumer junk) mounted on the face of the radio. If you're clever, you'll use the same LCD as frequency readout for the radio. (This would make a heck of a ready to go QRP portable rig. I'd like to see someone market a kit.)

In a pinch, you can even decode Morse the way Sammy intended, by eye, on the spectrogram display, and key it using a keyboard keyer routine. I swear, once you see signals on the spectrogram display, you'll never be satisfied to operate blind again. S/TM-Hell is so cute it is sure to charm you, but the utility of the spectrogram display for other modes, including CW, shouldn't be underestimated either. (Spectrograms are used for sorting out very weak signals in the presence of interference by submarine sonar operators, and they're used by amateurs interested in EME and SETI too, see Mike Cook's site for amateur detection of the signal from Mars Observer using his spectrogram program.)

If you let technology work for you, you can do much better than CW, and do it in a spectrally conservative and efficient way. In most cases the radio equipment is virtually identical to the equipment you'd use for CW, and in most cases the equipment you need for encoding and decoding you already have, or can build cheaply. Performance is better in every case. That is usually the case when you work smarter rather than harder.

Now note well that none of these systems is currently in widespread use by amateurs, even though all of them work better than what most amateurs use, and cost less in many cases too. This is a glaring example of amateurs being behind the technological curve. Instead of continuing to trot out the tired old Morse Myths, we need to be pushing these (and other) techniques as modern improvements over old fashioned CW. At least then amateurs who still choose to use CW will know that they're making that choice for reasons of nostalgia rather than due to inflated claims of superiority.

Depending on the information rate we need, the spectrum we're willing to consume, and the power we're willing to run, there are a host of techniques we can use on HF. SSTV is very information rich, as the saying goes, a picture is worth a thousand words. Analog voice is very popular because of the natural human touch it puts on our contacts, and it is fairly information rich too. When we have the SNR and bandwidth to make it play, it is the mode of choice for a majority of amateurs. Digital voice technique may displace SSB the way SSB displaced AM over the next decade or two, bringing all the advantages digital modulations have, but image and voice, no matter the modulation method, will remain popular with amateurs because of the immediacy, richness of content, and the human touch that they bring to contacts.

Morse works when the SNR resource is somewhat less (but surprisingly not much less) than is required for SSB, and when we don't want to commit to using a large chunk of bandwidth. It is not very information rich, it is error prone, and is quite mechanical, but most of all it requires an inordinate amount of specialized operator conditioning to be effective. (Some amateurs look at that as a challenge, others see it as a tedious chore.) Other text modes are more spectrally efficient, are as information rich, or richer, work at lower signal levels, are robust against errors, and by leveraging technology are less dependent on specialized operator conditioning to function. This allows the operator to concentrate less on the mechanics of contact and more on the humanity of the contact, ie actual exchanges of thoughts and ideas.

Text is text, so all the text modes share the same advantage of accent independence, and all can make use of the text shorthand (Q signals and QSO English) used by Morse operators who share little in the way of a common spoken language. Digital methods lend themselves to an even more compressed shorthand, called common codebook compression, which allows us to have a large common vocabulary expressed as simple 12 bit numbers (translated and expanded by the computer to human readable form as words and phrases on each end). This can greatly reduce the required spectrum for our contacts while greatly increasing the amount of information exchange we can enjoy. (This is a really neat technique, I'll discuss it with anyone interested, but I already expounded on the idea before about a year ago in the policy group so some of you may already have seen it.)

For the very weakest signals, digital techniques have a clear advantage, and for operating in the presence of interference, certain digital techniques stand out as clear winners. And of course nearly all digital techniques have the ability to convey more information more quickly than the average Morse operator can when conditions allow.

Unfortunately some very poor choices were made for the first generation of digital techniques for amateur use, and that has colored some operators' expectations for any digital technique. But there are some very much better techniques in amateur use now. As the advantages of some of these techniques become better known, and as the very low cost to implement some of them becomes better understood, they should gain in popularity. I've mentioned a few of them today. There are others. For those interested in experimentation, there are great opportunities right now to try a variety of techniques, perhaps even to invent one or two, before things get set in concrete.

I wouldn't let anything or anyone in this newsgroup upset me too much Georga, this newsgroup is full of a bunch of babies and idiots for the most part that probably haven't even had an intelligent conversation via ham radio in 20 years, although there are idiots in the younger crowd in here as well. As long as they stay in here and voice their stupid opinions and don't get on the air with several hundred watts of PEP for all the world to hear what idiots they truly are, I say let them have it, hey it's a free country. I come in here a lot of times to get a laugh out of the stupidity of some of these people who call themselves "hams." And if anyone wants to debate my opinion with me, feel free to e-mail me!

Congratulations ! I hope you have a lot of fun with your new hobby.
Probably the best first thing you should do is spend awhile just
listening to pick up on local "protocols" Almost everyone likes a
good listener and conversely, nobody likes a blabbermouth. When you
are ready to make contacts on your local repeater just slowly and
clearly announce your call and say you are listening for any call.
Welcome to radio!!

Maybe you should read the book he talks about on his web site before you make such blanketed assumptions. While you're at it, read a book called "The Allies and Auswitsch"<sp> to find out how the good ole U.S.A. knew about the death camps and did nothing. In fact, our government turned many Jews away from entry into this country, sending them back to be slaughtered!

<snipity>

14.313, 3950, and the rest of the frequencies that are popular among jammers are not the primary target of the cleanup. Major cities are having problems with repeaters being jammed, especially on two meters. The problem, as I understand, is very bad in cities in Southern California.

> Demanding that the FCC "clean-up" the ham bands
> is a very bad idea.

No new regulations are being asked for. All that is being asked is that the FCC enforce regulations that are already on the books.

Of course--and that assumes that one actually learned enough in the initial
study to actually understand what it is that he needs to "look up", right?
I presume you are astute enough to understand that one can't do that by
reading from a prepublished question pool over the weekend or whatever,
lacking some serious previous experience. And today, there's no requirement
to actually know anything at all--just match up 70 % of the answers to their
correct questions--all which you have been scrutinizing for the past couple of
days
with that very objective in mind. It's clear that many, if not most, people
today
pass the ham exams without serious learning having taken place at any level save

the required memorization of word associations. I'm speaking from 8 years of
experience as a VE.

I got interested in ham radio by listening to the weather nets
on 2m on my scanner. In general, there is better behavior on 2m and
70cm than on the CB bands, but there are always exceptions. VHF/UHF is
used quite a bit for volunteer/support activities, meaning that the
people involved (and who use 2m/70cm) are helpful, and mindful of good
radio techniques. They are in it for reasons other than trash-talking,
and find that kind of behavior unacceptable when they are out serving
their community. There are exceptions, of course, and if you read a
few day's worth of posts, you'll get an idea of who, when and where
the poor operators are.

Pete.

People are people. But people do behave differently in different places and situations. They may holler and paint their bodies weird colors at a football game on Saturday, and then clean up nice and behave respectfully in church on Sunday. People tend to live up, or down, to the level of behavior expected of them by their peers. It is the same in CB and amateur radio.

In general, CBers do not use their real names. They are like a masked mob, and tend to behave as members of a mob. This is acceptable to their peers. But in amateur radio, we are expected to give our "true names" (our call signs) frequently. Our peers demand it. So we tend to behave more the way we would if asked to speak publicly to a civic group made up of our neighbors.

Expectations are a bit different in amateur radio than in CB, and hence the behavior is a bit different. There are some excellent CBers, and some rotten hams. All kinds of people become CBers or hams. It is a cross section of society. Many hams like to think of themselves as better than CBers, but most are not. They just behave differently because the expectations of the two groups are different.

Hams aren't necessarily smarter than CBers, but they often are more knowledgeable about radio and how it works. Hams are authorized and encouraged to lift the lid and tinker with the guts, so they want to learn how to do it well. It is in many ways a craft, and craftsmen take pride in their knowledge and skills.

The Tech test is not difficult. You can learn enough to pass the test by reading a couple of books. You don't have to be an engineer or have a very high IQ. But understand that the learning is just beginning when the tests are passed. Amateur radio is a lifelong journey. Passing the exams is just the first step to gaining a mastery of the craft. There is more to learn and do than a person can absorb in a lifetime. That's what it is really all about. Those "Ah Hah" experiences when you finally understand something that has eluded you are among the sweetest pleasures you can have.

Remember Dick, it's an ARS ENTRANCE exam, not a graduate degree. I used
word associations to pass the general exam back in 1952. Being a ham
lead me to a EE degree and 40 years experience in electronics so
memorizing some word associations to get started was not all that bad.
And I still don't try to store it all in my head. I have a personal
library. Knowing where to find it is indeed as good as knowing it.

Never tried using this in thick applications, after all, the stuff was
designed to work in very thin coatings. It might start to act as an insulator
beyond a point, and a goog air flow may be better.

I see that someone has already offered to send them to you. For future reference:

The ARRL member's web page features all QST Product Reviews from 1980 to present.

Go to http://www.arrl.org/members-only and register. Have your membership ID # handy the first time you log on. You can then assign yourself an easy to use password for future logins.

That's right. Most people use way too much thermal compound. The best thermal compound is several orders of magnitude less thermally conductive than metal. It's also several orders of magnitude better than air. So the objective is to replace air, not metal, with thermal compound. The ideal amount is just enough to fill the tiny air gaps (from surface roughness), but not enough to separate the areas of metal that actually make metal-to-metal contact.

Roy Lewallen, W7EL

Source record: 155634

I thought 2m wasn't much different than 11m (CB) until I hooked up a CB last fall and began listening. I'd forgotten just how bad CB can be. We've got a few guys who believe they "own" a couple of channels due to their power output and antenna height. And they feel like they can use any language available to their limited vocabularies. My "litmus test" for fun radio communications is whether or not I'd listen to a channel or frequency with guests in my car (my boss or colleagues unfamiliar with personal comms beyond cell, pagers, etc.). I can't say I would have certain 2m frequencies or repeaters but I'd definitely not turn on a CB (or 75m phone).

Good job, Mark. I'm guessing people like Masataka, Rambo (Drew Durrigan), and Burt are telling you different (I have them filtered out but I see others referring to them). You'll find ham radio has the same cross section of people as in real life, don't worry, you'll fall in with the right crowd and not be reduced to living to flame on newsgroups.
Have fun and upgrade when you can.

Don't worry about the bitter old nay-sayers who sometimes lurk on this
netgroup! I was in your shoes not very long ago (Sept, 98) and I'm
having a ball. And Yes, you can just say your call on 2m and that
you're listening and you'll get a lot of friendly responses. You'll
usually get a lot of friendly advice as well once you've let on that
you're new to ham radio. I recommend that you find yourself a 2m HT
with around 5 watts of output and a few memory channels to get you
going. (Don't get one of the low power sub-mini's as a first HT). HF
is also a ball -- It's just different. Like Vanilla vs Chocolate

ice-cream -- both are great, but they each have their own attraction. I've since gone on to get an Advanced ticket, since that really gets you a lot of HF bandwidth to play with. When you work your first DX, you'll be hooked! (I think that working DX is just like fishing, without the scales).

In summary -- You'll find many good people on the bands. Just ignore the toads if you encounter one. (There is a much higher fraction of great folks on the bands than you'll see on this netgroup. In each case, just remember what they said about the school-yard bully: They try to get a rise out of you in order to make themselves feel superior. The truth is that they often have serious self-esteem problems which lead to this antisocial behavior.

Get on the radio!

Curt Breneman

So true.
The hams you meet on the air define dull.

My non ham daughter, Coral, was listening to 10 meters and I asked her her reaction and she said this, "When you look up boring in the dictionary it should have a picture of a ham radio."

So many new hams (and old hams like me) got their start in CB that it would be difficult to say that hams are "a better class of people." We're pretty much the same people. But ham radio provides an environment for a better class of behavior. Overall, I'd say hams have more respect for the quality of their radio service... but there are exceptions both in CB (good ones) and ham radio (bad ones).

Pick up a copy of the study guide "Now Your Talking" by the ARRL. It's available on the ARRL web site http://www.arrl.org, and probably from your local Radio Shack. It's about $20, and contains everything you need to pass a Technician License test. You can also search the ARRL web site for a local club that teaches ham classes.

Here in Raleigh, North Carolina, we teach two classes a year, with 15 to 20 students per class. Over 90% of them earn their Tech license. I'd say yes, it takes a lot of studying for a few weeks before you take the test. Then you keep learning, but it changes from work to fun! You do NOT have to become an expert in all the material in the book. You just become familiar enough with it to recognize the correct answers in a multiple choice test (and all the questions and answers are in the back of the book).

So I'd say go for it! If you like radio communications, you'll like ham radio. Good luck,

Gary KN4AQ

Thanks. I must say that I never thought of it that way. Nothing iritated
me more that this incident with idiot people:
This past summer we were still living in Ohio (We are in Maryland now) and
we had a rash ogf bad weather (Tornado season was horrible). Everytime the
weather net would come on some idiot (that is a really kind word) in the
area would get on during the net and interfear with the transmissions and
just make all kinds of rude and uncalled for comments to the people that
were trying to get out the information.
As anoying as they are here I guess it could be worse...

I have no desire to argue _way_ off topic with an_ idiot_ about the US
government's supposed complicity in the holocaust. Maybe I should post
here about books on US slavery that attempt to place blame on every
white person now living? It would make about as much sense as yours
and burp's mindless babble.

BTW: Since you are _SO_ concerned about past atrocities please list
here what you're _currently_ doing about the ethnic cleansing going
on in Bosnia ??

The Kenwood FTP site has some info on changing the battery.

I didn't want to pay the high Kenwood price for a battery. I just got a AAA battery holder (holds 2 batteries for 3 volts) and mounted it inside the lower cover. I cut the original battery leads and soldered the holder leads to them. It works fine but only lasts about 2 years before replacement is required, but now replacement is simply slipping new batteries into the holder. No matter how you replace the battery, be sure to turn the rig on and off after replacement or the new batteries will be drained quickly. My old battery came out without much problem and I don't remember if it was tape or glue. But if you think you're going to break the board I'd just cut the leads, leave the old battery in there, and solder the new battery to the old leads.

Selling/swapping, Kenwood TS 680s, HF + 6M with new fist mic, nice set,
works well.
Also MFJ 969 HF + 6M ATU very good condition.

No interest in transmitting, returning to listening HF & SWL

£450 the pair, will consider swap/px for anything interesting of Racal
origin.

Carriage extra, UK replies only please by email to;

You'll have to ask your Government regulators...Industry`Canada..
on rules of setting up an AM station....BUT I can tell you to cover
that distance, you will need about a 50 KW station in the highend of
the band (near 1600-1700) and good luck on doing that!
Would do better trying to put a FM on but even that would require
a 100KW at 2000 ft to cover that distance.

Cross-posted to: comp.sys.palmtop.pilot,rec.radio.amateur.misc,rec.radio.amateur.digital.misc

I've put together a small program that runs on Palm computers that
does the following:

- does Ohm's Law calculations,
- calculates the length of a dipole antenna,
- displays the resistor/capacitor color code, and
- displays the QRP calling frequencies.

Granted, it doesn't do much right now, but this is only release 0.1,
and I plan on expanding the number of utilities it offers in
subsequent releases. The purpose of this release is to see if there's
any interest out there in such a program and get some feedback for
features to implement. As hams, we all know how useful feedback can be.

A description of the program can be found at:

http://qtb.com/danr/hru01.html

as well as a link to download the program.

Excellent! How 'bout adding a feature to predict AO-27 passes
from a given lat/long? Well, ok, that's maybe more than just a
"feature"... ;^)

It varies from state to state you might want to tell us where you live. Or contact the motor vehicle department for your state and ask them. In Colorado you just fill out a form and send it and a copy of your license to the motor vehicle department. They then send you a bill for $2 and in about 10 weeks you get a letter telling you where to pick up your plates.

I love it.

> Do you have any pro and cons on the 746?

It's pretty easy to use. I learned just about all the options except
the memory keyer stuff in about 15-20 minutes while playing with one in
the store. The dual passband tuning works great. The filter options
are better than average. The receiver seems to perform well with strong
adjacent signals. The RF speech compressor works well (a friend of mine
in another state has one too, and I've heard his).

The manual has lots of mistakes. I wish they had supplied DIN plugs for
the rear connectors. The dual passband tuning indicator reads
backwards.

> Is there a home page for the 746?

Probably, but I never visit those things.

I hope someone can help me with my TS930S
When I turn on the power, all lights come up including the digital display, but no reception. The tuning knob doesn't do anything either. If I leave it on for a period of time, which varies between 2 and 20 minutes, everything comes back up.
Turning the power switch on/off several times also does the trick.
I heard that this is a known problem of dry solder in one of the PCBs.
Can someone help me with this?

Vasan

Publishing technical manuals is in their original charter:
On January 29, 1915, the Connecticut Secretary of State recorded the incorporation of the League under the following three articles:
Article 1. The name of said corporation shall be The American Radio Relay League Incorporated.
Article 2. The purposes for which said corporation is formed are the following, to wit: The promotion of amateur radio, the organization of amateur radio stations, the promotion and regulation of amateur radio intercommunication, and the relaying of messages from station to station, and the printing and publishing of documents, books, and pamphlets necessary or incidental to any of the above purposes.
3. The said corporation is located in the town of Hartford and the State of Connecticut.

We participate in a self-taught technical hobby/service; not a day should go by w/o us gaining new knowledge WRT to electronics. The only publications I have always been able to turn to when questions arise which need immediate answers are the League's pubs.

For some 80 years the ARRL has produced a handbook written so that even a novice can learn and understand from it. The government thought so highly of the Handbook that it was used to train military communicators during WWII. For the longest period, the Handbook was the greatest selling technical book ever published, in and out of ham radio.

During the 50s when SSB was finding its way into ham radio, there was no pub one could turn to to learn about this new mode except the League's SSB Manual. Also during that decade the FCC relaxed the regs regarding mobile operation - no one else published a mobile manual except the League.

To whom could you turn to for the great ideas and techniques that appear in the Hints and Kinks booklets? Propagation and antennas: The Antenna Manual. Who else in the 60s produced a VHF Manual? And when that VHF crowd began exploring FM: The FM and Repeater Manual appeared. The very first book in the 80s devoted to amateur digital comms was the League's Get Connected.

Publishing affordable technical books was one of the original goals in the League's charter; for 80 years they've made information available to the layman that was nearly impossible to find elsewhere. How in the world could you possibly find fault with this concept? I'm tempted to question your desire to read in order to gain new knowledge.

Every ham shack I've ever visited in the last 30 years has had many League pubs on its bookshelves. We are (or at least were) a group with a voracious appetite for reading and learning. Luckily, the League has been able to feed us what we most desired.

Ham radio and reading are inseparable. A big thank-you to the League for building our knowledge.

I did not write that question. For some odd reason you edited out the author and made it look as if I asked the above question. Be more careful with your editing and the placement of attribution lines.

Minus a space, too. There used to be a ship's operator with a fist like
that. He'd call us with his inbound and outbound Honolulu traffic and I'd
do my best to pass him off to NMC (San Francisco) or NOJ (Alaska), or
KHK on the north shore of Oahu. The poor fellow just didn't know
about the proper placement of spaces between characters - a real QLF.

I think what you need to do is remove the covers and check all the plug and socket wires going to the PC boards...pull them and reinsert them, being very carefull as to not damage them. I am almost willing to bet that is your trouble.

Another thing you can do to save your self a lot of pulling and plugging is to get a hold of plastic knitting needle and with the radio going simply go around carefully probing each wire and its connection. Once you think you hit the sore spot. you can zero in on it and perhaps spray some of that radio shack cleaner on the contacts before replugging them in. Common problem, not to worry.......Jim

5361. ANOTHER HT QUESTION

The only HT I have owned or used has been the HTX-202. I was told by a local ham that there is a general rule of thumb - the wider the freq. receive range - the greater the chance of front end overload on the ham bands. I have been considering acquiring one of the super wide receive 140/440 talkies but am now concerned about overload and distortion. Is this "general rule of thumb" something that was true once and is no longer true, or are the wide band talkies bad news? The 202 is tighter than a mouses ear.

On 2 mtr. you will find groups of people as stupid sounding as any on CB, without the cursing. You will also hear very intelligent sounding people having interesting conversations. Find someone who will let you listen to their radio or listen on a scanner and see what you think.

It's not the class of people or the class of license that matters, it's all about operating in a way that doesn't lessen the enjoyment for others. Part on The Amateur Code that is ignored by way too many operators.

If you want to hear the real Big Strapping CBers, listen on 75 mtrs. That's where the Good Buddies hang out.

Good luck, have fun.

Wakefield (was EG&G Wakefield) has a non-silicone oil-based grease that
we've found to be significantly better to use around optics; it creeps
far less, and is easily cleaned off of optical surfaces with acetone.

of course, it appears that some of the guys that cause trouble in amateur radio also cause trouble to other services.

the problem will be not letting the bad guys let their behaviour set the meaning of the words "amateur radio" in much the same way as "hacker" now has an unsavory meaning..

Get the FCC to seize K6FU's amateur radio equipment and you will indeed save
7258 kHz LSB. Greg Marshall is without a doubt the most disruptive operator on
this frequency.
Good luck; you have my sympathies (and my support). 73.

No such radio exists, because it would be ILLEGAL!

You're a tech plus, that's what is worrying me!

Several good choices here...Uniden's late, great HR-2510 is probably best if you can still find one. Otherwise, the Ranger, RCI-2950/2970, Galaxy, or Emperor should work well for you.

>a
>ANY life at all?

The answer to your question should be obvious if you've spent much time reading CBRAMBO's worthless posts in this and other newsgroups. CBRAMBO, a/k/a Drew Durigan of Hays, Kansas (call Southwestern Bell if you REALLY want to know where he lives) has absolutely no life beyond his PC and his "good buddy" Eric Oyen, which comes as no surprise. Why would ANYONE want to have anything to do with this loser? The only way Drew can get any attention is to sit at his PC all day and post crap in the newsgroups just to try and agitate people. As long as the asshole gets responses, he will continue to waste his life on worthless pursuits such as chasing Eric Oyen and making silly, inane statements like "ham radio is dying" with, of course, no proof to back up his generalizations. Drew will, in post after post, criticize and attack the amateur radio hobby one moment, and then tell someone to change their screenname because it's disrespectful to "imitate" a "silent key" the next moment. Drew will cry "LAWSUIT!" any time someone says something about him in a public forum which he doesn't like, and then attack Eric Oyen for an unfounded blackmail allegation which Oyen made over two years ago. In short, Drew Durigan is the perfect example of a paranoid RADIO CRYBABY, and as such he belongs on 11 meters with the rest of the paranoid RADIO CRYBABIES who act like asses on the radio (and on the Net), and then whine and cry when someone criticizes their behavior. If everyone in this newsgroup would quit responding to Drew's posts, the jerk would probably go back to rec.radio.cb where he belongs.
By the way, congratulations on getting your Technician license. I am studying to get my Technician license and hope to join you on the amateur bands shortly. Despite what CBCRYBABY says, there are still plenty of people who are interested in the amateur radio hobby.

"Where's all the RADIO CRYBABIES?"

Greetings,

I know these questions most like have been answered before, but I missed them. I am looking for input from owners of the 746. How do you like it? Do you have any pro and cons on the 746? Is there a home page for the 746? I saw there was one for the 847. Thanks in advance. 73, HAPPY HOLIDAYS. Stuart KB8VIY

You could reprogram it fast enough, but the problem is whether the
PLL settling time would be fast enough, not whether the code ran
fast enough.

Ed ... I don't believe I stated that all digital QSOs are inaudible ...
just that many go unheard at many locations because they are
inaudible at those times/locations. Besides many folks don't
realize that many digital waveforms sound like "noise" not like
CW or conventional FSK RTTY ...

>were applied to Morse decoding.

As Gary has pointed out with considerable clarity, it's impossible
to perform "the same filtering techniques that are normally applied
to those digital modes" to OOK Morse signals ... those techniques
(matched filtering, etc.) are only possible when using uniform symbols
and full-voiced modulation ...

And Gary has also demonstrated mathematically that even simple FSK
can have about a 9 dB weak signal advantage over OOK Morse.
9 dB is significant ... especially when one considers how steep the
BER vs. Eb/No "waterfall curves are between 10-2 and 10-8 where
a dB or two can easily make a couple of orders of magnitude difference
in BER ... the "within a few dB" phrase belittles the advantages to a
degree that is missleading at best.

>> Give the Morse Myths a rest, they were worn out YEARS ago.
>
>I agree, but let's not create a few new myths in the process. . .

I'm not creating any myths ... just stating facts. There are well-known
digital modes that FAR outstrip OOK Morse in weak signal performance
and reliability and there is no technical of economic reason that hams
could not/should not be using them in place of Morse.

Ed,

First, it is by no means a given that it is "most likely that they can make
significant technical contributions to the state of the art" only on, or even
on,
the VHF/UHF frequencies that no-coders/slow coders are effectively
limited to ...

As I have pointed out, there are many possible advances that can ONLY
be accomplished, tested, and proven with reasonable access to our HF
spectrum, due to the unique vagaries of skywave propagation.

Finally, it's pretty clear that for many, if not most, one of the major
attractions
of ham radio is its ability (at HF) to span continental and intercontinental
distances. To withhold access to those bands from all but the Morse elite
is unjust and counterproductive in that it turns off many competent would-be
contributors and creates a caste of (falsely considered) 2nd class citizens ...

Yeehah! This is more damn fun than the jamming parties on 14.313 when W1GM and K4MME were alive and licensed (too fuckin' bad they're dead and revoked). Does anyone know if "Raincoat Charlie" or the "ooooolaaahhhhh" dude are in there?

I think amateurs ought to develop operating skill through resistance to jamming. But we need better jammers on 3950. Music and cussing don't work. You jammers need to use more white noise! Feed some zener diode noise into an op amp, then into your mic inputs, then you can really tear up a frequency! Also, try some heavily clipped human voices, looped on tape or computer, to beat down the folks using DSP.

That net can be wiped out by proper application of interference. BTW, I suggest not lingering and getting caught - the Feds will revoke yer tickets and fine the livin' shit out of you...

5399. How To Make A Jammer

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-16 00:00:00 UTC
From: Phil <dredbyte@concentric.net>
Message-ID: <75a2be$q75@chronicle.concentric.net>
Source record: 155469

Tell Mr. Hollingsworh of the FCC to fuck off in the only language he knows! Jamming!

Come on out of the woodwork, guys! You jammer wannabes can make a fine white noise jammer by feeding a simple 6 volt zener diode in reverse, and amplifying the white noise occuring at the junction. Just a couple of milliamps of reverse current is enough. Then feed it to an op-amp stage, then into your mic input.

Then you have a big-time jamming radio. Tune in your target and go key down...

Never be afraid to cast the first stone...

70 quite common? Yikes I thought I was doing good hanging in there at 35 wpm. Of course the worlds record Im pretty sure is still at 75 wpm so if 70 is common should be a shoe in for someone wanting thier name in Guiness World Book of records.

>Carl - wa6vse

It's not technical or economical Carl, CW is used by most of it's enthusiasts because it's just plain fun. Sure, some such as moonbounce or QRPp need the weak signal advantages, but most of the QSO's I hear are just hams having interesting conversations on a traditional ham mode. That's what a hobby is for Carl, to have fun. Different strokes, ya know. Using those well known digital modes *in addition* to CW is more in keeping with a well rounded hobby for all interests...

(Ever wonder why rich movie stars keep those expensive antique cars along with their new shiny models?)

Why would you need 50W??? I'm using a converted CB on 10m CW - I'm
able to squeeze 8W out of if and am working the entire Pacific
with it.

Why not put your amateur privileges to use and build a radio for
10? Lots of fine circuits have appeared in the Handbook and QST over
the years. Or do what I did - convert an 11m rig to 10. Hamming is
much more fun when you use something you've built or converted.

Why stop at Morse? Voice broadcasts began in earnest in 1907 - during
that year the U.S. Navy outfitted 35 of its ships with phone equipment. In
1908 broadcasting began from the Eiffel Tower in France. Morse and voice
via radio are both over 90 years old and differ in age by only a few
years, yet I'll bet those who like to call Morse "ancient technology" use
phone for a good portion of their communications.

>>But you see, those regulations are the same ones that consider CW essential.

>NOWHERE in 97.1 ("Basis and Purpose) does it say Morse is essential.
>In fact, there is no mention of Morse whatsoever in 97.1.

Ah, but 91.1(e) is quick to point out the amateur's proven ability in
the area of international goodwill. What have you done in the last 20
years you've been a Tech to satisfy 19.1(e)?

As Jones pointed out, the regulations do state that CW is essential,
for knowledge of code is required by those rules in order to gain access
to HF.

>to know where he lives)

Congratulations on uncovering this top-secret, highly-classified information! How DID you do it, Detective Burnz? I mean, it's not like it's in the freakin' WHITE PAGES or anything. Just for your future reference, and for anyone else who cares, here is the entry in it's entirety:

Durigan, Drew A.
304 E. 22nd St
Hays, KS 67601
(785) 650-0052

What an amazing discovery! Now, will you please share your newfound secret with your buddies? You know, the ones who keep posting "my address" in places like Orlando and Ocala, Florida. This despite the fact that I have told them repeatedly that their sources are incorrect. Maybe they'll believe you, Mr. Burnz, since your credibility is so much better than mine. The truth is out. I'm here in Hays, Kansas. Here I am! Come get me, "FRNKBURNZ!"

>has absolutely no life beyond his PC and his "good buddy"
>Eric Oyen, which comes as no surprise. Why would ANYONE want to have
>anything to do with this loser?

Let the record show that "FRNKBURNZ" brings up Oyen's name...despite no previous mention in this thread. Why?

>The only way Drew can get any attention is to sit at his
>PC all day and post crap in the newsgroups just to try and agitate people.

I have an old MFJ VHF converter I am looking to get rid of.

This thing plugs on a 2m HT and allows it to receive from 154-164 MHz.
Obviously, with most of the newer radios, this isn't much use anymore,
but I will sell it cheap if some one has an old radio they could use
it on.

Send me email...

RE: OPTOCOM COMMUNICATIONS RECEIVER

I just received the 22 page "Test Equipment Product Catalog" from
Optoelectronics, Inc., which the
covers states contains: "all new products inside!!"

I read with interest about the Optocom Communications Receiver on page 6
(with FAQ's on page 10) and
wondered if anyone had any comments, information or experiences with this
receiver.

According to the catalog, it is a PC controlled communications receiver
capable of Trunk Tracking both
Motorola and LTR Trunked systems on any frequency, and using the supplied
TrakkStar software you can
set up multiple trunked systems as well as conventional frequencies for
scanning simultaneously.

The catalog says it decodes CTCSS (PL), DCS, LTR, DTMF, and Motorola talk
group IDs.

The receiver covers the following frequencies:

25 - 520 MHz
760 - 823.995 MHz
849.005 - 868.995 MHz and
894.005 - 1300 MHz

Cost: $ 549

If you know anything about this receiver, please let me know.

If you're interested, E-mail me and I'll give you the address, phone, fax,
E-mail and/or URL for
Optoelectronics, Inc.

Query, Why would you deliberately post a response entitled "I hope
all public services will be in digital, like Clearnet PCS Commercial
Service" in a area where people enjoy the scanning hobby? Are you
making an accusation towards me that all people use scanners to commit
crimes. Did you come here to start a flame? Maybe a Jhon Mackey
wanabe. It confuses me why you logically want the entire government
to go digital? You would never know what goes on in you community.
Or maybe you got one of those digital decoding scanners and you want
to try it out?

Ah, you have that backwards. Voice communications has stood the test
of time. For thousands and thousands of years, people have depended
on voice communications. Only for a relative handful of years did people
depend on Morse telegraphy. As soon as it was technically possible,
people switched from telegraphy to telephony on the landlines and on
the radio. Telegraphy was just a poor stopgap technique. Its window of
viability was narrow, and relatively quickly closed, as technology rapidly
improved and allowed the time tested technique of voice communications
to be used by wire and radio.

Which 100 kHz would that be? It can't be the 100 kHz between 50.0 and 50.1 MHz because Techs are allowed there. And it can't be the 100 kHz between 144.0 and 144.1 MHz because Techs are allowed there. Those are the only band segments set aside exclusively for CW use in amateur radio. Check 97.305.

>I really
>question the need or wisdom of dumbing down the Amateur Radio Service in the
>US by reducing the code speed requirement for Extra.

There's nothing dumber than emulating a modem. Like John Henry racing the steam drill, you're always going to lose. The idea is to work smarter, not harder. Working hard instead of smart is the true dumbing down. It brings you down to the level of a piece of hardware.

>If they want to do away
>with the Tech Plus and Novice licenses, fine... if they want to lower element
>1B to 10 wpm fine... but I feel that element 1C should remain at 20 wpm. I
>seriously see no reason to reduce it, and only need to look at the debacle
>that is CB Radio to know why dumbing down requirements is a BAD idea.

Where did you get the idea that CB requirements were "dumbed down"? There never were any requirements to dumb down. Yet the CB service was a well behaved service for the first 15 years of its existence (hint, the period during which the FCC was still doing its job enforcing the regulations). Licensing exams never had anything to do with it, and they've never had anything to do with it in amateur radio either.

Extras have received a disproportionate share of NALs throughout the existence of the Extra license. As a percentage of their class, more Extras receive NALs than any other amateur class. What does that tell you? It says to me that Extra selects disproportionately for driven Type A personalities. Those are the ones who disproportionately get into trouble. It is a become top dog at any cost mentality, and that doesn't earn many awards for sportsmanship.

>If the extra privs of Extra Class were really incredibly significant that
>would be one thing. However if they are not going to be using fast CW they
>really only gain 75 khz, in 3 25 khz blocks, of spectrum.

And four blocks of 25 kHz each for RTTY and data.

>All my life Amateur Extra Class MEANT something... it was a hard goal to
>attain and as such there was a feeling of accomplishment in so doing. That
>is why I worked so hard to attain that class of license. Code was not easy
>for me... I worked like hell every step of the way.

Fine, the ARRL offers certificates if you want a hard goal to tackle. It isn't the purpose of licensing requirements to provide you with a hard goal. The purpose is to satisfy the regulators that you know what you have to know to operate safely and without causing harm to others in the area where you are being authorized to operate. No more, no less. That's what any government licensing exam is supposed to do, in any field. Licenses are not supposed to be merit badges, the Boy Scouts hand those out. Licenses are access permits to public resources, be they highways, airways, or spectrum.

5431. Amateur Radio Crackdown

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-16 00:00:00 UTC
From: save7258 <wd6cfj@yahoo.com>
Message-ID: <3677D125.D109357C@yahoo.com>

FCC ENFORCEMENT HONCHO DONE "TAKING NAMES"

The FCC's Riley Hollingsworth, K4ZDH, is making his list and checking it

twice. And now that he knows which hams are naughty, not nice, he's ready to take enforcement actions against the most flagrant amateur offenders.

"Fully half of the amateur problems on HF relate to a specific group of jammers--malicious interferers who apparently enjoy disrupting as much amateur communication as possible," said Hollingsworth, the FCC's point man for amateur enforcement within the Compliance and Information Bureau. "Enforcement action against this group is long overdue."

Coal could be showing up in some Christmas stockings. Hollingsworth has prepared a report to his boss, CIB Chief Richard D. Lee, detailing his findings and fingering the most serious violators in a "top 10" list which he declined to make public just yet. His memo urged "immediate enforcement action."

Hollingsworth said he's talked with more than 250 people on the amateur enforcement line (202-418-1184) since the end of September, when the FCC's latest amateur enforcement initiative kicked into high gear. In addition, he has received more than four dozen letters and e-mailed comments concerning problems in the Amateur Service. Hollingsworth has concluded that, while most amateurs abide by the rules, a few habitual offenders continue to flout the law.

"We are not going to stand for the Amateur Service to be further degraded or destroyed by them," he said.

Hollingsworth says that jamming and deliberate interference is the most common problem, accounting for 31% of all complaints. Repeater misuse and jamming account for another 29%. But he considers the HF abuses--most typically reported on 75 and 20 meters--to be the more serious offenses because they can be national or international in scope.

Other general problems accounted for another 17% of the complaints, Hollingsworth said. A full 10% of complaints concerned an unlicensed individual in California who already has spent time in jail for past convictions.

Hollingsworth has sent out 30 informal "warning letters" to individual operators as a result of complaints. The letters warn the recipients that a complaint has been received about the recipient or someone using his or her call sign, indicate that the allegations--if true--could jeopardize the amateur's license, and request the recipient to contact

the FCC to discuss the matter.

"In almost every case the recipient has contacted us," he said. "In one case, the licensee contacted us, apologized, and reports since that time

indicate that the licensee has become a model operator." Some amateurs have reported to the ARRL that amateur behavior has improved--dramatically in some areas--since word hit the street that the

FCC was taking amateur enforcement seriously. For its part, the League has said it is willing, for now, not to pursue its request to further privatize amateur enforcement.

Hollingsworth says the warning letters will continue, but now he's taking aim at the hard-core scofflaws within the Amateur Radio community. "We have now let everyone out there know we're back," he said. Continued violations will "guarantee" license revocations, fines, or--in extreme cases--equipment seizures.

"Church is out now," he said. "We mean business and we're strapped in and ready to ride." Hollingsworth said Amateur Radio rulebreakers "continue these violations at their own risk."

Its a darn shame that it had to come to this. If us Hams were not so darn cheap we would have supported the FCC in their efforts of trying to monitor the Amateur Radio parts of the spectrum on a more regular basis. No one will ever do the monitoring job in the same way.

I take my hat off to all the Official Observers who take the time to monitor.

Give the guy a chance. CB's are cheap and plentiful, so more of the general population has likely heard CB's than Ham's. At least he's interested in the hobby, and what's involved.

As a matter of fact, I like to compare CB radio with AOL. It's so easy, anybody can use it.

Hi,
I have an idea about designing a FSK TX with a PLL
frequency synthesizer like the Motorola MC145170 or National LMX2316
with serial interface for programming purpose. The data rate is
relatively slow, 1200bps. My question is, is it possible for me to
re-program the R or N counter (with a fast-enough MCU) in the PLL chip
for every bit to do FSK modulation? What is the effect on the output
signal when I program the PLL chip in the middle of operation? How
feasible is this approach?

Artur

Exactly! Playwright Charles Ludlum once said that there was no subject matter
so serious that it couldn't be joked about.

...and I've seen a lot worse stuff on South Park.

In 1986, there were jokes about the Challenger disaster. In 1993, Howard Stern had a number of jokes about the fiery end to the standoff in Waco, TX. (Which ended up on packet networks that afternoon, and to which a number of hams voiced their offense.) Last year, there were jokes about the death of Princess Diana.

This type of humor has been around for a long time, and will continue to be around as long as human tragedies occur.

>Artur
>12.16.98

Feasible for very low data rates and modest deviation. I seem to
remember a range of PLL synths that support swapping between two
register sets for fast response but I can not recall who from - it may
actually have been a DDS rather than a PLL.

I am not sure how much distortion you will get at 1200 but I would
have thought significant.

If you have an AC signal (no long strings of one's and zero's you can
modulate the varactor of the VCO and set the PLL loop BW very much
lower than your lowest freq component of your data. Manchester or
other encoded data formats help in this sort of application - as they
gaurantee a transition every bit.

For low data rates you can modulate the reference crystal (presumably)
oscillator by adding a shunt varactor and usually a series inductor.

Alternatively, look at a technique called two point modulation which
allows modulation down to DC.

In the past I have found that the PLL output and hence TX phase noise
is noisy during the brief programming phase - it may have been the PLL
chip I was using and is probably related to digital crosstalk. (For
lowest noise applications I isolate the PLL serial bus to the PLL when
I am not programming it to reduce this.)

inaudible is also malarkey.
Perhaps you are not active on HF so you don't realize that HF
propagation doesn't work that way.

As would OOK Morse (or any other OOK mode), within a few dB, if the same filtering techniques that are normally applied to those digital modes were applied to Morse decoding.

If, as you have alleged, all these hordes of qualified engineers want to get into ham radio but are not doing so because of the Morse code test, why would it not be enough to have access to the frequencies where it is most likely that they can make significant technical contributions to the state of the art?

If that is not enough, why IS it enough to have access to HF where they can join the ranks of beepers, gamers and DXers that you so clearly denigrate?

Now, Cecil, I never would have pictured you as a rumor mongor. . .

The ARRL's investments are outlined in each ARRL Annual Report. They are actually reasonably modest. They are intended to ensure that our long-term goals are not compromised by short term fluctuations in revenues.

Most of this investment is based on the revenues we have received over the years from life members. This, IMHO, represents sound policy. If the League kept signing up life members and then did not ensure that the funds were available to service those members over the years, this would not be the proper way to conduct a membership-services organization.

I haven't read the annual report. Just how much cash could the
ARRL come up with and is that typical for a "non-profit"
organization? I'm not criticizing the ARRL for taking advantage
of existing laws - just trying to ascertain the truth.

Uniform symbols and a priori known timing are required for match filtering,
which aren't provided by OOK Morse, but fully voiced modulation is not
strictly required, though it does offer a substantial decoding gain.

>And Gary has also demonstrated mathematically that even simple FSK

Exactly. Those few dB can make the difference between essentially
perfect copy and no copy in marginal situations. When situations
aren't marginal, of course, you can use analog voice or other techniques
which aren't as well suited to weak signal conditions.

5455. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <75b8u3$qq8@news.Hawaii.Edu>
Source record: 155407
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6OO, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Seems that function is emulating a microphone and speech
recognition software, not a modem. It's all done at baseband.

Oh come now. ILLEGAL radios don't exist? My unlocked ICOM-706 covers
10m and CB just fine. On lowest-power AM it puts out about 4 watts.
I don't use it for CB and yes, it is illegal to use it on CB, but
it certainly exists.

> You're a tech plus, that's what is worrying me!

Seemed like a reasonable question to me. OTOH, your answer was false.
What class license are you?

Hello, I'm looking to buy the PC programming cable for the ICOM Q7A/Yaesu VX-1R/IC-W32A/FT-51R line of radios. This cable is supposed to be compatible with this latest bash of mini-HTs. I do not need the software, I only need the cable (with the RS-232 on one side and the jack which goes into the radio on the other.) If you have one, please email me.

Thanks, 73

We have the main programming cable for $25.00 and the 4conductor adapter cable is $7.50 (plus shipping)

Trying to make a 3 conductor 3.5mm stereo plug work instead of using the correct 4 conductor 3.5mm plug can damage the radio. (We have already fixed many radios due to this problem.)

>For all the details, check out: http://www.expresspcb.com

Alternatively ... download CadSoft "Eagle 3.5 Light" for free
(for non-commercial use) from their website at

http://ww.CadSoftUSA.com

and get an autorouter and schematic capture as well, not just
"PCB layout."
(limited to 1 schematic sheet, modest sized PCB, and 2 layer boards
... upgrades to commercial versions supporting up 99 schematic
sheets 4 to 16 signal layers, and PCBs up to 64"x64" are available
for those who need them at very reasonable prices compared to
other packages of equal power and sophistication.)

PLUS .. the big advantage is that you can generate industry
standard "Gerber" files for photoploting at virtually ANY PCB
fabrication house, rather than being a *captive* of this one
specific PCB house who's offering "free software."

I don't work for or have any business interest in CadSoft ...

I'm simply a satisfied user who's owned the full-blown
unlimited commercial version for a couple of years now
and am happy with its performance, flexibility, and the
```

free tech support and upgrades I've received. (I haven't
needed the tech support much and the upgrades have
been enhancements and added features, not bug fixes.)

I can highly recommend CadSoft's products as being
capable and very price competitive. (for those who only
need to do modest sized, double-sided PCBs, it can be
totally free for non-commercial use.)

For a few years, usually on Christmas night, there was a jammer on 3894.5
that would play Emerson, Lake, and Palmer's "Oh What a Lucky Man He Was."
This happened for several years in a row, but hasn't happened in the past two
years. You'd only hear the jammer on Christmas night, and no other time
during the year. The signal would just about drown out everyone. It was like
the person was trying to start a holiday tradition.

There you go again, contradicting yourself. It was just two years ago
that you proclaimed that all microphones in your shack were unplugged
from your radios, due to phone being slow and archaic.

Telegraphy a poor stopgap? It lasted in the maritime service for 90
years, and during all those decades it was the preferred method of
communication over voice. Ship operators had a choice between
MF/HF SSB and MF/HF CW; in the four years I worked for the Coast Guard
each and every message, from distresses to medicos to position
reports to WX observations came in via Morse. We monitored the
4, 6, 8, 12, 16, and 22 MHz SSB and CW calling frequencies (plus,
of course, 500 kHz CW, and the 2 MHz SSB frequencies); SSB was only
used by ocean-going yachts, tugs, and the smaller boats in the
various fishing fleets. Ships, to the single one, used CW. You say
owners too cheap to outfit their ships with SSB? Nope. *Every* ship
I've ever visited in Honolulu Harbor, no matter what flag she flew,
had both CW and SSB equipment aboard. (I'll concede that one reason
CW was the preferred mode was due to some operators not being able

to speak English; but of course, the "Morse is not a language"
crowd will be left scratching their heads in puzzlement over that
concession.)

As a matter of fact, I like to compare CB radio with AOL. It's so easy, anybody can use it.

So let me get this straight. I guess the opposite of this would be- if something is so difficult to use only a few people use it. And that makes it better?

> fast enough.

Settling time is an issue, but probably not as important as the
overshoot and ringing. You'd have to carefully design the loop filter
to avoid overshoot while maintaining adequate bandwidth for the desired
data rate. Overshoot, by the way, is a fairly significant in most
of the PLL rigs I've looked at. They come bouncing onto channel,
often with a significant component +/- 30KHz away. If this was
happening on every data transition, you'd make other local amateurs
unhappy.

You probably couldn't use the typical single-loop topology that is
commonly found in VHF/UHF radios, but I haven't done the math to
get an idea of what the boundaries are.

By the way, my old Kenwood TR-2600A had a *horrific* overshoot, it
was clearly visible +/- 100KHz away.

Yes - the HTX-202, curently discontinued in favor of "sleeker, sexier"
designs, is one of the finest 2Meter performers ever.

The newer "wide band" units are not "bad news." Even the best of them will
blast a little intermod at you in dense city environs...if you live a little
out of the microwave/pager paths, you will do better.

The modern HTs are incredible...you will be amazed at how many "more" features
are available in smaller packages than your HTX-202. Get opinions from your
local Amateur Radio club!!!

>better?

It depends on which "opposite" you wish to use. For an "if-then"
conditional statement such as you've presented, we have the converse, the
inverse, the negation, and the contrapositive, to name a few.

Original statement: "If something is easy, then anyone can utilize it."
Converse: "If anyone can utilize it, then it must be easy."
Inverse: "If something is difficult, then there is at least one who cannot
utilize it." *
Negation: "It's easy and at least one cannot utilize it." **
Contrapositive: "If at least one cannot utilize it, then it must be
difficult."

(It's always messy attempting to apply these logic operators to
plain language.)

What you can conclude is that most times, the better things are more
difficult to achieve: a higher education, wealth, good health through
proper diet and exercise.

Merry Christ-Mass,
Jeff KH6OO / AE

* Remember, the negation of "all can do it" is "at least one cannot."
** Recall, -(p-->q) = p&(-q)

Artur
The major problems you have to face are
1. Noise during the serial programming transitions .If you have a receiver
you will hear this.
This will possibly confuse your demodulator
2. Loop filter requirements should be reevaluated . A pll has many
parameters to be taken into consideration (eg. overshoot,reference
rejection etc)
All these things are to troublesome to cope and you should have a spectrum
analyzer at least to see the results

For low baud rates try modulating your reference instead its more easy and
straight forward . Just modify your loop natural frequency so it
follows the modulation

ExpressPCB makes prototyping with PC boards easy and
inexpensive using our free layout editor.

Here is how it works:
1) Download our PCB layout editor for Win95.

2) Using this very easy to learn CAD software, design
your two layer board with plated-through holes.

3) Order your custom PC boards directly from the layout
edit using the "Order Boards Via The Internet" command.

4) Within 2 or 3 business days, an overnight courier
delivers your boards, often for under $100.

For all the details, check out: http://www.expresspcb.com

Let me offer you my congratulations and welcome you to Amateur Radio.

I don't recall the power output of the HW-101, but it would generally be
about 70% of the DC input power (multiply the plate voltage X the plate
current in amps).

music on amateur radio is illegal.

As for KT4TR, when he starts his crap by busting in on my qso's to read
his idiotic crap, then I will surely ignore him and talk over him. I
will never allow him into a qso I am in. I am not required by rule or
regulation to allow a troublemaking idiot air time.

As for K3QAM, I don't even hear him most of the time. And all he does
is be a sounding board for TR. Or play SSTV on frequency. He is just
another jammer.

I also find it amazing that my little 800 watts and full wave loop on 20
or dipole on 75 can jam anyone like TR and QAM, both run beams. Get
serious.

Tell you what Lloyd, when you upgrade to a HF license, and you get 37
years experience both professional and amateur in electronics/radio
you can talk to me about this subject. For now just stay put where
you do best, the web. Your nothing but a wanabee player in a war that
you not only dont understand, but can't even comprehend. You are being
led around by the nose by a bunch of radio terrorist"s, the stumpjumpers
and the BARF. You are just a uneducated fool.

Actually, a continuous bitstream would make morse a digital mode. A "0" would be silence, and "1" would be a tone. A single "1" bit would represent a "dit" while three consecutive "1's" would be a "dah", with "0's" filling the spaces in between.

SB PROP @ ARL $ARLP051
ARLP051 Propagation de K7VVV

ZCZC AP51
QST de W1AW
Propagation Forecast Bulletin 51 ARLP051
From Tad Cook, K7VVV
Seattle, WA December 18, 1998
To all radio amateurs

SB PROP ARL ARLP051
ARLP051 Propagation de K7VVV

Solar activity was mixed this week, with sunspot numbers up an average of about 10 and solar flux down about 9 points compared to last week. The average solar flux for the previous 90 days rose from 131 to 132, and solar flux was above this level on every day, a good indicator of a general upward trend. The active geomagnetic day was Friday, when the Planetary A index rose to 30 and the College, or high latitude A index was 52. This indicated a geomagnetic storm.

Conditions were good for last weekend's 10 Meter contest, even with the rough conditions at the start. Solar flux was higher than forecast, with the Friday through Sunday numbers at 143.1, 143.3 and 144.2, rather than the predicted 132, 128 and 122.

This bulletin is written on Thursday, and geomagnetic conditions have been exceptionally quiet, with an A index of 0. The Boulder K index was also 0 throughout the day, and the College and Planetary K index only showed marginal activity around 1500 and 1800z. Over the next three days, Friday through Sunday, the predicted Planetary A index is 9, and the solar flux should be around 145, 140 and 135.

Beyond the weekend expect the solar flux to rise back to 150 around December 28 and 29, then drift below 145 again on the last day of the year, rising slightly again the second week in January. Look for slightly unsettled conditions around December 28 and 29.

There were some interesting conditions on VHF this past week. On December 11, while the geomagnetic storm was disrupting propagation on HF, ZL3SIX in Christchurch was hearing many North American stations on 6 Meters, including N5JHV and two Mexican beacon stations. Also, VK3AMK worked TI5KD and SM0KAK/XE1 worked VK7GK on 6 Meters. On 2 Meters, WA6TBO heard the KH6HME beacon, and WP4O

reported working Uruguay from Puerto Rico.

Sunspot Numbers for December 10 through 16 were 145, 166, 142, 152,
113, 108 and 118 with a mean of 134.9. 10.7 cm flux was 133.8,
143.1, 143.3, 144.2, 144.4, 141.6 and 140.5, with a mean of 141.6,
and estimated planetary A indices were 6, 30, 6, 3, 4, 5 and 11,
with a mean of 9.3.

December 18, 1998
Target:

Welcome to the W8MMQ Wire for December 18, 1998! This newsletter is a service of W8MMQ and the Radio Society of Central Michigan, and is distributed freely each week to all radio amateurs.

If you would like to be placed on our mailing list, or wish to be removed from our list, please contact w8mmq@voyager.net. Be sure to include your name, callsign (if any), and full email address. Thank you.

In this issue: the FCC establishes a new low power fm web site; the FCC may be about to act against amateur radio offenders; the Sputkik 41 satellite is now QRT; a new "FCC-Watch" section; upcoming events and hamfests; and much more!

THE FCC'S NEW LOW POWER FM SITE
The Federal Communications Commission has established a new web site, designed to answer some of the questions regarding the low power fm radio service movement.

Also known as the free radio movement (FRM), its advocates believe that the FCC has no right to issue licenses for radio frequencies, and that the Commission violates their freedom of speech when punishment is issued for operating without a license.

The web site, http://www.fcc.gov/mmb/prd/lpfm/, contains extensive information on this movement, and the Commission's plans to look into the possibilities of establishing a "legal" low power broadcast radio service.

IS THE FCC ABOUT TO TAKE ACTION?
The FCC's Riley Hollingsworth, K4ZDH, is making his list and checking it twice. And now that he knows which hams are naughty, not nice, he's ready to take enforcement actions against the most flagrant amateur offenders.

"Fully half of the amateur problems on HF relate to a specific group of jammers -- malicious interferers who apparently enjoy disrupting as much amateur communication as possible," said Hollingsworth, the FCC's point man for amateur enforcement within the Compliance and Information Bureau. "Enforcement action against this group is long overdue."

Coal could be showing up in some Christmas stockings. Hollingsworth has prepared a report to his boss, CIB Chief Richard D. Lee, detailing his findings and fingering the most serious violators in a "top 10" list which he declined to make public just yet. His memo urged "immediate enforcement action."

Hollingsworth said he's talked with more than 250 people on the amateur enforcement line (202-418-1184) since the end of September, when the FCC's latest amateur enforcement initiative kicked into high gear. In addition, he has received more than four dozen letters and e-mailed comments concerning problems in the Amateur Service. Hollingsworth has concluded that, while most amateurs abide by the rules, a few habitual offenders continue to flout the law.

"We are not going to stand for the Amateur Service to be further degraded or destroyed by them," he said.

Hollingsworth says that jamming and deliberate interference is the most common problem, accounting for 31% of all complaints. Repeater misuse and jamming account for another 29%. But he considers the HF abuses -- most typically reported on 75 and 20 meters -- to be the more serious offenses because they can be national or international in scope. Other general problems accounted for another 17% of the complaints, Hollingsworth said. A full 10% of complaints concerned an unlicensed individual in California who already has spent time in jail for past convictions.

Hollingsworth has sent out 30 informal "warning letters" to individual operators as a result of complaints. The letters warn the recipients that a complaint has been received about the recipient or someone using his or her call sign, indicate that the allegations -- if true -- could jeopardize the amateur's license, and request the recipient to contact the FCC to discuss the matter.

"In almost every case the recipient has contacted us," he said. "In one case, the licensee contacted us, apologized, and reports since that time indicate that the licensee has become a model operator." Some amateurs have reported to the ARRL that amateur behavior has improved -- dramatically in some areas -- since word hit the street that the FCC was taking amateur enforcement seriously. For its part, the League has said it is willing, for now, not to pursue its request to further privatize amateur enforcement.

Hollingsworth says the warning letters will continue, but now he's taking aim at the hard-core scofflaws within the Amateur Radio community. "We have now let everyone out there know we're back," he said. Continued violations will "guarantee" license revocations, fines, or -- in extreme cases -- equipment seizures.

"Church is out now," he said. "We mean business and we're strapped in and ready to ride." Hollingsworth said Amateur Radio rulebreakers "continue these violations at their own risk."

(Article taken from the ARRL Letter, December 11)

SPUTNIK 41/RS-18 NOW QRT
The second mini-Sputnik satellite, Sputnik 41, went silent on or about December 10, according to reports. The little satellite, also known as RS-18, was launched by hand from the Russian Mir space station during a November 10 space walk by cosmonauts Gennady Pedalka and Sergei Avdeyev.

Sputnik 41 was powered by nonrechargeable batteries and designed to operate for up to a month. Its predecessor, Sputnik 40 -- launched in November 1997 to commemorate the launch of the original Sputnik satellite in 1957 -- continued to transmit for 55 days. The later Sputnik 41/RS-18 transmitted recorded voice beacons in English, Russian, and French, as well as a beacon tone that indicated the satellite's interior temperature. It transmitted on or about 145.815-MHz.

Sputnik 41 was financed by the Aeroclub de France to mark its centennial as part of a program of satellites made in a collaboration of Russian and French students. AMSAT-France cooperated with the education department of the Russian Aeronautic Federation in this most recent Sputnik reprise.

Reception reports go to AMSAT-France, Sputnik 41/RS-18 QSL Manager, 14 bis rue des Gourlis, 92 500 Rueil-Malmaison, France. Reports should include a 5x7 self-addressed envelope and two IRCs. An updated list of reception reports received by the French QSL manager is available at http://ourworld.compuserve.com/homepages/ascerland/sp41QSL.htm. The page lists reception reports from some 40 countries around the world.

For more information, visit the 1998 International Year of Air and Space page, http://www.ccr.jussieu.fr/physio/Satedu/sputnik41.html.

(Article taken from Amateur Radio Newsline, December 15)

FCC-WATCH: RECENT COMMISSION ACTIONS
This new section is designed to keep you informed of recent actions taken by the Federal Communications Commission, relating to various radio services.

In its December 16 Daily Digest, the Commission announced that it has shut down 19 unlicensed broadcast stations in Miami, Florida. The Commission has been cracking down on these broadcasters over the last several months, and this is one of their largest operations yet. Other cities recently targeted by the Commission have been Tampa, New York, Cleveland, and Detroit.

UPCOMING CONTESTS AND EVENTS
For the latest contest news and information, check out the ARRL Contest Calendar, at http://www.arrl.org/contests/.

Also, for the latest hamfest and event information, visit the ARRL Hamfest Calendar, at http://www.arrl.org/hamfests.html.

Coming up this weekened, the Croatian CW Contest, sponsored by Hrvatski Radioamaterski Savez, will run from 1400-UTC December 19, through 1400-UTC on December 20. Operate CW mode only!

Coming up Christmas weekend ... the Radio Amateurs of Canada Winter Contest, from 0000-UTC to 2400-UTC on December 27. For more information, visit the RAC's web site at http://www.rac.ca/.

AND ... IN CLOSING
Thank you for reading this issue of the W8MMQ Wire! We hope that you have enjoyed reading this newsletter, and please feel free to pass it along to others.

For more amateur radio news and information, visit the W8MMQ web site at http://qsl.net/w8mmq/. Or, visit the Radio History Society of Central Michigan web site, at http://qsl.net/ars/. The Radio History Society is the parent organization of the Radio Society of Central Michigan.

Information was taken from the following sources, to aid in the publication of this newsletter: Amateur Radio Newsline, the ARRL Letter, and the FCC Daily Digest.

Brian,

You're kidding....right? When are you going to give up the Morse Myths bit?
Are you anti-code, anti-code testing, or both?

Morse is an encoding scheme that is digital in nature. I'll agree it's not
binary since there are both long and short tones and spaces.

Of course, it has to be converted to a form that the user can understand.
No different than any other digital mode.

But then, you're not reading a binary stream--are you?

Brian, do you see Morse as having any states other than on or off
(1 or 0)? (In practice, some guys *are* running pretty soft keying
in their HB xmtrs - almost have a bell-like ring to them.)

I'm off to Lake Tahoe for three weeks. Merry Christ-Mass.

5528. Newslne Endorses CQ Magazine Amateur Radio Restructuring Concept

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-18 00:00:00 UTC
From: newsline@ix.netcom.com

AN INFREQUENT NEWSLINE EDITORIAL

NEWSLINE ENDORSES ROSS/MOSESON/CQ POSITION ON RESTRUCTURING THE

UNITED STATES AMATEUR RADIO SERVICE

The following is an editorial comment. I'm Newsline producer
Bill Pasternak WA6ITF.

Lets talk for a few moments about FCC Docket 98-143 and what
has become known as the restructuring of he United States
Amateur
Radio Service.

While Docket 98-143 was not very well written, it did at least
force the issue open to public discussion. And the long
commentary period offered would hopefully give lots of
individuals -- hams and non hams -- a chance to file comments
that would lead to a revitalized structure for the United
States
Amateur Radio service.

There were a number of good filings that looked at the big
picture of where ham radio must head in the next century.

Unfortunately there were also far to many that made the process

into nothing more than an extension of the cyberspace battle.
You know: The war of the proponents of maintaining Morse
testing -- or
strengthening it -- vs. those who felt it should be abandoned.

None of these people can see past the end of their noses that
Morse testing is really a non issue. In our view, far to much
time has been wasted on code vs. no-code when the real issue is

that of the very survival of ham radio an entity unto itself.

As a news organization, we had decided early on that it was not

our place to file comments. Rather we have tried to bring to
each of you some insight into what is taking place as this
story
of ham radio recreation unfolds. In the process we have read
the
words of many commentaries -- including those of the American
Radio Relay League -- and were not really impressed by anything

we saw. Most everyone missed the mark because they commented on
the past and the present but had not the vision to see into the

future. This is not to say they offered nothing; rather in our

estimation they all seemed to miss the mark in some areas.

Then we received word that two well respected radio amateurs had
prepared and filed a set of commentary that held this kind of
vision. What we at Newsline call: "The vision of the 21st
century."

The two hams are Richard Ross K2MGA and Rich Moseson W2VU. Ross
is the publisher of the various magazines under the CQ banner.

Moseson is a former CBS Network News producer who now serves as

editor of CQ VHF Magazine.

What these two visionaries did was to call on the FCC to take
Amateur Radio into the 21st century with only three license
classes, a single 5 word-per-minute Morse code exam for access to
worldwide high frequency bands, and experience-based requirements
for upgrading. They also called for the creation of a new type of
operating authority that will make it easy for school age
children and others to experience the marvels of the Amateur
Radio hobby.

While actually nothing more than their comments, the document
prepared by Ross and Moseson soon became known as the CQ Magazine
restructuring proposal and it contains four major elements.

First is an expected reduction in the number of license classes

from six to three. These are equivalent to the current
Technician, General and Extra Class, The big difference is in
the Morse requirement for the two upper grades. While the
Technician would be code free, CQ suggests either a single 5
word-per-minute code exam for both General and Extra, or 5 words-
per-minute for General and 10 words-per-minute for Extra.

Next, the CQ proposal calls for the addition of what Ross and
Moseson call "experience requirements" as a condition of
upgrading. What this means is very simple. Any currently held

license would be renewable forever without showing any
experience

requirements. But to qualify for an upgrade and greater operating privileges, an applicant would have to prove that he or she knows more than how to memorize answers to the multiple-choice questions listed in a license manual. What this does is

to enlist the assistance of longtime hams in schooling the newcomers in proper operating techniques -- in on the air etiquette -- and everything else that makes Amateur Radio so special.

In other words -- instead of "dumbing down" Amateur Radio, the CQ proposal calls on those now here to help to new hams to "smarten-up." It becomes our responsibility to help them to learn, upgrade and carry on the long traditions of ham radio.

CQ also calls on the FCC to extend to all former amateurs the agency's own apparent proposal to grant permanent element credit to holders of certain expired Technician Class licenses. This would allow anyone with an expired amateur license to reactivate that license without having to retake any exams.

But it is proposal calling for the creation of what it calls a

"Basic Amateur Permit," that is the most far sighted and the most signifigant.

The Basic Amateur Permit would authorize operation of an amateur station in a school or health care facility under the general supervision of a licensed amateur. The station would be licensed as a club station under existing rules, with the licensed ham as station trustee, who would be responsible for the station's proper technical operation. The big difference would be that he or she not have to be physically present whenever the station is on the air.

To get a Basic Amateur Permit, an applicant would have to pass an exam on rules and operating procedures. He or she would not be

issued a call sign but would be responsible for the content of transmissions. According to CQ Publisher Richard Ross, K2MGA, the Basic Amateur Permit solves the problem of school-based

radio
groups that thrive as long as there is a teacher on staff with
a
ham license, but that fall apart as soon as that teacher
leaves.
He says that the Basic Amateur Permit would allow many
teachers,
as well as health care workers, even with little or no
technical
knowledge, to operate a specific amateur station as long as it
was functioning properly.

Ross and Moseson note that under this proposal no currently
licensed amateur would lose any operating privileges.

Lets stress this once again because it is so important. Under
the proposal by Dick Ross and Rich Moseson of CQ Magazine, no
currently licensed United States radio amateur would loose any
of
his or her current operating privileges.

Rather, Dick Ross says that this proposal will help amateur
radio
to grow and to prosper. This, by simplifying the current
license
structure, by making upgrading requirements more flexible and
more relevant to actual experience, and by encouraging former
amateurs to reactivate expired licenses and return to the air.

But most important is its proposed Basic Amateur Permit that
will
assure many new young hams will be coming into ham radio as we
reach the millennium and travel far beyond.

And it is because of the concepts of 'experience requirements'
that will give real meaning to upgrading to a higher class of
license -- and their concept of the 'Basic Amateur Permit' that

holds the potential of brining in thousands of new, young hams
--
that we at Newsline have decided to lend our support to the "CQ

Magazine concept of restructuring. And we ask you to do the
same.

The full text of the Ross - Moseson - CQ's comments may be
viewed
on the World Wide. The internet address is at
http://members.aol.com/cqmagazine/98-143.htm

What we ask is that you go to this web site where the CQ
proposal rests; that you read it for yourself and, if you feel
as

we do, that you file what are called 'reply comments on Docket 98-143 that stand in favor of the comments of Dick Ross and Rich
Moseson.

We know that there is no perfect solution to what ails Amateur Radio. The world-wide-web with is license free pseudo ham radio
is a formidable adversary for the little free time available to

youngsters today. But we also know that without lots of new --

fresh -- young hams to grow up in the traditions of Amateur Radio
that there can be no future for ham radio to survive more than another decade -- if that. With those kid hams and those traditions that we can hand down to them the future could be very, very bright.

This is the reason that we of Newsline -- including David Black

KB4KCH, Ken Butler, W1NNR, Bill Burnett KT4SB, Roy Neal K6DUE, Robert Sudock WB6FDF, Don Wilbanks KC5MFA myself and others -- do
endorse the position of Richard Ross K2MGA and Rich Moseson W2VU
of CQ. We pray that you will do the same and that you will file
your reply comments before the January 1999 curtoff date and do

so in support of the Ross/Moseson/CQ concept.

The preceding has been a Newsline editorial commentary. In Los

Angeles, I'm Bill Pasternak, WA6ITF.

-- End of Transmission--

5529. Re: K6FU F.C.C. Warning Letter

> a hurry!!!
>
> Sarcastically, B.E.

Dear Sarcastic,

It seems to me that a little official attention concerning the state of certain frequencies in the 20, 40 and 75 meter bands are well overdue. A small group of miscreants has given Amateur Radio a black eye, and it's high time that these bullys learn "to play well with others" (remedial Kindergarten, I guess). A Certified Letter is part of a process which can lead to major sanctions. I'm glad to see that the process has reached this stage in the proceedings. Remember, en ea murder conviction begins with a non-threatening informal inquiry by the police...

I'm glad to see some effort being made to rid our hobby of sociopaths. Can you think of any other entertainment passtime where such behavior would be tolerated for a minute? Since the substance of our hobby is radio communication, and the jammer/bullies make serious efforts to interfere with this, I'll use another example:

Can you imagine what would happen to a football spectator who ran on to the playing field during a game and repeatedly attempted to disrupt the action using obnoxious and obscene methods? I think that the disruptive fan would have to be mailed home to Momma in a small envelope. Think about it -- this isn't that different of a situation. We all need some tough referees (FCC in this case) to throw the bum out. There is no excuse or rational for rude, obnoxous and obscene behavior - either in football or in amatuer radio.

5530. GLB TNC info

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-18 00:00:00 UTC
From: "Curt M. Breneman" <brenec@rpi.edu>
Message-ID: <367AB60D.228@rpi.edu>
Source record: 155378

Folks,

Do any of you have any info on the GLB PK-1B (I think) TNC? It's a
small unit with two DB-25 connectors on it which is supposed to support
VHF/UHF packet operations. So far, it doesn't seem to respond correctly
for me, since it doesn't appear to use the TNC-2 TAPR command set.

Thanks,

Curt Breneman
KC2EBP

LIVE SSTV TRANSMITTED FROM MIR

For the first time, live SSTV images have been transmitted from the Russian Mir space station. SSTV equipment was transported to the spacecraft earlier this fall and put on the air December 11. Several amateurs reported copying the images from space on 2 meters, but plans call for the SSTV transmissions to move to a 70-cm frequency that's coordinated for that purpose.

The SSTV system was turned off for several passes after December 14, and the Mir packet system was back on 145.985 MHz, but as of December 16, R0MIR was transmitting SSTV on some passes and packet on others. Meanwhile, APRS developer Bob Bruninga, WB4APR, had announced a four-day APRS school experiment via Mir through December 18.

Maxim Memorial Station W1AW copied R0MIR's SSTV pictures December 14 and 16 on 145.985 MHz. "We were able to see one of the solar panels and part of what appeared to be the lower outline of the spacecraft," said W1AW Station Manager Joe Carcia, NJ1Q. He added that Mir's signal was "pretty strong, a good 58 or 59 for most of the pass." Before the SSTV transmission commenced, the station sent "R0MIR" in CW.

Neither of the cosmonauts aboard Mir during the current tour of duty is a licensed amateur. The SSTV equipment aboard the spacecraft was supplied to the Russians by Miles Mann, WF1F. He says the system operates in automatic mode and can display a new image every two minutes.

Mann coordinated a 70-cm frequency, 437.975 MHz, for the SSTV project with AMSAT Frequency Coordinator Graham Ratcliff, VK5AGR. The 2-meter 145.985 MHz frequency has been coordinated for FM voice and packet use, however. While the SSTV system is operating, the Mir packet system and the SAFEX repeater are off the air. Mann said December 16 that he's seeking to keep the SSTV system operating on 2 meters for a while longer, but added that it would likely go to 70 cm on or before January 1.

A former Mir International Amateur Radio Experiment (MIREX) vice president, Mann formed his own Manned Amateur Radio Experiment--North American division (MAREX-NA) organization after a public falling out with MIREX President and Mir packet sysop Dave Larsen, N6CO. Larsen, the official Space Amateur Radio EXperiment (SAREX) liaison with the Russian space program, was among those complaining about the appearance of SSTV on Mir's 2-meter downlink frequency.

For details on how to receive SSTV using your PC, see http://www.ultranet.com/~sstv.

FCC ACTS IN ALLEGED EXAM, LICENSE FRAUD CASES

The FCC's Compliance and Information Bureau has acted in several Amateur Radio cases it inherited from the days when it shared enforcement duties with the Wireless Telecommunications Bureau. In all of the cases, the FCC said it appeared that individuals attempted to obtain an Amateur Radio license or upgrade by fraud or misrepresentation.

On December 14, the FCC downgraded two amateur licensees and canceled the ticket of a third in Michigan. Busted from Advanced to Tech Plus were Lawrence A. Repp Jr., N8HFN, of Gaylord, and Alan E. Quirie, KA8ZRR, of

Royal Oak. The FCC pulled the Tech Plus ticket of Steven A. Penn, formerly KC8HUM, of Southfield. The FCC had not updated its database as of December 15.

The Commission said the three filed amateur applications claiming to have taken Amateur Radio examinations at Oak Park June 3, 1997, at an ARRL VEC session. The FCC says its evidence shows that the three did not sit for the exams and that their names "were added and signatures forged, sometime after the tests were administered, by one of the four examiners." That examiner--the father of one of the exam candidates involved--is said to have forwarded the session package on behalf of the VE team to the ARRL VEC for FCC filing.

"Three of the examiners knew nothing of the scheme," the FCC said. The other three VEs brought the situation to the attention of the ARRL VEC and the FCC after learning that names had been added to the list and that their names had been forged on the ARRL VEC Administering VEs Record. The FCC said it would act in the case of the fourth examiner by month's end. The Commission also is looking into possible enforcement action against another ham whose name was added to the list after the test session but whose application was not actually submitted to the FCC.

The FCC also dismissed two amateur applications in Puerto Rico after the applicants failed to answer questions put to them by the Commission. In the case of Jose R. Velez-Rivera, of Rio Pedras, an FCC official said it appears that an imposter tried to change another amateur's call sign, address, and date of birth to his own to get a license without taking an exam. In the second case, the FCC dismissed the renewal and General class upgrade application of Hector A. Santiago, WP4DCB, of Camuy. An FCC official said it appears Santiago tried to renew as a General when he only had a Novice ticket.

Velez-Rivera and Santiago were notified by the FCC October 23. The FCC updated its database this month to reflect the dismissals.

SPUTNIK 41/RS-18 QRT

The second mini-Sputnik satellite, Sputnik 41, went silent on or about December 11, according to reports. The little satellite, also known as RS-18, was launched by hand from the Russian Mir space station during a November 10 space walk by cosmonauts Gennady Padalka and Sergei Avdeyev.

Sputnik 41 was powered by nonrechargeable batteries and designed to operate for up to a month. Its predecessor, Sputnik 40--launched in November 1997 to commemorate the launch of the original Sputnik satellite in 1957--continued to transmit for 55 days. The later Sputnik 41/RS-18 transmitted recorded voice beacons in English, Russian, and French as well as a beacon tone that indicated the satellite's interior temperature.

Sputnik 41 was financed by the Aeroclub de France to mark its centennial as part of a program of satellites made in a collaboration of Russian and French students. AMSAT-France cooperated with the education department of the Russian Aeronautic Federation in this most recent Sputnik reprise.

Reception reports go to AMSAT-France, Sputnik 41/RS-18 QSL Manager, 14 bis rue des Gourlis, 92 500 Rueil-Malmaison, France. Reports should include a 5x7, self-addressed envelope and two IRCs.

An updated list of reception reports received by the French QSL manager is available at http://ourworld.compuserve.com/homepages/ascerland/sp41QSL.htm. The page lists reception reports from some 40 countries around the world.

For more information, visit the 1998 International Year of Air and Space page, http://www.ccr.jussieu.fr/physio/Satedu/sputnik41.html.

ARRL COMMENTS IN PART 15 PROCEEDINGS

The ARRL has filed comments with the FCC in two proceedings that it says could lead to greater interference to amateurs.

The League expressed "continued strenuous opposition" to an FCC proposal to revise Part 15 of the rules to permit unlicensed, point-to-point transmitters in the 24.05 to 24.25 GHz band at field strengths of up to 2.5 V per meter, measured at 3 meters. Amateur Radio has an allocation at 24.0 to 24.25 GHz.

In September, the FCC released a Notice of Proposed Rule Making in ET Docket 98-156, in response to a petition from Sierra Digital Communications Inc. The company wants to market point-to-point microwave devices. The ARRL already had commented on the Sierra Digital Petition for Rule Making. It called the FCC's proposed rules changes "entirely inappropriate for Part 15 unlicensed facilities."

The League said the Commission considered and denied a petition in 1983 to permit unlicensed, uncoordinated, point-to-point microwave operation in the 24-GHz band. The recent petition amounts to "the exact same proposal," the League said.

The League also commented in response to a Notice of Inquiry, in ET Docket 98-153, about whether the FCC should revise Part 15 to allow ultra-wideband (UWB) transmission systems. Such systems, operating in the VHF and UHF spectrum, include applications like radar, voice, data, and control communications devices. The League expressed concerns that Amateur Radio and home entertainment devices, including TV sets, could be subjected to interference from the Part 15 UWB devices.

The League proposed that the Commission ask manufacturers of UWB devices to develop and circulate technical standards "in support of a unified, comprehensive plan." The League also offered its services to help determine proper technical regulations.

FAR OFFERS SCHOLARSHIPS

The nonprofit Foundation for Amateur Radio Inc--an ARRL-affiliated federation of more than 75 Amateur Radio clubs in the Washington, DC, area--plans to administer 66 scholarships for the 1999-2000 academic year to help licensed radio amateurs with their post-secondary education. Ten of the scholarships are fully funded with income from grants and the foundation's annual hamfest. FAR administers the remaining 56 scholarships without cost

to the donors.

Licensed amateurs are eligible to compete for these awards if they plan to pursue a full-time course of study beyond high school and are enrolled in or have been accepted at an accredited university, college, or technical school. Awards range from $500 to $2500. In some cases, preference goes to those pursuing certain courses of study or to residents of specific geographical areas. FAR encourages all clubs, especially those in Delaware, Florida, Maryland, New Jersey, Ohio, Pennsylvania, Texas, Virginia, and Wisconsin, to spread the word on the availability of these scholarships.

Application forms and additional information are available by letter or QSL postmarked prior to April 30, 1999, from FAR Scholarships, PO Box 831, Riverdale, MD 20738. Contributions to FAR are tax-deductible.

FIFTEEN DAYS OF VIRTUAL FAME!

Imagine your feature article on the pages of our new Web publication, The ARRLWeb Extra! We invite your Amateur Radio-related non-technical, semi-technical, entertaining, informative, innovative, and even off-the-wall articles for consideration. Good-quality photographs and sound files to complement your article are encouraged.

Developing an idea or (better yet) a series of ideas you'd like to share with your fellow ARRL members? Maybe we can sign you on as a regular AWE contributor. Are you an unsung (and unparalleled) columnist for your local club newsletter seeking a wider audience? Let's talk! Have a useful ham radio tip you'd like to pass along? Send it! We compensate authors for material we use. You won't get rich, but you will get your name up in lights (in a manner of speaking, that is) for a couple of weeks.

We're also always looking for captivating and imaginative Amateur Radio-related photos, hard copy or electronic. Get in touch with Rick Lindquist, N1RL, Senior News Editor, ARRL HQ, e-mail n1rl@arrl.org or tel 860-594-0222.

SOLAR UPDATE

Solar seer Tad Cook, K7VVV Seattle, Washington, reports: Solar activity was mixed this week, with sunspot numbers up an average of about 10 and solar flux down about 9 points compared to last week. The average solar flux for the previous 90 days rose from 131 to 132, and solar flux was above this level on every day, a good indicator of a general upward trend. The active geomagnetic day was December 11, when the Planetary A index rose to 30 and the College, or high latitude A index was 52. This indicated a geomagnetic storm.

Conditions were good for the ARRL 10-Meter Contest, even with the rough conditions at the start. Solar flux was higher than forecast, with the December 11-13 numbers at 143.1, 143.3 and 144.2, rather than the predicted 132, 128 and 122.

This bulletin is written on December 17, and geomagnetic conditions have been exceptionally quiet, with an A index of zero. The Boulder K index was also zero throughout the day, and the College and Planetary K index only showed marginal activity around 1500 and 1800 UTC. Over the next three days, December 18-20, the predicted Planetary A index is nine, and the solar flux should be around 145, 140 and 135. Beyond the weekend expect the solar flux to rise back to 150 around December 28 and 29, then drift below 145 again on the last day of the year, rising slightly again the second week in January. Look for slightly unsettled conditions around December 28 and 29.

There were some interesting conditions on VHF this past week. On December 11, while the geomagnetic storm was disrupting propagation on HF, ZL3SIX in Christchurch was hearing many North American stations on 6 meters, including N5JHV and two Mexican beacon stations. Also, VK3AMK worked TI5KD and SM0KAK/XE1 worked VK7GK on 50 MHz. On 2 meters, WA6TBO heard the KH6HME beacon, and WP4O reported working Uruguay from Puerto Rico.

Sunspot numbers for December 10 through 16 were 145, 166, 142, 152, 113, 108, and 118 with a mean of 134.9. The 10.7-cm flux was 133.8, 143.1, 143.3, 144.2, 144.4, 141.6, and 140.5, with a mean of 141.6. The estimated planetary A indices were 6, 30, 6, 3, 4, 5, and 11, with a mean of 9.3.

LUKE H. MONTGOMERY JR, WA4UDB, SK

Luke H. "Jack" Montgomery Jr, WA4UDB (ex-W4ADF), of Nashville, Tennessee, died October 12. He was 91. Montgomery and Jack DeWitt founded WSM radio in 1922, and Montgomery engineered the first broadcast of the Grand Ole Opry in 1925. He served as chief engineer at WSM radio and later at WSM television. He build the first commercial FM station in the US in 1938. Montgomery became the son-in-law of George Bailey, W2KH, who served as ARRL president from 1940 until 1952. Beyond radio engineering, Montgomery served as a research associate and later as an assistant professor of anatomy at the Vanderbilt University School of Medicine. He was an early pioneer of the pacemaker (among other developments) and was named a Fellow of the Institute of Radio Engineers for his contribution to medical electronics. Survivors include his stepson, Dick Crouch, N6RC.--Dick Crouch, N6RC

RICHARD A. BERNSTEIN, KA2YZM, SK

Rich Bernstein, KA2YZM, of Tamarac, Florida, died December 11. He was 51. An ARRL member, Bernstein was the net manager of the Florida Midday Traffic Net and the Broward County Emergency Preparedness Net. Southern Florida Assistant SEC Jim Goldsberry, KD4GR, reports that Bernstein suffered from Crohn's disease. "He was admired by all who knew him for his persistence in continuing to serve as net manager for FMSN and BCEPN, plus being active in ARES/RACES despite his medical problems," he said. Goldsberry said some 20 hams attended services for Bernstein December 14.--Jim Goldsberry, KD4GR

HOMER J. "JOE" JOHNSON, W5QFU, SK

Arkansas Section Traffic Manager Joe Johnson, W5QFU, died December 12. He was 81. Johnson lived in Malvern, Arkansas, and had been an ARRL member for 31 years.--Roger Gray, N5QS

IN BRIEF:

* This weekend on the radio: The Croatian CW Contest is December 19-20. Just ahead: The Stew Perry Topband Distance Challenge and the RAC Winter Contest are December 26-27. See December QST, page 95, for details.

* New OK SM: Charlie Calhoun, K5TTT, has been appointed Oklahoma Section Manager. He replaces Coy Day, N5OK, who takes office as West Gulf Division Vice Director January 1, 1999. Calhoun's term as SM ends September 30, 2000.

* Vanity update: The FCC in Gettysburg reports it has processed vanity applications received through November 27. The latest run yielded 184 grants. Another 174 applications landed in the work-in-process or WIPs stack.

* SM training session: ARRL HQ hosted five new section managers on December 5 for a daylong Section Managers' Workshop, conducted by Field Services Manager Rick Palm, K1CE. Attending were Raul Escobar, KP4ZZ, Puerto Rico; George Tranos, N2GA, New York-Long Island; Bob DeVarney, WE1U, Vermont; Kevin Bunin, K4PG, Southern Florida; and Les Shattuck, K4NK, South Carolina. Palm says the workshop included the SM's program responsibilities, issues and discussion, plus ARRL organizational mission and structure; basic management theory; and volunteer motivation techniques.

* Satellites get OSCAR assignments: Amateur Radio's two newest satellites, SEDSAT-1 and PANSAT, have been assigned OSCAR numbers by AMSAT. SEDSAT-1 now is SEDSAT OSCAR-33 or SO-33, while PANSAT is PANSAT OSCAR-34 or PO-34. Both were launched earlier this fall. AMSAT President Keith Baker, KB1SF, congratulated members of the SEDSAT and PANSAT teams on their success in placing their respective satellites into orbit. The assignment of consecutive OSCAR numbers to new ham radio satellites dates from the launch of OSCAR-1. To qualify for an OSCAR number, the satellite must successfully achieve orbit and one or more transmitters must be successfully activated in the Amateur Radio bands.--AMSAT News Service

* DARA scholarships: The Dayton Amateur Radio Association is accepting applications for its annual scholarship awards. The DARA Scholarship Program is open initially to any Amateur Radio operator graduating from high school in 1999. There are no restrictions on course of study, nor does the student need to be pursuing a four-year baccalaureate degree, but schools selected must be accredited. Awards are made on a nondiscriminatory basis. Selection criteria include financial need, scholastic achievement, contributions to Amateur Radio, and community involvement. Decisions of the DARA Scholarship Committee are final. Maximum individual awards are $2000. For an application and full details, send an SASE to DARA Scholarships, 45 Cinnamon Ct, Springboro, OH 45066. Application deadline is June 15, 1999.--Stan Kuck, NY8F

* Antarctica call signs clarified: The call sign blocks for US operations in Antarctica are KC4AAA-AAF and KC4USA-USZ. These call signs are not issued nor administered by the FCC but by either the National Science Foundation (AAA-AAF) or the US military (USA-USZ). As a result, Antarctica call signs do not appear in the FCC database. More information is available at

http://www.qrz.com/.--thanks to John Hennessee, N1KB, ARRL Regulatory Information Branch

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom

listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

> Morse is an encoding scheme that is digital in nature. I'll agree it's not
> binary since there are both long and short tones and spaces.

Actually, a little shift of perspective will show it to be binary. Binary EPROMs are used for CW iders. For instance, my call would look like: 10111011100011101010101000101111010001110101110100010111 I'm working on a DSP decoder that generates a binary bit stream as an intermediate step in the decoding process.

> But then, you're not reading a binary stream--are you?

Turn on an audio oscillator when the bit is a 'one' and turn it off when the bit is a "zero" and we have perfect Morse code. Morse code easily falls under the definition of a digital mode. That the bit width is usually formed by imperfect human estimates does not change the digital nature of perfect Morse code.

SB QST @ ARL $ARLB105
ARLB105 FCC acts in alleged exam, license fraud cases

ZCZC AG06
QST de W1AW
ARRL Bulletin 105 ARLB105
From ARRL Headquarters
Newington CT December 18, 1998
To all radio amateurs

SB QST ARL ARLB105
ARLB105 FCC acts in alleged exam, license fraud cases

The FCC has acted in several Amateur Radio cases where it appears that individuals attempted to obtain an Amateur Radio license or upgrade by fraud or misrepresentation.

On December 14, the FCC downgraded two amateur licensees and canceled the ticket of a third in Michigan. Busted from Advanced to Tech Plus were Lawrence A. Repp Jr., N8HFN, and Alan E. Quirie, KA8ZRR. The FCC pulled the Tech Plus ticket of Steven A. Penn, formerly KC8HUM. The FCC had not updated its database as of December 17.

The Commission said the three filed amateur applications claiming to have taken Amateur examinations at Oak Park, Michigan, on June 3, 1997, at an ARRL VEC session. The FCC says its evidence shows that the three did not sit for the exams. It says their names ''were added and signatures forged, sometime after the tests were administered, by one of the four examiners.'' That examiner--the father of one of the exam candidates involved--reportedly forwarded the session package on behalf of the VE team to the ARRL VEC for FCC filing.

The FCC said that three of the examiners knew nothing of the scheme. The other three VEs brought the situation to the attention of the ARRL VEC and the FCC. The FCC said it would act in the case of the fourth examiner by month's end. The Commission also is looking into possible enforcement action against another ham whose name was added to the list after the test session but whose application never was submitted to the FCC.

The FCC also dismissed two amateur applications in Puerto Rico after the applicants failed to reply to FCC inquiries. In the case of Jose R. Velez-Rivera, an FCC official said it appears that an imposter tried to change another amateur's call sign, address, and date of

birth to his own to get a license without taking an exam. In the second case, the FCC dismissed the renewal and General class upgrade application of Hector A. Santiago, WP4DCB. An FCC official said it appears Santiago tried to renew as a General when he only had a Novice ticket.

Velez-Rivera and Santiago were notified by the FCC October 23. The FCC updated its database this month to reflect the dismissals.

It all depends on how quick the VE team gets the info to the FCC and how
they do it,express mail,e-mail,etc.I see most of them from our team
posted in 10-14 days,they also have a # you can call.CONGRATULATIONS

5542. Re: ADI AT-600HP

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-18 00:00:00 UTC
From: KD5FJE@webtv.net
Message-ID: <21977-367B3624-36@newsd-133.iap.bryant.webtv.net>
Source record: 155390

I have the ADI 600TH on order strictly based on its features (such as alpha display) blowing away the competition on price for features, ease of programming and large displays. This is how I've bought all of my radios and have not been disappointed yet. My single bander HT is an Alinco DJ191TH, my mobile singles are TWO IC2100H's and my dual mobile is the Kenwood G707A. You must shop by features!! Not by brand. One brand may have a great HT but lousy mobiles and...well, you get the idea...thus the "brand" variety in my arsenal. Most all of the radios are good and only a meter can tell the difference in most of the specs, not your ears..so go by features. I personally can't get by w/out the alpha numeric displays...once you use 'em, you'll never realize how you got along w/out 'em...The ADI is supposed to be an excellent unit....I'll advise when it comes in..it's on back order from AES....73....

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you.

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. See Hillary do something naked.
3. A blond naked chic being held by a female ham!.
4. Take the Burt Poll, about Clinton ham spouses, girlfriends
5. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
6. Burt's opinion on the First Affair in the White House with a picture of the
new first couple.
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. A test for your SVGA monitor
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Iffen you weren't listening to 3.950 on Wednesday evening, you missed
a truly magnificent performance by our good pal Uncle Waltie. Starting at
around 7:30 Central Uncle W. started making various non-sequitor comments
to people who were not even present on the frequency and to his B&W TV
set which was on CNN covering our President's latest wag-the-dog escapades.
Slowly but surely as time marched on, Mr. Barstool's already slurring speech
grew even more incognisant and esoteric, as sucessive shots-and-beers found
their way home into YEE's already well juiced head. (This was going to be a night
to remember fer sure!) Crustier and crustier epithet's flew more and more - as
various net participants, CNN Reporters and pink Republican elephants began
walking sideways along the ham shack! Then, the trademark show begins as
those great old German Marching toons begin to fly out of the speaker in "simply
mavelous" Three Kilowatt RF High Fidelity. It was quite a time of reflection and
casual contemplation, seated in front of my R-5000, turning down the volume
on my TV while watching the skies of Bhagdad light up like a freakin christmas
tree on the surreal green night-vision of CNN Live - whilst listening to Barstool's
Nazi Marches on the Radio for background music!! BRAVO! BRAVO! BEVISIMO!!
Walter Barstool's "Bomb Saddam" Show went on for a couple of hours, and I must
say I enjoyed the surrealism of the moment completely. Merry Xmas Uncle Walter!
May Santa bring you another Seinhauser Microphone and 2 velvet sacks of Crown
Royal with matching commemorative shot glasses :)

Hi all,

This is what I found out about the Amateur Radio tag for North Carolina. There is a $10 fee that is paid at the time of application and $10 yearly. It can be done by filling out an application or by going into DMV with your callsign and they will do it electronically for you. Thanks again for all of your help.

5554. Re: How To Make A Jammer

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-18 00:00:00 UTC
From: kk4tl@aol.com
Message-ID: <19981217231158.04521.00001073@ng-ca1.aol.com>
Source record: 155439

Phil .. you must be crazy. White noise jamming? That ain't jamming. Name calling and taking over in-use frequencies for nets and taking over frequencies being used by nets and stuff is jamming.

Now I don't know the players on 14.3whatever. But I have been listening on 3950, "the most exciting frequency in Amateur Radio". I tell you, Phil, if the netters and jammers didn't have each other to pick at, 3950 would be the dullest frequency in amateur radio.

Phil, imagine Arkansas Bob using white noise instead of telling us who is going to jail this week. Imagine W9ART using white noise instead of campaigning for W1WCR for president.

Imagine Walter playing white noise instead of German march music. Imagine Walter playing white noise instead of throwing his drunken tantrums.

Imagine Sid playing white noise instead of "Anchors Aweigh". Imagine the sound of
"fffffffffffffffffffffffffffffffffffffffffffffffffffffffffffffffffffffffff
ffffffff" instead of "you Nazi faggots move over .. I am the loudest station in the nation".

Imagine sending tapes of white noise to the FCC. No, Phil. White noise ain't no way to jam. We gotta have that creative, imaginative, personal touch.

5555. Supermorse 415 Using RS-232 port to key

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-18 00:00:00 UTC
From: Neil Matthes <matthes@singnet.com.sg>
Message-ID: <75cma9$5cf$1@newton3.pacific.net.sg>
Source record: 155440

I am using SM415 as a learning aid and am having trouble as follows:

I am attempting to connect to an external keyer via RS-232 (tried mainly COM1 but also COM2). I am able to toggle the CTS line (computer can decode this) but it is reversed (key down, no beep; key up beep). The polarity sense + - has no effect nor does the selection of CTS or DSR for that mattter. I have tried numerous combinations of port selections and computers all with the same result.

WHAT AM I DOING WRONG? Can anyone help ?

matthes@singnet.com.sg

5556. Re: KAM Tnc - need manual

Actually you need to specify the software version you have
in your KAM. I have 2.35 and 5.0 manuals.

I'm trying to find someone who might have 6.0x version software
for a KAM, as I believe this was the last version (was it?) before
the duaghter board was required.

5558. Re: ADI AT-600HP

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-18 00:00:00 UTC
From: Brian Esche <esche@worldnet.att.net>
Message-ID: <75coch$38p@bgtnsc02.worldnet.att.net>
Source record: 155443

I recently purchased the AT-600 after owning an Icom W31A for two years. I am extremely pleased with the ADI unit. I generally don't shop for features in an HT but primarily look for performance (read 'intermod rejection). Of the several leading HTs on the market that I have tested at my local HR store, the AT-600 had BY FAR the least problem with image rejection. Essentially I purchased the unit on that basis alone. The numerous features were a bonus and I am quite pleased with the flexibility in programming it offers.

My only complaint - the receive audio leaves something to be desired. This complaint is certainly not limited to the AT-600, however. None of the latest generation of HTs has decent receive audio due to the tiny speakers that they contain. For some reason the manufacturers have decided that 'smaller is better' and continue to downsize HTs for no good reason. I personally would like to see an HT like the AT-600 in a package the size of an Icom O2AT (from a few years ago) so it could have the audio punch of a commercial HT. But I digress...

The bottom line: If you buy an AT-600 I am confident that you'll be pleased with your decision.

It is if it is sent correctly. Digital codes must have a discrete and finite set of symbols. Morse satisfies that condition. It has 5 discrete symbols. That they are defined by discrete durations as well as discrete amplitudes when sent as CW is irrelevant. That's merely an implementation issue. Digital does not imply binary. Any integer number will do to dimension the signal space. There are good reasons why binary digital codes are to be preferred for noisy channels, but they don't have exclusive claim to being called digital coding.

Because OOK is limited to two amplitude states, in order to represent 5 symbols, both the y and t axes of the signal space are employed to provide the necessary dimensions. But that's just a modulation system limitation, and isn't a necessary condition of the coding.

Morse *could* be conveyed by sequentially holding up the appropriate finger of the hand for each of the 5 symbols (dot, dash, intracharacter space, intercharacter space, and word space). Those *digits* would fully convey the code without any extraneous symbol timing considerations. Or alternately, five discrete tones could be used over a radio channel to convey the five Morse symbols, five discrete voltage levels could be used on a wire, etc.

OOK Morse is bad signal design because it prohibits match filtering for best weak signal detection, but that's a different issue. For best weak signal detection, a signal design needs to have uniform symbol durations, and every symbol needs to be separately and distinctly voiced. OOK Morse fails on both counts, but Morse, the code, could be sent in such a way so as to meet those requirements using a different modulation technique having five uniform discrete symbols in a constellation not requiring that some components fall differentially along the t axis.

It wouldn't be an optimum design, but it would work better than OOK Morse. It'd work even better if we altered the Morse code, eliminating the intracharacter space symbol, which would become superfluous in a fully voiced modulation, and then we could represent it with a discrete quadrature modulation. That's an efficient modulation, and it's easy to implement as well. We'd still be stuck with the limitations of the Morse character set, of course.

It is if I am to understand it. You and I are using English. Tom responded to me in English. If a Russian were to reply, I would need you to decipher for me. I speak and read English - nothing else at this time.

Sayonara,
Brian/N0iMD

This had NOTHING to do about sex. It had everything to do with
a man who would sooner lie then tell the truth, when the truth would
serve him better. The man is a sociopath! Notice how many people
surrounding him seem to wind up dead?

Cheers.

John,

I've tried this before, and found out that you have to be careful with amplifying digital proportional RC. The first question is related to your mode of operation: Is it Pulse, AM or FM modulated in your particular case? Newer RC gear has all of these modes as possible modulation schemes. I do know that pulse-modulated RC produces spikes and can kill solid-state amplifiers. Good luck in your particular application.

I can agree that Clinton's sex life is none of the government's business, but, when he feels the urge to bust a nut on my time it makes it our business. He shot his load while "On the job", you try that on your job and tell me how long your employer will keep you on the payroll. Keep in mind that in his position he is "On the job" 24/7/365 and with that comes certain perks and restrictions. He is in a position that requires him to uphold higher standards than most people. I don't care that Monica got to pet the Arkansas White Snake, she should have done it at the petting zoo and not in the White House.

I just hope the lying bastard gets what coming to him, he embarrassed the American people in the eye's of the world and had a set of balls the size of a grapefruit to stand up and look the American people in the eye and lye to us.

It was said that he should do the honorable thing and resign. What would a cheating, stealing, lying bastard know about honor?

The 530S is an older radio and only takes 120V AC. Ive gotten some email saying that its fine to use a modified sine wave inverter.Wish I could run directly off batteries but this radio was priced right so Ill work around the problem as they say. I already have a 500 watt whistler inverter so it looks like Im ready for the power to go off.

Thanks Paul K. N9EMX

Congratulations. But unfortunately you are now on Cecil's "All Extra's are bad list". You will need to immediately contact the FCC and request a downgrade in license. That way he will think better of you. He's waiting for the FCC to eliminate the code test so that the FCC will *give* him an Extra Class license so that he can ask to be downgraded also. That man does have principles...

:Morse is an encoding scheme that is digital in nature. I'll agree it's not
:binary since there are both long and short tones and spaces.

Of course it's digital! Absolutely unequivocally digital! It's OOK Morse
on-off keying, that is binary the difference between dit and dah is in the
time domain which a serial encoding scheme.

:Of course, it has to be converted to a form that the user can understand.
:No different than any other digital mode.

That's right you just need a look-up table and you've got it.

:But then, you're not reading a binary stream--are you?

Of course you are reading a binary steam.

I'll bet it is possible to find two Russian hams who use CW daily and
who aren't using English.

It is strange you call me that name when YOU authored below:
Did you get involved with gay ham radio? (not that I think that is bad).

Mark you sound so wonderful I think I'll turn gay just to get a "crack" at
you.

Just kidding. :)

Do you have a license Don?
What do you like about DX?
How can your "sole interest" be three things?

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. See Hillary do something naked.
3. A blond naked chic being held by a female ham!.
4. Take the Burt Poll, about Clinton ham spouses, girlfriends
5. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
6. Burt's opinion on the First Affair in the White House with a picture of the
new first couple.
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. A test for your SVGA monitor
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

I tested for upgrade to Extra last Saturday, and my new call sign made
it into the FCC output this morning at 3:20am. It has not yet made it
to the University of Alabama site (http://www.ualr.edu/~hamradio) or
to qrz.com.

So it took 7 days for me.

You are dealing with hams. They are gutless (as you are).
I have called locals Nazis and they damn well know where I live.
They say nothing. If I knocked on your dood you would pee in your pants.
Finding out who you are is easy, look at the headers.

A pileup is when a DX station calls CQ and wants to see how many hams
will kiss his ass because he is rare. He CHARGES them $2 for a QSL card and
uses the profit to fund his ham station to make more money.

Please visit my World Wide Web Site, you have never seen a page like it.

5609. Broadcast XMTR Conversion Page - WA2WHV

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-19 00:00:00 UTC
From: Jim Hawkins <jimh@exit109.com>
Message-ID: <367B94D7.36794AA7@exit109.com>
Source record: 155322

If your thinking about acquiring and modifying an old broadcast
transmitter for amateur use,
I have put up a page which documents my work on the RCA BTA-500R for 160
meters.

The main page links to three sections:
1) About the station it came from
2) Moving the transmitter
3) Work done to modify the transmitter

The URL is:

http://www.exit109.com/~jimh/bta-500r.shtml

It is in full operation and I generally am on the 1885, 1845 and 1985 AM
"windows".

73,
Jim Hawkins - WA2WHV

Burp,

You are not a ham either - you are an asshole with an amateur license.

Kevin, N1UYW

Mike, you might try giving Norm's Rotor Service in Maryland a call. Maybe he's got a spare parts box with a meter that he could sell to you. Take a look at:

http://www.tiac.net/users/shiacawn/rotors/index.htm

It's worth the free look!

I know. and about a half of amateurs in US are technicians. no
wonder why number of active amateurs are decreasing. I am happy that
most people now realize how to make a life without calling CQs and
punching CW keyers.

I think CB is geneally a good way (and cheap!) way to get into the radio hobby. I was a CBer for about 4 months before I got my ham license, and there are good and bad people on both sides. On the local repeater here there is this one dude which seems to get pissed every time I go on the repeater. Solution? I don't use that repeater anymore. I'm 15 and I find most of the people of the ham bands are like 30+, but on the other hand on CB there are people that are more my age (and I don't mean that mentally...) So there are good and bad on both sides. And besides, someone can buy a brand new Cobra CB for $19 nowadays, so there you go.

Doesn't your radio have a 12VDC input? Dunno about the 530s, but the
570s certainly runs off 12V... Remove all the middlemen and run
directly off your batteries...

You don't actually believe that the new no-code Techs caused the number
of active amateurs to decrease, do you?

Before no-code licenses were made available, the number of active and
newly licensed hams was dramatically decreasing... which is why the
no-code tech license was made available. If anything, it's helped to
revive interest in amateur radio. I began as a Novice so that meant I
had to learn the code but not many are that motivated since the advent
of the PC. It's far easier (and less expensive) to talk to someone
around the world via a computer chat-room, email, or IRC than it is via
an antenna.

So again... if anything, it's the no-code tech that is helping amateur
radio to attract new hams as well as it is. The no-code techs are not
much like the traditional ham in that they don't get into the equipment
and it's theory as much, but that's just how it is... unfortunately for
them.

WASHINGTON (AP) -- In a surprise move, the White House announced tonight that K5ZU has been promoted from Frequency Captain to Commander in Chief of 3950. As Commander in Chief of 3950, Arkansas Bob will be in charge of all nets, jamming and discussion topics.

In a prepared satement, President Clinton told reporters, "Uncle Bob - - er - - I mean - - Mr. Serrette has been an invaluable asset to us, assisting us in our various cover-ups and spin-doctoring on the amateur radio front. Single-handedly, he has thwarted the efforts of "the Great Liberty Net" to expose all the dirt that has taken place under the most ethical administration in history".

When asked why he had mounted his campaign against "the Great Liberty Net", Mr. Serrette told reporters, "They're child molesters, they're baby killers, they don't have a job, they live with their mama, they killed my dawgs, they're going to jail. In Arkansas. Pressed for specifics relating to the assertions about the netters, Mr. Serrette appeared to be somewhat disoriented and said of the press corps, "Yyyoouuu peeeople make meeeeee siiiiiick".

In his position as Commander in Chief of 3950, Mr. Serrette will have access to all presidential assets, including transportation on Air Farce One and health care at Bethesda Naval Hospital.

A swearing-in ceremony will be held next week in the White House Rose Garden, after which Mr. Serrette will be given a guided tour of the pharmacy at Bethesda. If they can ever get him out of the pharmacy - - I mean once the tour is completed, K5ZU will return to Arkansas on Air Farce One.

Commemorative QSL cards will be issued to all hams and Shorwave Listeners who work K5ZU / aeronautical mobile from Air Farce One during either leg of this trip. The White House Travel Office will serve as QSL bureau. (Unless Queen Hillary fires everybody again.)

The modulation method has two states, ON or OFF, but the code is
a timing code with five symbols (dot, dash, intracharacter space,
intercharacter space, and word space). Don't confuse the modulation
method with the information coding. If sent properly, Morse is a
digital code, but it isn't a binary digital code.

Settling time is an issue, but probably not as important as the overshoot and ringing. You'd have to carefully design the loop filter to avoid overshoot while maintaining adequate bandwidth for the desired data rate. Overshoot, by the way, is a fairly significant in most of the PLL rigs I've looked at. They come bouncing onto channel, often with a significant component +/- 30KHz away. ...

By the way, my old Kenwood TR-2600A had a *horrific* overshoot, it was clearly visible +/- 100KHz away.

Yep, and a good reason why one is expected to use type-accepted rigs outside of the ham bands (except during serious emergences). Or, if one uses commercial frequencies routinely, to program a few amateur channels, in addition to one's allocated channels, into one's personal commercial rig. [This applies to Part 97 users, other countries may vary.] At least, that's what to local techs i know do about that problem.

If they were all dits or all dahs, sure. But when you throw in extra
intelligence in how long it is on or off, or the spacing between ons and offs,
or different spacings between characters and words, well, thats -not- digital.

73 and Merry Christmas!

Precisely the scheme I used to build my 2meter repeater IDer in the
1970's using 74xx TTL technology, programmed with a diode matrix board. Worked
great. Simple, too.

Brian, me lad, the ol' memory lagging a bit? I'm the guy who was set upon so severely by all the digi types for asserting that CW has all the characteristics of a language, remember? Know any digital languages -less of course those used by digi dingalings? I've *always* considered CW to be analog, but just didn't feel like starting another useless fight with all the no-code digi types who figgered they could suppress CW just that much easier by insisting it is a digital mode. Sorry, yer out in left field again. Problem is, uh, season's over.

Dick C
BTW, which are you - lid, kid or space cadet?

5655. CEPT/IARP/ULS Rules effective date (USA)

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-19 00:00:00 UTC
From: David R Tucker <drt@world.std.com>
Message-ID: <ffo3e6chfq9.fsf@world.std.com>
Source record: 155404
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,uk.radio.amateur

People have been interested in this and I haven't seen the information available anywhere, so...

The FCC rules for CEPT, IARP, and ULS have been published in the Federal Register (14 Dec 1998) and will go into effect on 12 Feb 1999. In addition to allowing eligible CEPT and IARP holders to operate in the US with all frequency privileges (all above 30 MHz for Class 2), the new rules allow all eligible foreign licensees to operate without obtaining a permit ahead of time. The new rules also implement the Universal Licensing System.

A listing of the new sections for Part 97 follows (page numbers refer to the Federal Register). See especially 97.107 and 97.3 for eligibility, and 97.107 and 97.301 for privileges. (The full text of the current US rules is available from http://oak.oakland.edu:8080/pub/hamradio/arrl/infoserv/rib/part97.txt and other places.)

For US licensees to operate in CEPT countries, the FCC has to publish a trilingual public notice translating the US license. Presumably, they will also have to wait for the rules allowing CEPT licensees to operate in the US to become effective; with any luck, the CEPT/ERO will be fully ready for the agreement to be effective by that time, if they're not already.

(Source: http://www.access.gpo.gov/su_docs/fedreg/a981214c.html; available under "Federal Communications Commission" in text and pdf formats)

==
David R. Tucker, K1TY/VE9DRT drt@world.std.com

"I may be wrong, but I'm not Clearly Erroneous."

==========
PART 97--AMATEUR RADIO SERVICE

448. The authority citation for Part 97 continues to read as follows:

Authority: 48 Stat. 1066, 1082, as amended; 47 U.S.C. 154 and 303. Interpret or apply 48 Stat. 1064-1068, 1081-1105, as amended: 47 U.S.C. 151-155, 301-609, unless otherwise noted.

449. Section 97.3 is amended by removing the numbers in front of each defined term in the definitions and inserting new definitions for

CEPT radio-amateur license, IARP, and ULS (Universal Licensing System) to read as follows:

Sec. 97.3 Definitions

CEPT radio-amateur license. A license issued by a country belonging
to the European Conference of Postal and Telecommunications Administrations (CEPT) that has adopted Recommendation T/R 61-01 (Nice 1985, revised in Paris 1992 and by correspondence August 1992).
IARP. International Amateur Radio Permit. A document issued pursuant to the terms of the Inter-American Convention on an International Amateur Radio Permit by a country signatory to that Convention, other than the United States. Montrouis, Haiti. AG/ doc.3216/95.
ULS (Universal Licensing System). The consolidated database, application filing system and processing system for all Wireless Telecommunications Services.
450. Section 97.5 is amended by revising the introductory text of paragraph (a) and paragraphs (b), (c) and (d) and adding paragraph (e) to read as follows:

Sec. 97.5 Station license grant required.

(a) The station apparatus must be under the physical control of a person named in an amateur station license grant on the ULS consolidated license database or a person authorized for alien reciprocal operation by Sec. 97.107 of this part, before the station may transmit on any amateur service frequency from any place that is:
* * * * *
(b) The types of station license grants are:
(1) An operator/primary station license grant. One, but only one, operator/primary station license grant may be held by any one person. The primary station license is granted together with the amateur operator license. Except for a representative of a foreign government, any person who qualifies by examination is eligible to apply for an operator/primary station license grant.
(2) A club station license grant. A club station license grant may be held only by the person who is the license trustee designated by an officer of the club. The trustee must be a person who holds an Amateur Extra, Advanced, General, Technician Plus, or Technician operator license grant. The club must be composed of at least four persons and must have a name, a document of organization, management, and a primary
purpose devoted to amateur service activities consistent with this part.
(3) A military recreation station license grant. A military recreation station license grant may be held only by the person who is the license custodian designated by the official in charge of the United States military recreational premises where the station is situated. The person must not be a representative of a foreign

government. The person need not hold an amateur operator license grant.
(4) A RACES station license grant. A RACES station license grant may be held only by the person who is the license custodian designated by the official responsible for the governmental agency served by that civil defense organization. The custodian must be the civil defense official responsible for coordination of all civil defense activities in the area concerned. The custodian must not be a representative of a foreign government. The custodian need not hold an amateur operator license grant.
(c) The person named in the station license grant or who is authorized for alien reciprocal operation by Sec. 97.107 of this Part may use, in accordance with the applicable rules of this Part, the

[[Page 68978]]

transmitting apparatus under the physical control of the person at places where the amateur service is regulated by the FCC.
(d) A CEPT radio-amateur license is issued to the person by the country of which the person is a citizen. The person must not:
(1) Be a resident alien or citizen of the United States, regardless
of any other citizenship also held;
(2) Hold an FCC-issued amateur operator license nor reciprocal permit for alien amateur licensee;
(3) Be a prior amateur service licensee whose FCC-issued license was revoked, suspended for less than the balance of the license term and the suspension is still in effect, suspended for the balance of the
license term and relicensing has not taken place, or surrendered for cancellation following notice of revocation, suspension or monetary forfeiture proceedings; or
(4) Be the subject of a cease and desist order that relates to amateur service operation and which is still in effect.
(e) An IARP is issued to the person by the country of which the person is a citizen. The person must not:
(1) Be a resident alien or citizen of the United States, regardless
of any other citizenship also held;
(2) Hold an FCC-issued amateur operator license nor reciprocal permit for alien amateur licensee;
(3) Be a prior amateur service licensee whose FCC-issued license was revoked, suspended for less than the balance of the license term and the suspension is still in effect, suspended for the balance of the
license term and relicensing has not taken place, or surrendered for cancellation following notice of revocation, suspension or monetary forfeiture proceedings; or
(4) Be the subject of a cease and desist order that relates to amateur service operation and which is still in effect.
451. Section 97.7 is revised to read as follows:

Sec. 97.7 Control operation required.

When transmitting, each amateur station must have a control operator. The control operator must be a person:
(a) For whom an amateur operator/primary station license grant appears on the ULS consolidated licensee database, or
(b) Who is authorized for alien reciprocal operation by Sec. 97.107
of this part.
452. Section 97.9 is revised to read as follows:

Sec. 97.9 Operator license grant.

(a) The classes of amateur operator license grants are: Novice, Technician, Technician Plus (until such licenses expire, a Technical Class license granted before February 14, 1991, is considered a Technician Plus Class license), General, Advanced, and Amateur Extra. The person named in the operator license grant is authorized to be the control operator of an amateur station with the privieges authorized to the operator class specified on the license grant.
(b) The person named in an operator license grant of Novice, Technician, Technician Plus, General or Advanced Class, who has properly submitted to the administering VEs, a FCC Form 605 document requesting examination for an operator license grant of a higher class,
and who holds a CSCE indicating that the person has completed the necessary examinations within the previous 365 days, is authorized to exercise the rights and privileges of the higher operator class until a
final disposition of the application or until 365 days following the passing of the examination, whichever comes first.
453. Section 97.13 is amended by revising paragraph (a) and the last sentence of paragraphs (b) and (c)(2) to read as follows:

Sec. 97.13 Restrictions on station location.

(a) Before placing an amateur station on land of environmental importance or that is significant in American history, architecture or culture, the licensee may be required to take certain actions prescribed by Secs. 1.1305-1.1319 of this chapter.
(b) * * * Geographical coordinates of the facilities that require protection are listed in Sec. 0.121(c) of this chapter.
(c) * * *
(2) * * * Further information on evaluating compliance with these limits can be found in the OET Bulletin Number 65, ``Evaluating Compliance with FCC-Specified Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields.''
454. Section 97.15 is revised to read as follows:

Sec. 97.15 Station antenna structures.

Owners of certain antenna structures more than 60.96 meters (200 feet) above ground level at the site or located near or at a public

use
airport must notify the Federal Aviation Administration and register with the Commission as required by Part 17 of this chapter.
455. Section 97.17 is revised to read as follows:

Sec. 97.17 Application for new license grant.

(a) Any qualified person is eligible to apply for a new operator/primary station, club station or military recreation station license grant. No new license grant will be issued for a RACES station.
(b) Each application for a new amateur service license grant must be filed with the FCC as follows:
(1) Each candidate for an amateur radio operator license which requires the applicant to pass one or more examination elements must present the administering VEs with all information required by the rules prior to the examination. The VEs may collect the information required by these rules in any manner of their choosing, including creating their own forms. Upon completion of the examination, the administering VEs will immediately grade the test papers and will then issue a certificate for successful completion of an amateur radio operator examination (CSCE) if the applicant is successful. The VEs will send all necessary information regarding the candidate to the Volunteer-Examiner Coordinator (VEC) coordinating the examination session. Applications filed with the Commission by VECs must be filed in an electronic batch file.
(2) For a new club or military recreation station license grant, each applicant must present all information required by the rules to an
amateur radio organization having tax-exempt status under section 501(c)(3) of the Internal Revenue Code of 1986 that provides voluntary,
uncompensated and unreimbursed services in providing club and military recreation station call signs (``Club Station Call Sign Administrator'') who must submit the information to the FCC in an electronic batch file. The Club Station Call Sign Administrator may collect the information required by these rules in any manner of their choosing, including creating their own forms. The Club Station Call Sign Administrator must retain the applicants information for at least 15 months and make it available to the FCC upon request. The FCC will issue public announcements listing the qualified organizations that have completed a pilot autogrant batch filing project and are authorized to serve as a Club Station Call Sign Administrator.
(c) No person shall obtain or attempt to obtain, or assist another person to obtain, or attempt to obtain, an amateur service license grant by fraudulent means.
(d) One unique call sign will be shown on the license grant of each
new primary, club and military recreation station. The call sign will be selected by the sequential call sign system.
456. Section 97.19 is amended by revising paragraphs (a), (b), (c) and (d)(1) to read as follows:

[[Page 68979]]

Sec. 97.19 Application for a vanity call sign.

(a) The person named in an operator/primary station license grant or in a club station license grant is eligible to make application for modification of the license grant, or the renewal thereof, to show a call sign selected by the vanity call sign system. RACES and military recreation stations are not eligible for a vanity call sign.
(b) Each application for a modification of an operator/primary or club station license grant, or the renewal thereof, to show a call sign
selected by the vanity call sign system must be filed in accordance with Sec. 1.913 of this chapter.
(c) Unassigned call signs are available to the vanity call sign system with the following exceptions:
(1) A call sign shown on an expired license grant is not available to the vanity call sign system for 2 years following the expiration of the license.
(2) A call sign shown on a surrendered, revoked, set aside, canceled, or voided license grant is not available to the vanity call sign system for 2 years following the date such action is taken.
(3) Except for an applicant who is the spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or in-law, and except for an applicant who is a club station license trustee acting with the written consent of at least one relative, as listed above, of a person now deceased, the call sign shown on the license of person now
deceased is not available to the vanity call sign system for 2 years following the person's death, or for 2 years following the expiration of the license grant, whichever is sooner.
(d) * * *
(1) The applicant must request that the call sign shown on the license grant be vacated and provide a list of up to 25 call signs in order of preference.
* * * * *
457. Section 97.21 is revised to read as follows:

Sec. 97.21 Application for a modified or renewed license grant.

(a) A person holding a valid amateur station license grant:
(1) Must apply to the FCC for a modification of the license grant as necessary to show the correct mailing address, licensee name, club name, license trustee name or license custodian name in accordance with
Sec. 1.913 of this chapter. For a club, military recreation or RACES station license grant, it must be presented in document form to a Club Station Call Sign Administrator who must submit the information thereon
to the FCC in an electronic batch file. The Club Station Call Sign Administrator must retain the collected information for at least 15

months and make it available to the FCC upon request.
(2) May apply to the FCC for a modification of the
operator/primary
station license grant to show a higher operator class. Applicants must present the administering VEs with all information required by the rules prior to the examination. The VEs may collect the information required by these rules in any manner of their choosing, including creating their own forms. Upon completion of the examination, the administering VEs will immediately grade the test papers and will then issue a certificate for successful completion of an amateur radio operator examination (CSCE) if the applicant is successful. The VEs will send all necessary information regarding the candidate to the Volunteer-Examiner Coordinator (VEC) coordinating the examination session. Applications filed with the Commission by VECs must be filed in an electronic batch file.
(3) May apply to the FCC for renewal of the license grant for another term in accordance with Sec. 1.913 of this chapter.
(i) For a station license grant showing a call sign obtained through the vanity call sign system, the application must be filed in accordance with Sec. 97.19 of this Part in order to have the vanity call sign reassigned to the station.
(ii) For a primary station license grant showing a call sign obtained through the sequential call sign system, and for a primary station license grant showing a call sign obtained through the vanity call sign system but whose grantee does not want to have the vanity call sign reassigned to the station, the application must be filed with
the FCC in accordance with Sec. 1.913 of this chapter. When the application has been received by the FCC on or before the license expiration date, the license operating authority is continued until the
final disposition of the application.
(iii) For a RACES station license grant, for a club station or military recreation station license grant showing a call sign obtained through the sequential call sign system, and for a club or military recreation station license grant showing a call sign obtained through the vanity call sign system but whose grantee does not want to have the
vanity call sign reassigned to the station, the application must be presented in document form to a Club Station Call Sign Administrator who must submit the information thereon to the FCC in an electronic batch file. The Club Station Call Sign Administrator must retain the collected information for at least 15 months and make it available to the FCC upon request.
(b) A person whose amateur station license grant has expired may apply to the FCC for renewal of the license grant for another term during a 2 year filing grace period. The application must be received at the address specified above prior to the end of the grace period. Unless and until the license grant is renewed, no privileges in this Part are conferred.

(c) A call sign obtained under the sequential or vanity call sign system will be reassigned to the station upon renewal or modification of a station license.
458. Section 97.23 is revised to read as follows:

Sec. 97.23 Mailing address.

Each license grant must show the grantee's correct name and mailing
address. The mailing address must be in an area where the amateur service is regulated by the FCC and where the grantee can receive mail delivery by the United States Postal Service. Revocation of the station
license or suspension of the operator license may result when correspondence from the FCC is returned as undeliverable because the grantee failed to provide the correct mailing address.
459. Section 97.25 is revised to read as follows:

Sec. 97.25 License term.

An amateur service license is normally granted for a 10-year term.
460. Section 97.27 is amended by revising the section heading and paragraph (a) introductory text to read as follows:

Sec. 97.27 FCC modification of station license grant.

(a) The FCC may modify a station license grant, either for a limited time or for the duration of the term thereof, if it determines:
* * * * *
461. Section 97.29 is revised to read as follows:

Sec. 97.29 Replacement license grant document.

Each grantee whose amateur station license grant document is lost, mutilated or destroyed may apply to the FCC for a replacement in accordance with Sec. 1.913 of this chapter.
462. Section 97.107 is revised to read as follows:

Sec. 97.107 Reciprocal operating authority.

A non-citizen of the United States (``alien'') holding an amateur service

[[Page 68980]]

authorization granted by the alien's government is authorized to be the control operator of an amateur station located at places where the amateur service is regulated by the FCC, provided there is in effect a multilateral or bilateral reciprocal operating arrangement, to which the United States and the alien's government are parties, for amateur service operation on a reciprocal basis. The FCC will issue public announcements listing the countries with which the United States has such an arrangement. No citizen of the United States or person holding

an FCC amateur operator/primary station license grant is eligible for the reciprocal operating authority granted by this section. The privileges granted to a control operator under this authorization are:
(a) For an amateur service license granted by the Government of Canada:
(1) The terms of the Convention Between the United States and Canada (TIAS No. 2508) Relating to the Operation by Citizens of Either Country of Certain Radio Equipment or Stations in the Other Country;
(2) The operating terms and conditions of the amateur service license issued by the Government of Canada; and
(3) The applicable rules of this part, but not to exceed the control operator privileges of an FCC-granted Amateur Extra Class operator license.
(b) For an amateur service license granted by any country, other than Canada, with which the United States has a multilateral or bilateral agreement:
(1) The terms of the agreement between the alien's government and the United States;
(2) The operating terms and conditions of the amateur service license granted by the alien's government;
(3) The applicable rules of this part, but not to exceed the control operator privileges of an FCC-granted Amateur Extra Class operator license; and
(c) At any time the FCC may, in its discretion, modify, suspend or cancel the reciprocal operating authority granted to any person by this
section.
463. Section 97.119 is amended by revising paragraph (g) to read as
follows:

Sec. 97.119 Station identification.

* * * * *
(g) When the station is transmitting under the authority of Sec. 97.107 of this part, an indicator consisting of the appropriate letter-numeral designating the station location must be included before
the call sign that was issued to the station by the country granting the license. For an amateur service license granted by the Government of Canada, however, the indicator must be included after the call sign.
At least once during each intercommunication, the identification announcement must include the geographical location as nearly as possible by city and state, commonwealth or possession.
464. Section 97.201 is amended by revising paragraph (a) to read as
follows:

Sec. 97.201 Auxiliary station.

(a) Any amateur station licensed to a holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be an auxiliary station. A holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be the control operator of an auxiliary station, subject to
the privileges of the class of operator license held.
* * * * *
465. Section 97.203 is amended by revising paragraph (a) to read as
follows:

Sec. 97.203 Beacon station.

(a) Any amateur station licensed to a holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be a beacon. A holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be the control operator of a beacon, subject to the privileges of the class of
operator license held.
* * * * *

Sec. 97.205 [Amended]

466. Section 97.205 is amended by removing and reserving paragraph (f) and removing paragraph (h).
467. Section 97.207 is amended by revising the introductory text of
paragraph (g) and paragraphs (h) and (i) to read as follows:

Sec. 97.207 Space station.

* * * * *
(g) The license grantee of each space station must make two written
pre-space station notifications to the International Bureau, FCC, Washington, DC 20554. Each notification must be in accord with the provisions of Articles 11 and 13 of the Radio Regulations.
* * * * *
(h) The license grantee of each space station must make a written in-space station notification to the International Bureau no later than
7 days following initiation of space station transmissions. The notification must update the information contained in the pre-space notification.
(i) The license grantee of each space station must make a written post-space station notification to the International Bureau no later than 3 months after termination of the space station transmissions. When the termination is ordered by the FCC, notification is required no
later than 24 hours after termination.
20. Section 97.301 is amended by revising the introductory text of

paragraphs (a) and (b) to read as follows:

Sec. 97.301 Authorized frequency bands.

* * * * *
(a) For a station having a control operator who has been granted a Technician, Technician Plus, General, Advanced, or Amateur Extra Class operator license or who holds a CEPT radio-amateur license or IARP of any class:
* * * * *
(b) For a station having a control operator who has been granted an
Amateur Extra Class operator license or who holds a CEPT radio-amateur license Class 1 license or Class 1 IARP:
* * * * *
468. Section 97.505 is amended by revising paragraph (a)(10) to read as follows:

Sec. 97.505 Element credit.

(a) * * *
(10) An unexpired (or expired but within the grace period for renewal) FCC-granted Novice, Technician Plus (including a Technician Class operator license granted before February 14, 1991), General, or Advanced Class operator license document, and a FCC Form 605 document containing:
* * * * *
469. Section 97.509 is amended by revising paragraph (i) to read as
follows:

Sec. 97.509 Administering VE requirements.

* * * * *
(i) When the examinee is credited for all examination elements required for the operator license sought, 3 VEs must certify that the examinee is qualified for the license grant and that the VEs have complied with these administering VE requirements. The certifying VEs are jointly and individually accountable for the proper administration of each examination element reported. The certifying VEs may delegate to other qualified VEs their authority, but not their accountability, to administer individual elements of an examination.
* * * * *
470. Section 97.519 is amended by revising paragraph (b) introductory text and paragraphs(b)(1), (b)(2) and (b)(3) to read as follows:

[[Page 68981]]

Sec. 97.519 Coordinating examination sessions.

* * * * *
(b) At the completion of each examination session, the

coordinating
VEC must collect applicant information and tests results from the administering VEs. Within 10 days of collection, the coordinating VEC must:
(1) Screen collected information;
(2) Resolve all discrepancies and verify that the VE's certifications are properly completed; and
(3) For qualified examinees, forward electronically all required data to the FCC. All data forwarded must be retained for at least 15 months and must be made available to the FCC upon request.

So he took his 21 minute afternoon "break" in the oval office with Monica ..... Seriously , it was perhaps unwise, stupid, ignorant , bone-headed, immoral , probably all of those things but I hardly see him getting grilled by a Grand Jury for a _legal_ (though stupid) act. If you have any law that he broke by his actions with _Monica_ kindly post it here.

>
>Clinton himself said any president who whould lie to the
>American people should be impeached.

His sex life is none of my nor Ken Starr's business. I fear a PERsecutor that issues subpoenas to bookstores and questions presidential aides about "who in the press have you talked to?" and takes a shot at attorney-client privilege far more than a sexually cheating president.

You can have the last blast , I've drifted way off topic , unfortunately some of the most interesting topics are off topic for this NG.

Cheers ....

Toshiba Satellite T1910 100MHz Pentium Laptop w/ball track Mouse for sale
Comes with 200 Meg Hard Drive, 20 Meg RAM
Tons of programming, including:
CT Logger (Latest version)
Hostmaster Packet Program
Morse Code Trainer
Morse Code PILE UP trainer
Windows 3.11
DOS 6.22
Full internet capabilities from home, or in your car (via cell phone)
Netscape Navigator 4.1 (with all the extras)
Word Perfect 6.1
Lotus 123 r5
Max Time (Optimizes battery use)
Anti-Virus
Comes with Carrying case, Phone plugs for Internet,
PCMCIA modem, extra battery, and AC adapter.
lots more! (too much to list)
Laptop is optimized for Fastest Performance.
(Faster than my tower with similar memory)
Asking $600

An open letter to Bill Pasternak, WA6ITF....This is posted on this Newsgroup, as it concerns every ham and SWL that listens to Newsline, either on a local repeater, or on one of the dial-up lines around the Country..

The dial up numbers are provided and maintained by several Amateurs at their own cost in several Cities.. <-------

The NEWSLINE production is done by Bill at home and at his place of business (KTTV) in Los Angeles..(Some long distance interviews and reports are involved..)

Bill, I think everyone who listens to Newsline deserves to know why all the 'begging' for funds on the broadcasts???

What is this current tremendous 'overhead' you have at Newsline?? Many of the supporters and listeners, hams or not, should have a little explanation of the desperate financial situation mentioned on the recent broadcasts!

Kinkster is the biggest Netcop when it comes to off-topic messages. He'll
respond ten or twenty times to an off-topic thread, even though he doesn't
like it.

5672. KV4FZ's Couragous Fight

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-20 00:00:00 UTC
From: n0vfp@aol.com
Message-ID: <19981220164419.14012.00002106@ng26.aol.com>
Source record: 155171

KV4FZ has been an active amateur radio operator since 1954 when he was first licensed in the Midwest as W0VXO. While working his way through college (1960-64), he spent summers teaching at several camps for the physically handicapped. He was highly successful in teaching seriously disabled campers about the potential of amateur radio. Many of these campers went on to fully qualify for their amateur radio licenses.

His father, W.B. Schoenbohm, was the founder of Courage Center in Minneapolis. Herb was a major force in pushing for the initiation of the Handi-Ham program, which is now widely recognized as the premier service organization for disabled radio amateurs. After college, Herb worked as a international sales representative for Gates Radio, Harris Corp, and Collins Radio. He sold and distributed broadcast equipment to the international market, primarily Latin America. In 1968, he moved to the U.S. Virgin Islands with the intent of better serving his customers. His wife Monika was, at that time. a service representative for Pan AmericanAirways. KV4FZ was very active in DX work and, as a frequent traveler, put many new countries on 160 meters. He was instrumental in getting Stew Perry, W1BB, the necessary countries to be the first ham ever to get DXCC on 160 meters. He also gave G3IOR the last country he need (VP2EFZ, Anguilla) for the first ever DXCC via satellite (Oscar 7).

During the 1970's, KV4FZ was able to set CQ World Wide records 160-10 in almost ever category except 40 meters. He was also very active in supporting the IARU Intruder Watch after encountering frequent yachts in the area that had acquired licenses of convenience for a fee. At that time, FCC Commissioner Margita White appointed KV4FZ as the Virgin Islands SECC. The SECC has responsibility to plan and manage the operation of radio communications resources during island emergencies. Herb fulfilled that role magnificently and was named a Virgin Island "Hero" after Hurricane Hugo destroyed most of St. Croix in 1989. Herb received this award for keeping vital communications circuits open during the crisis.) Herb also took a detailed interest in how most of these "pirates" has a close association with the so-called "service nets" on the top end of 20 meters. He joined the net and attended several of the hamfest functions. Only then did he learn how deliberate and sordid was the manner in which net members misused the amateur spectrum as a means to provide an international telephone toll by-pass service. One of the most flagrant of all these operations was the "INTERCON" network operating, for the most part, on 14.313 MHz. Herb began detailed monitoring of their operation and intercepted many communications that were appalling to say the least. In 1979, KV4FZ listening to what appeared to be a "business connection" between WB6MID/8R1 in Jonestown, Guyana and WB6MID in Ukia, California.
Herb broke in and informed the net personnel that this type of operation on an amateur frequency was illegal. Furthermore, Herb stated that their

communication constituted international business communications related to funds transfers and the procurement of equipment and supplies. The net hierarchy reacted by excoriating him for his "embarrassing comments" and ignoring the violations. The net bluntly told him that the Jonestown Operation was a missionary group and that they had special permission from the Carter administration to use ham radio to further their "worthy cause". Herb persisted with his concern and was quickly declared 'PERSONNA NON GRATA" by Robert Sternberg, AA4EE, a tax attorney who claimed to be the nets legal advisor. Herb expressed his concerns to other net operators participating in the companion "Maritime Mobile Net" such as Dick Eastman, N5FX and Mike Galego, KA4MUJ. Several Maritime Net members agreed that some of the more criminal practices, such as one ringers and "maintenance charges" for providing long distance toll free connections practically anywhere in the world, must be curtailed.

Some of the net cabal hierarchy rebuffed all attempts to institute reform and a nasty power struggle ensued. Eastman and Galego were "ex-communicated" by Ruth Hoffman N4LMC, Eddie Ricca K4PT and Art Candell N4PCK. The latter began a propaganda campaign, replete with false stories and personal attacks, that promised to destroy any net opposition that sought reform. The net members objected to the lively participation of KV4FZ, KA4MUJ, and N5FX (a former net director) who frequently brought to the attention of net participants certain stations whose conduct violated the FCC and International Rules.

During the 1980's, net members began a campaign of coordinated complaints to the FCC claiming that the aforementioned three were causing willful and malicious interference to the net. N5FX and KV4FZ both received prefabricated FCC citations at the behest of the net command. Both were able to get the FCC to nullify their actions based on the fact that their constructive comments did not constitute "malicious interference" and that certain members of the net themselves were engaged in a premeditated campaign of harassment and interference.

Several members of the net were subsequently caught interfering with the communications of KV4FZ and KA4MUJ. They include K2BFI and AA5LY. AA5LY later gave the FCC, and supporters of KV4FZ and KA4MUJ, a complete and accurate accounting of the plot by disgruntled net members to "settle the score". That plan included a vigorous campaign of letter writing to politicians in Washington in an attempt to pressure them into punishing the net detractors.

N4PCK had his own reason to get even. He had known Herb while he was operating in Haiti as HH2A and was very active on the INTERCON net. Herb had learned, through his contacts in Haiti, that Candell had a serious problem. He would solicit young pre-teen boys and pay them a quarter to perform sex acts on him. A prominent Haitian administrator was told, by his son, that the young boy had been abused and sodomized by Candell. There was no arrest or trial. But the arrival of the outraged local citizenry at Candell's hillside villa dictated that Candell receive an armed escort to the airport. Candell then appeared in the Orlando, Fl area, illegally using the call HH2A/W4 and actively engaging in net activities. The net

watchdogs, now known as the B.A.R.F. (The Better Amateur Radio Federation), pointed out that Candell was not eligible to use a Haitian call sign in the United States unless he was a Haitian citizen and had been granted a proper permit from the FCC.

Again the net members supported Candell and sought to silence Herb. However, the FCC ruled that Candell could no longer operate from Florida unless he obtained a valid U.S. amateur radio license. Candell later paid off a VEC in Silver Springs, Fl to fraudulently give him a passing grade on a General Class license examination. The VEC was later sanctioned but Candell was neither removed from the air nor required to be re-examined. In 1989 Candell was finally arrested and convicted of multiple incidents of child molestation. He was given a suspended sentence that was partially based upon INTERCON's assertion that he had been rehabilitated by amateur radio service in their net. (Candell was arrested and convicted again in 1994 for carnal assault on several boys between 8 and 10 years of age whom he had invited into home under the pretense of showing them his ham station. He has been institutionalized for several years but his ham license was, nonetheless, renewed in 1996 for another ten years.)
In 1990, Candell continued with his plot to destroy and discredit KV4FZ in retaliation for Herb's alleged "interference" with the net's "business". Candell actively leagued with other enemies of KV4FZ such as Pat Miller, KP2J in St. Thomas, and Richard Whiten, WB2OTK. Miller supplied Whiten the so-called "proof" of a crime by playing a recorded tape on both 20 and 75 meters. Miller introduced Candell to the operator of a long distance resale service that KV4FZ briefly subscribed to in 1987. Some of the users of the CALLS (Caribbean Automated Long Line Service) system (a six digit access code system on which half the possible combinations of digits gained the caller access to a WATTS line) had been illegally abusing the CALLS scheme. Malcolm Ford had claimed losses to the tune of $200,000 and needed a scapegoat. Thereupon, it was decided that a criminal case should be manufactured against Herb, KV4FZ.

Ford needed this falsification to support his ludicrous claim that the impending bankruptcy of CALLS was not due to his inept management. Instead, it proffered that somehow Herb had caused his business to fail. This was vital to Ford because he was still salaried as the GM of CALLS even though they were in receivership. Ford's efforts failed and he was physically removed from the operation after the Federal Bankruptcy judge found him raiding the treasury and assets of CALLS.

However, all during this time, Ford was fabricating evidence in an attempt to establish a connection between CALLS financial failure and KV4FZ. Yet the Department of Justice continually refused to prosecute Herb. This resulted in even more acrimonious letters to officials and politicians in a further attempt to implicate Herb as the culprit.

Malcolm Ford, the previous owner of CALLS, was then under investigation for bankruptcy fraud. In an attempt to escape indictment, Ford hired John Ackley, KP2A, to fabricate various reports that would designate Vitelco(a local phone service), STSJ Long Lines, ITT and Herb as coconspirators who

were attempting run him out of business. While this was going on, Ackley was attempting to buy the nearly defunct company for ten cents on the dollar. (Ackley failed but STSJ was able to get the company back on its feet.) Miller, Hoffman, Candell and others intensified their letter writing campaign to hundreds of politicians in Washington urging them to investigate. They even began writing letters to newspapers, claiming that politicians were shielding KV4FZ from prosecution. In these hate letters to public officials, Herb was equated with organized crime, drug trafficking, and high level political corruption. In 1991, KV4FZ was writing a hard-hitting column for the St. Croix Avis newspaper. Herb frequently attacked political corruption so it stood to reason that he might have some enemies in government. Herb had articles published about the check kiting and House Banking fraud perpetrated by the Virgin Island Delegate to Congress, Ron Delugo. Outraged and distraught, Delugo (who had designs upon becoming the next governor of the Virgin Islands) assigned a full time staff attorney (Sylvester Julian) to explore methods of pressuring the FCC, the Secret Service, and the Department of Justice into investigating Herb and "putting a 'severe hurting' on him".

However an obstacle remained in the path of their plan to annihilate KV4FZ. Some at the FCC supported Herbs activities on behalf of the amateur radio service. Additionally he was elected as Vice Chairman of the Virgin Islands Republican Committee, which made him a frequent delegate to the GOP Conventions. Furthermore, Herb was personally acquainted with President Bush. Herb's father had served on the President's Commission for the Handicapped.

Initially, each and every involved agency claimed there was not enough evidence to support a charge against Herb. Subsequent to this, John Ackley, KP2A, manufactured a list of 660 telephone calls that were prearranged to add up to $1,047 in value. This was exactly forty-seven dollars over the amount needed to achieve the threshold of prosecution. Delugo wrote threatening letters to various government agencies threatening that he would see to it that their funding was severely curtailed if he did not receive figuratively receive Herb's head on a silver platter. Ruth Hoffman constantly badgered the acting U.S. Attorney for the Virgin Islands, Terri Halpern. This continued to the point that Hoffman was finally ordered to stop harassing Halpern. However, as a Congressman to the VI, Delugo was in a position convince colleagues not to block Halpern's confirmation. Delugo reportedly told Halpirn that, unless she prosecuted Herb Schoenbohm, she would never become U.S. Attorney. (Halprin was fired in 1992 by the DOJ for ethical lapses after the Office of Professional Responsibility investigated the severe criticism, from the 3rd Circuit Court of Appeals, that Halpern received for the "knowing use of false evidence" to secure a conviction. Nevertheless, the trial prosecutor was cleared by OPR because they were unable to prove that the prosecutor actually knew the evidence used was false.)

Herb's trial took place in April 1991 (four months past the five-year statute of limitations). Both Ackley and Miller testified, under oath, as to the veracity and accuracy of the incriminating evidence they had assisted in concocting. (Miller offered his so-called "caught in the act" tape of Herb dialing "illegal access codes". Ackley presented his list of random numbers that he verified, as a government expert witness, were all

telephone numbers dialed by defendant Schoenbohm.

The puzzled and confused jury convicted Herb on all three counts of Title 18, SS 1029(a): 1,2 and 3, which is, in reality, an illegal credit card statute. This statute has been used infrequently to curb the illegal use of cloned cellular telephones. After trial, Schoenbohm with the help of Bob Sheron, W4ASX, closely scrutinized the evidence and began tracking down the parties that Ackley had claimed, under oath, that Herb had illegally called. A most amazing discovery unfolded: most of the persons contacted did not know Herb Schoenbohm or had never had a telephone conversation with him. Amazingly, they had already given statements confirming this fact to the Secret Service investigators. Most had even identified persons, other than Schoenbohm, whom had called them from the Virgin Islands during the timeframe in question (1987). Interestingly, the court refused to allow Schoenbohm to verify the numbers before trial.

The court incredibly claimed that it needed to protect the potential witnesses from pre-trial disclosure! After trial, armed with affidavits from the persons alleged to have received Herb's "illegal" calls, Herb moved for a Judgment of Acquittal not withstanding the jury verdict. The court granted the motion on all counts but one (Possession or Use of a Counterfeit Access Device). The court maintained that the Miller tape proved that something was amiss and the jury could correctly deduce from this that the law had been broken. This court decision differs from the previous decision in that the device is similar to, but not exactly the same as, a valid device and does not require the threshold of over $1000 in use. (The irony in this entire matter is that Herb freely admitted to using the service briefly in 1987. He was a bona fide customer and the total actual use amounted to $106. CALLS finally was required by the court to produce Herb's check for $104 that they had received in1987. They admitted that they did not cash the check but, instead, held it as an aid in the plot to entrap KV4FZ.) When the court vacated the judgment requiring two months prison time, Herb's detractors were enraged and, once again, began the political letter writing campaign. Now the claim was that Herb had used amateur radio in the commission of a crime and should be taken off the air. They sent the highly doctored Miller Tapes to the FCC in an attempt to prove their incredible theory. Their letters were full of outrage over the fact that Herb had once more cheated Madam Guillotine and he still on the air making waves. Some were furious due to the fact that they had given financial support to certain political candidates and nothing permanent had been done to rid the airwaves of this "pest", KV4FZ. (Ruth Hoffman even conveyed gifts to officials at the FCC in attempt to bribe public servants. One such official, William Cross, was investigated for leaking internal information to Ruth Hoffman in the KV4FZ matter. Hoffman then disseminated this information for use in the hate campaign against Herb.)

KV4FZ then was subsequently forced to embark upon a long and costly struggle for justice. He has had to fight the refusal to renew his amateur license by demanding a hearing before the FCC. (The refusal to renew is rarely used as a procedure and has been given the title: "The FCC Death Penalty" because the entire burden of proof is placed upon the licensee.)

At the first FCC hearing, Administrative Law Judge Luton ruled against KV4FZ. However, upon higher review, the FCC General Counsel refused to accept Judge Luton's findings and remanded the matter for reconsideration. The principle issue is whether or not KV4FZ had used amateur radio in the furtherance of the commission of a crime. This time the ALJ ruled that there was nothing in the evidence (The Miller Tape) that was illegal in any way. The concluded that Schoenbohm actually was dialing ordinary and valid Virgin Islands telephone numbers. He was not entering illicit access codes to make long distance calls.

The ALJ did, however, agree with the Wireless Telecommunications Bureau (WTB) assertion that, by giving out the telephone number, in 1994, of Herb's future boss, Congressman Frazer (whom, incidentally ran Delugo out of office), Herb was violating a solicitation restriction of ex-parte rules. This was despite the fact that WTB had conceded that no actual ex-parte violation had taken place. The ALJ ruled that, by attempting to explain his conviction as a De Minimus violation rather than a crime of major impact, he was trying to mislead the trial of fact. (In administrative law, the assertion of innocence is a crime even if the accused is actually innocent! It is akin to Hobson's Choice or the Salem witch trials whereupon, if the tied woman is thrown into the pond, and she does not drown, then she must surely be a witch and, thus, must be burned to death.

Herb had been fighting the remaining count through the Federal Courts and has even succeeded in convincing the courts to severely criticize the DOJ for their handling of the case. Nevertheless, they refused to reverse the remaining conviction because of the nearly impossible to define "standard of harmless error". The appellate court ruled that the motion for Judgment of Acquittal had been filed too late even though the trial judge had granted an extension based on the emergence of irrefutable proof that the prosecution had used false evidence. As a result they were barred from considering the sufficiency of evidence matter at this late date under the rigorous standards of Habeas Corpus review. However, a positive revelation in the latest FCC decision is that it clearly vindicates Herb on the original charge of using ham radio in the commission of a crime. It also conclusively proves that his detractors engaged in perjury before a Federal Grand Jury and Petit Jury trial.

Many on the local scene recognized the truth. The Trial Judge, The Honorable Ann Thompson, wrote a letter of support and praise on Herb's behalf. The Governor of the Virgin Islands did not simply restore Herb's government career. He elevated Herb to a position of higher authority with more responsibility to the island and a significantly higher salary. He was also employed, as a part-time field representative, on the congressional staff of newly elected Congressman Frazer.

The FCC WTB attorneys characterized these as "political jobs", unworthy of consideration as a mitigating factor in Herb's "rehabilitation"!) Although Herb had a Congressional Floor Pass, granting him direct access to the ears of the politicians, there is no evidence that he ever abused his position to lobby House members against the FCC. This is in spite of the fact that the bureaucrats inside the FCC are very much afraid that Herb might just whisper in

the ear of someone who controls their finances. Because of this, Herb is not allowed to take his case to the very people who would be horrified to learn the truth about how he has been treated. These are the people who could finally put a stop to this travesty of justice. Yet, Herb's detractors are on the phone daily, pushing those in power to get him off the air, one way or another. When will the voice of reason and justice be heard?

Some of us do not like the odds and are willing to help end this fiasco. Herb's legal bills are soaring but he continues the fight. His attorney, Larry Colby (a licensed ham), has stated that when this issue gets into the proper arena, Herb will be totally vindicated. But this can only happen if Herb is allowed to fight on and get his case into the proper arena. Right now, it is still in a forum where all the rules are stacked against the licensee. When the matter gets out of the FCC, and into the D.C. Circuit Court, then the playing field is closer to being balanced. There, the Feds don't have the automatic upper hand that allows them to do what their political puppet-masters demand.

A small donation of $25, $50 or $100 will go a long way in continuing the fight for justice. There is an underlying principle that must be preserved. It is not keeping Herb on the air that drives his supporters. It is the realization that if they can deprive KV4FZ of justice then they can deprive any of us of justice. Today they are persecuting KV4FZ. Tomorrow it could be you. You could be railroaded just because somebody doesn't agree with your position on the nets, phone patching, or apple pie. Herb is working vigorously to get the funds together for his appeal. His attorney Larry Colby is attempting to get an extension of time to file exceptions.

Two brief statements.

1. The parameters of polls are hardly ever mentioned. If a news media outlet in New York City wanted to broadcast a pro Clinton poll, they could send a handful of gophers up to Harlem and interview a few thousand people. Black Americans overwhelming support Clinton, so the poll would show "90% of the people in our latest poll think Clinton is the greatest thing since popcorn!" Polls don't mean a heck of a lot, and you cannot govern by polls. Also the extreme liberal bias of many of the east coast big city newspapers and TV stations is very well known.

2. Al Gore was quoted as saying " President Clinton will go down in history as one of our greatest presidents" Is this a genuine and truthful statement? Does this man really think this? My god.

When you have a QSO on the air do you only discuss radio and electronic topics? I agree that if "off topic" stuff were to "get out of hand" there would be a problem for sure. On the other hand these are rare and truly extraordinary political events. It seems natural that hams might want to comment on these events "among our own" The overwhelming majority of topics still deal with radio stuff - just skip the stuff you find objectionable. An individual is usually their own best censor.

Gary Coffman wrote:
"Morse is a code with five symbols..."

You only need two. Let's label them 0 and 1. A dit is a single 1,
a dah consists of three ones, an element space is a single 0, a
character space is three zeros, and a word space is seven zeros.
You don't need five seperate entities (your "five finger" example)
to convey intelligence utilizing this code.

These newsgroup police really are a hoot! I don't see any problem discussing current events which are inherently more important than amateur radio....that is why threads have headers, dude, you only have to read the ones you like....geez!

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 388
BID: $OPDX.388
December 21, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2KQ, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N6RT, WA6KBL, NA7DB, KU9Z, AC0X, DJ5AV & DX News Letter, DL3DXX, F6AJA & LNDX, G4BUE & DX News Sheet, G4UZN, G0OIL, JA1ELY, LU7EC, OH2BVE, ON5NT, PS7AB, RA6CO, RA0FF, SQ9FVR, VK1TX and YB1AQS for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy Holiday and Season's Greetings". Also, we would like thank the many who have contributed information over the year (there are too many to list). REMEMBER, without them there would not be an OPDX Bulletin.

3B9, RODRIGUEZ ISLAND. "The Daily DX" reports that Frank Smith, AH0W, from the Midway-Kure DX Foundation, says that the upcoming DXpedition to Rodriguez Island is now planned for the first of April, 1999. This will be a multi-national DXpedition with operators from 5 countries. More details should be forthcoming.

4U1UN, UNITED NATIONS HQ. Don/K2KQ and Piero/IK2BHX have been keeping 4U1UN active lately. This past weekend they were active on the WARC bands, 80/160 meters and on RTTY. QSL via W6TER.

5X, UGANDA. The French DX Bulletin "LNDX" reports that F5JDG and F6BDS will be 5X1MA and 5X1LG, respectively, now until December 25th. They are there for business/work, and they will try to be active on 40/20/15/10 meters with 100 watts and dipoles.

C5, THE GAMBIA. Dave, G0OIL, informs OPDX that he hopes to be active for one week beginning January 28th (1999). His activity will be mainly on RTTY. QSL via his UK callsign, Dave White G0OIL, Rainbow Cottage, Laneham St, Rampton, Nottinghamshire DN22 0JX, England, UK.

EL, LIBERIA. Mark, ON4WW, who was active as EL2WW is now home in Belgium for the holidays. He will return to Monrovia in mid January. He will take his own equipment this time because Mark was having some technical problems with the locally loaned transceiver. He will be active here for several more months. QSL via ON5NT.

FG, GUADELOUPE. "The 59(9) DXReport" states to look for Didier/F5NZO and Eric/F5SSM to be active from here December 24th through January 1st. Activity will be on 80-10 meters with operations on SSB and RTTY, and maybe RS-12. Their callsigns are likely to be FG/homecall.

FO0, AUSTRAL ISLAND. Einar, LA1EE, is currently active on Tubuai Island in the Austral group as FO0EEN. He will be there until December 30th. Most of his activity seems to be on 80 and 40 meters CW. QSL via LA1EE.

FT5W, CROZET ISLAND. Look for Gilles, F5AGL, to be active very soon as FT5WH. His activity will be mainly SSB only. The length of his stay is unknown. QSL via F6KDF, Gendarmerie de Bron, 292 Route de Genas, 69677 Bron, France.

FT5ZH, AMSTERDAM ISLAND DXPEDITION (Begins to close down!). From the latest press release, the operators on Amsterdam Island are nearing the end of their stay on the island. The ship will arrive approximately Wednesday, December 23rd, depending on the weather and the seas. They must be ready to board when it arrives, so they will begin to dismantle the antennas on Monday, December 21st, a few at a time. All the press releases issued this week will be sent to all OPDX InterNet Subscribers as an additional bulletin. Meanwhile, operators continue to be active at various times on the WARC bands and RTTY, as well as the regular HF bands.

FT5, FRENCH ANTARCTICA/FRENCH TERRITORIES IN THE SOUTHERN INDIAN OCEAN. The DX Lyon Gang reports to look towards January for activity by FT5ZJ from Amsterdam Island. Specific dates on arrival and departure were not mentioned. Also, look for FT5YG to be active from Terre Adlie (will be there for 1 year). Beginning March and onwards, look for Helios, FT5XN, to be active from Kerguelen. Helios was there once before.

HK, COLOMBIA. The "LNDX" reports that Gerard, F2JD/G0SHN, has received his licence as HK3/G0SHN. He will stay there for one year, maybe two.

NEW OFFICERS. The Twin City DX Association of Minneapolis/St. Paul, Minnesota, has elected the following hams to serve as officers in 1999: President - Tom Lutz W0ZR; Secretary - Greg Fields K0OB and Treasurer - Doug Arntson K0PX.

PACIFIC TRIP TO FIJI (3D2) AND TUVALU (T2). A well known German DX group plans to be active from Nadi and Funafuti between December 24th and January 15th. Their callsign for Fiji will be 3D2DK, and their activity is planned from December 24th through January 1st. The callsign for Tuvalu will be assigned upon arrival and is currently unknown. Their activity is planned for January 2-14th. Operators are DK1BT/Manfred, DK7YY/Falk, DL3DXX/Mar, DL2OAP/Tom and DL8OBQ/Uli. There are two Titanex V80E antennas for extensive lowband activity in their baggage. Also, a 5

element beam will be used for the the higher bands. They will be taking two complete stations with them, including RTTY equipment and maybe even a microphone for some SSB operations. They are currently trying to arrange some kind of "Log Search" for their Web page as well as a regular feedback between you and them by using E-mail/fax. Check their Web page at: http://wwwiti.cs.uni-magdeburg.de/~hoeding/hamradio/3d2_main.html

PACIFIC TRIP TO FIJI (3D2) AND MARQUESAS (FO0). Pekka/OH1RY and Jaakko/OH1MA will be active as 3D2RY and 3D2MA respectively from the Fiji, December 30th until January 6th. Also, look for them to be active as FO0KOL (Pekka) and FO0SIL (Jaakko) from the Marquesas, January 7-13th.

PACIFIC TRIP TO FRENCH POLYNESIA (FO) AND MARQUESAS (FO0). The "LNDX" reports that Alain, F2HE, will be in French Polynesia (also Marquesas) from May to July, 1999. He hopes to be active from several different islands.

PIRATE ACTIVE. Anthony, G4UZN, reports to us that he has been receiving QSLs from USA and Canada for ZA1RSB which was active a week or so ago. Anthony states, "Note for your records this is a pirate."

PY0, FERNANDO DE NORONHA. Iwao, PY8IT, will be active as PY0FT from December 22-28th. This is his second trip to Fernando de Noronha Island. His activities will be mainly 40, 20, 17, 15 and 12 meters, but if conditions are good, he will try 10 and 6 meters. Iwao will be taking his TASCO TSC-200 for SSTV operation. QSL via JA1ELY.

QSL INFO AND NEWS.....
OH0Z and OH0AW QSL go via OH1EH (Ari Korhonen, Kreetalank. 9 As 1, FIN-29200 Harjavalta, Finland

QSL LU7EC via "LUC" SARMIENTO, S/N C.P. 2703, CARABELAS, Bs. As. ARGENTINA or via the bureau.

The logs for the recent German operation TY8A are now available on the German DX Foundation Web page at: http://www.qsl.net/gdxf

Just a quick reminder that the QSL Manager for RM6A (since the CQWW CW Contest) is Joe, W3HNK. QSL all previous QSOs with RM6A (before CQWW CW) to: Sam Dubovtsev, P.O.Box 600, Krasnodar, 350062 Russia.

Tex, VK1TX, has a new QSL Manager, Bill, K1WY. He mentions people can still send either direct, VK1 QSL Bureau, or K1WY.

Special event station SN0KRT, which was active recently to commemorate 13th anniversary of the club station in Piekary, can be QSLed via the bureau to SP9KRT or direct to SP9KRT`s callbook address.

PLEASE TAKE NOTE. Adam, KU9Z, reports he was listed somewhere recently as the QSL Manager for WP2Z. This is incorrect, and the correct QSL Manager is KU9C.

Coly, 3W5FM (home callsign UA0FM), has a new address for QSLs direct: P.O. Box 37, Vladimir, ZIP 600000, Russia

RA0FF which was active in the 1998 CQWW SSB Contest, CQWW CW Contest and the ARRL 10 Meters Contest now has a log search Web site at: http://www.qsl.net/ra0ff/
QSL via N6FF or RA0FF's CBA address (NOTE: If you send direct QSLs to RA0FF, please enclose IRCs in an envelope, but no USD, or use registered mail.).

Doug, N6RT, reports that he has received the color picture QSLs from the printer for their October, 1998, operation from Guadeloupe. QSL requests for FG/N6RT, FG/W6KK, FG/K6RO, FG/N6ED, FG/N6RV, FG/W6SR, and FG5BG (for the 1998 CQWW SSB contest ONLY - via K6RO) will be answered shortly. A log search and twelve pictures from the DXpedition (including a picture of the QSL card) can be found at the Web site: http://members.home.com/dab/n6rt.html

Hannes, DL3NEO, who operated 4U1VIC on November 20th and 21st, can QSL this operation ONLY. He reports that he has been receiving QSLs for other days and operations. He is not the QSL Manager for any other activity of 4U1VIC (e.g. during CQWWDX-Contest Nov. 28/29th). Please look carfully for the given QSL manager.

S2, BANGLADESH. The "DX News Sheet" reports that Bob, G3REP, has applied for a temporary licence to be active again between December 21st and January 31st while waiting for a permanent licence. He hopes to be active on 160m despite the high QRN and will try to find a QTH out of town for the CQ 160 Meter Contest. QSL via homecall.

VQ9, CHAGOS ISLANDS. Dale, W4QM, is once again active as VQ9QM. His activity is mainly CW. He was heard on 80 meters between 2100 and 0000z and on 12 meters between 1330 and 1600z. Also, check 30 meters between 1800 and 2000z. His length of stay is currently not known. QSL via W4QM.

XZ1N DXPEDITION MYANMAR WRAP-UP. In a press release by Dan Brown, NA7DB, states that the members of the XZ1N-1998 DXpedition team wish to express their sincere gratitude to the DX community for their overwhelming response. In just over 3 weeks, more than 38,400 contacts were logged in Yangon, the capital city of the Union of Myanmar. The team is also grateful for the support of the government of Myanmar, H.E. Gen. Khin Nyunt, Secretary 1, and the Ministry of Hotels and Tourism, especially Mr. Htay Aung, the General Manager of Myanmar Tours & Travels. OPDX InterNet Subscribers will receive the complete press release as an additional bulletin. Non-subscribers can go to the XZ1N Web page for more details at: http://ng7m.qrq.com/~xz1n

YK, SYRIA. Omar, YK1AO, is now active on 160 meters. He has been heard on 1826 kHz around 2030z and 0315z (and later). "The 59(9) DXReport" states Omar is using 1500w into a Gladiator Vertical. When he is not active on 160 meters, check 40 meters between 0345 and 0500z. He is also active on RTTY.

ZK3, TOKELAU. As this bulletin was being prepared Ron, ZL1AMO, became active as ZK3RW. Activity seemed to start on 15 meters CW and then moved to 10 meters CW on 28495 kHz. His length of stay is unknown. QSL direct

via his CBA.

ZW/ZY, BRAZILIAN ACTIVITY.......
Look for ZY7FO to be active from Itamaraca Island (and Fort Orange), January 16-18th. Activity will be on 80-10 meters CW/SSB. Also, check the IOTA frequencies and the Brazil DX Net. Reference numbers are: DIB-018, IOTA SA-046 and DFH-01-PE. QSL Manager is PR7RT, Guelfo Jorge Poltronieri, P.O.Box 008, 58001-970 - Joao Pessoa - PB - Brasil

Look for ZW7SC to be active from Fort of Santa Catarina, January 23-25th. Activity will be on 80-10 meters CW/SSB. Also, try the Brazil DX Net. Reference number is DFH - 001-PB.

I have the ADI AT-600 and can say it is one of the best HT's I've ever owned. In addition to all the features listed, if you go to their web site you will find the owners manual on-line and the key pad modification to open up the receive. This was a real nice extra for me as our local PD is on 851 Mhz. Even does a fine job of receiving them!

As noted in other posts, the audio output does leave a little to be desired, however a speaker/mic makes all the difference. With a larger speaker, it has plenty of audio for mobile use.

Don't know Morse code spacing very well, huh Brian? If you really send one dot time pause between letters, nobody is going to understand you.

11101000 is an 'N'. The 000 is the space between characters. I deliberately put in a mistake to see if anyone would find it. The fact that someone did find it means proves that Morse code is a digital binary code.

I think everyone will agree that what I wrote was a digital binary code.
That multiple people were able to spot the "mistake" proves that Morse
code is indeed a digital binary code.

Wobulator, cor that takes me back. A Wobulator is a swept frequency oscillator. Use of such will allow the alignment of bandpass filters to be observed.

You are right, and I agree that he needed impeached, but do you really think the Senate will throw out a President with high approval ratings?? It ain't gonna happen. Popularity has pushed Principle out of the car and it just got hit with a semi. The saddest part of all of this is the compartmentalism which has permeated America.

I guess you trust the Gov't and your local police not to do anything wrong (very naive). I know I don't trust the gov't or police. Anyway we pay them so we should have the right to hear them just like your boss at work can spy on any call you make or receive at work and any email you send or receive when using your work systems.

Your type of attitude is what leads to a dictatorship instead of a Moneyocracy oops meant Democracy.

Impeach Clinton -- NEVER Trust a man who says he didn't inhale

5694. AURORA WATCH: Middle Latitude Auroral Activity Watch for 21-22 Dec

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-20 00:00:00 UTC
From: oler@solar.uleth.ca
Message-ID: <75i9lt$8le3@mars.online.uleth.ca>
Source record: 155207
Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 07:40 UTC, 20 DECEMBER

/\

ACTIVATION: 12:00 UTC ON 21 DECEMBER
VALID UNTIL: 19:00 UTC ON 23 DECEMBER

HIGH RISK PERIOD: 22 DECEMBER (UT days)
MODERATE RISK PERIOD: 21-23 DECEMBER

PREDICTED ACTIVITY INDICES: 09, 12, 25, 14 (20 DECEMBER - 23 DECEMBER)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NONE

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR TO
GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHEASTERN WASHINGTON STATE TO SOUTHERN MONTANA TO SOUTH
DAKOTA TO
SOUTHERN MINNESOTA TO WISCONSIN TO SOUTHERN MICHIGAN TO DARK SKY
SITES OF NEW YORK STATE AND SOUTHERN MAINE.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN UNITED KINGDOM TO EXTREME NORTHERN EUROPE
INCLUDING
MUCH OF NORWAY, CENTRAL TO NORTHERN SWEDEN AND CENTRAL TO
NORTHERN
FINLAND, TO NORTHERN RUSSIA. EXTREME SOUTHERN REGIONS OF NEW
ZEALAND
AND POSSIBLY EXTREME SOUTHERN REGIONS OF AUSTRALIA MAY ALSO SPOT
PERIODS OF ACTIVITY.

SYNOPSIS...

Auroral activity is expected to intensify following the anticipated
arrival of a possible obliquely impacting coronal mass ejection associated
with the major flare of 18 December and a near-full halo coronal mass

ejection from the simultaneous minor parallel ribbon flare with eruptive filament (also of 18 December). Of these two potential CMEs, the latter (associated with the filament eruption) has the highest probability of arrival. Impact is currently expected anytime after 12:00 UTC on 21 December. We are leaning more toward an impact time very early in the UTC day of 22 December, but anytime after the mid-UTC day of 21 December is fair game. The impact likely will not be very significant and we presently don't expect the orientation of fields in the disturbance(s) to be highly conducive to producing auroral storming. Nevertheless, we will monitor conditions closely. The main phase of the activity will likely take place during the UTC day of 22 December which will be followed by the recovery phase on 23 December.

PLEASE SUBMIT ANY OBSERVATIONS YOU MAKE OF AURORAL ACTIVITY TO:
http://solar.uleth.ca/solar/www/auroras.html

FOR REALTIME NOTIFICATION OF AURORAL ACTIVITY, WE RECOMMEND THE GE+LERT ALERTING SYSTEM SOFTWARE AT: http://solar.uleth.ca/solar/www/geolert.html

(ANYONE WHO PURCHASES GE+LERT DURING THE MONTH OF DECEMBER WILL AUTOMATICALLY RECEIVE ONE YEARS E-MAIL SUBSCRIPTION TO ANY OR ALL OF OUR E-MAIL PRODUCTS, INCLUDING THESE AURORAL ACTIVITY WATCHES AND WARNINGS)

** End of Watch **

I have to agree with you there; but I wonder where the media comes up with these polls on such short notice?
When I hear the president's popularity goes up by the day, in light of the utter bullshit that goes on daily in Washington, I really smell a rat. I honestly don't think american people are that stupid
or unaware of whats going on. Nonetheless, I suppose you are correct; illogic will prevail. I hope you are wrong... :-)

Uhhhh what were they questioning him about ?? The weather ??

> Do you think the president should be exempt from the laws you and I are accountable to?

Hell no , and I don't think it's Ken Starr's or his Gestapo Grand
Jury's _business_ who YOU , I or Clinton rolls in the hay with as long
as it's consensual (it was) and both parties are of age (they were)

>I don't give a damn if he's banging Mother Teresa on national TV. But now that you've mentioned it, it IS the governments business whom he had sex with, as he did while on the job IN THE OVAL OFFICE.

Dastardly deed, unwise, probably immoral, stupid, brain dead etc but
the law against it is ??? ..... Now then Sodomy (a BJ among other
acts) is illegal in some states (Not in DC) I take it you wouldn't
mind testifying some day as to whether your wife or girlfriend had
ever performed that act on you and/or you wouldn't mind your
wife/girlfriend/daughter/mother/grandmother etc testifying as to
whether she had ever performed such acts. It's the government's
business correct ???

You're right , you have a bunch of coincidences, if all of these
incidents are even correct, there is no doubt quite a bit of BS mixed
in here.

You can have the last shot .... Enjoy.

>
>
>
>Much of the evidence will never be known because many people who were witnesses or who possessed evidence of some kind suffered mysterious deaths prior to being able to come forward. The list compiled here is not complete and is not detailed. It is presented to show how extensive it is and to illustrate that all these deaths could not be just a coincidence.
>Mary Mohane ï¿½ former White House intern gunned down in a coffee shop. Nothing was taken. It was suspected that she was about to testify about sexual harassment at the White House.
>Vincent Foster ï¿½ former White House Counsel, found dead of a gunshot wound to the head and ruled a suicide. He had significant knowledge of the Clintonsï¿½ financial affairs and was a business partner (and alleged sex partner) with Hillary. If the Clintons are guilty of the crimes they are accused of by Larry, Vincent Foster would have detailed knowledge of those crimes.
>C. Victor Raiser, II ï¿½ former National Finance Co-Chairman of Clinton for President, and Montgomery Raiser, his son. Both died in a suspicious private plane crash in Alaska. No cause determined. Raiser was considered to be a major player on the Clinton team.
>Paul Tully ï¿½ DNC Political Director, was found dead in a Little Rock hotel room. No cause was ever determined and no autopsy was allowed. Tully was a key member of the damage control squad and came up with some of the Clinton strategies.
>Ed Willey ï¿½ Clinton fund raiser. Found in the woods in Virginia with a gunshot wound to the head. Ruled a suicide.
>Hershell Friday ï¿½ Clinton fund-raiser. His plane exploded.
>Jerry Parks ï¿½ former security team member for Governor Clinton. Prior to his death he had compiled and extensive file on Clintonï¿½s activities. His family had reported being followed and his home broken into just before being gunned down at a deserted intersection.
>John Wilson ï¿½ former Washington D.C. council member. Had ties to Whitewater. Died of a very suspicious hanging suicide.
>Kathy Ferguson ï¿½ former wife of Arkansas State Trooper Danny Ferguson, the co-defendant with Bill Clinton in the Paula Jones lawsuit. Found dead in her living room of a gunshot wound to the head. Ruled a suicide. Interestingly, her packed suitcases seemed to indicate she was about to go somewhere.
>Bill Shelton ï¿½ Arkansas state trooper and fiancï¿½ of Kathy Ferguson. Allegedly committed suicide by shooting himself at her grave.
>Gandy Baugh ï¿½ attorney for Dan Lasater in a financial misconduct case. Supposedly jumped out the window of a tall building to commit suicide.
>Dr. Donald Rogers ï¿½ dentist. Killed in a suspicious plane crash on his way to an interview with reporter Ambrose Evans-Pritchard to reveal information about Clinton.
>Stanley Huggins ï¿½ lawyer investigating Madison Guaranty. Suicide. His extensive report has never been released.
>Florence Martin ï¿½ Accountant for the CIA and had information on the Barry Seal case. Three gunshot wounds to the head.
>Suzane Coleman ï¿½ reportedly had an affair with Clinton. Was seven months pregnant at the time she was found dead of a gunshot wound to the back of the head, ruled suicide.
>Paula Grober Clintons interpreter for the deaf. Traveled with Clinton from 1978 until her death in 1992 in a one-car accident. There were no witnesses.
>Paul Wilcher attorney investigating corruption. He had investigated federal elections, drug and gun smuggling through Mena, the Waco incident, and had just delivered a lengthy report to Janet Reno. He died in his home of unknown causes.
>Jon Parnell Walker RTC investigator who mysteriously fell to his death from an apartment

balcony.
>Ron Brown former DNS Chairman, Commerce Secretary. Reported to have died in a plane crash, but new evidence reveals he may have been shot in the head. He was being investigated by a special investigator and was about to be indicted with 54 others. He spoke publicly of his willingness to make a deal with the prosecutors to save himself a few days before the fatal trip. He was not supposed to be on the flight but was asked to go at the last minute.
>Barbara Wise Commerce Department secretary. Worked with Ron Brown and John Huang and had extensive knowledge of their activities. Found dead in her locked office the day after Thanksgiving. It was ruled a suicide. Interestingly, she was found partially clothed, bruised, and in a pool of blood.
>Charles Meissner Assistant Secretary of Commerce. John Huang was given a special security clearance by Meissner. Shortly thereafter, he died in the crash of a small plane.
>Kevin Ives and Don Henry seventeen-year-old boys who apparently saw something related to drugs in Mena by accident late at night. Officially ruled an accidental death on the train tracks, but evidence shows they died before being placed on the tracks one of a crushed skull and the other of a knife wound in the back.
>Keith Koney had information on the Ives and Henry deaths. Died in a motorcycle accident with reports of a high-speed car chased involved.
>Keith McKaskle had information on the Ives and Henry deaths. Stabbed to death.
>Gregory Collins had information on the Ives and Henry deaths. Gunshot wound to the head.
>Jeff Rhodes had information on the Ives and Henry and McKaskle deaths. Tortured, mutilated, shot, body burned in a dumpster.
>James Milam had information on the Ives and Henry deaths. He was decapitated. The coroner ruled death due to natural causes.
>Jordan Kettleson had information on the Ives and Henry deaths. Found shot in the front seat of his pick up truck.
>Dr. Stanley Heard Chair, National Chiropractic Health Care Advisory Committee. He personally treated Clintons mother, stepfather, and brother. His personal small plane developed problems so he rented another. Fire broke out in flight and he crashed.
>Steve Dickson attorney for Heard. Died in same plane crash.
>John Hillier video journalist and investigator. He helped to produce the documentaries Circle of Power, and The Clinton Chronicles. He mysteriously died in a dentists chair for no apparent reason.
>Maj. Gen. William Robertson, Col. William Densberger, Col. Robert Kelly, Spec. Gary Rhodes, Steve Willis, Robert Williams, Conway LeBleu, Todd McKeehan, Sgt. Brian Haney, Sgt. Tim Sabel, Maj. William Barkley, Capt. Scott Reynolds all former Clinton bodyguards who are dead.
>Gary Johnson former attorney for Larry Nichols, severely beaten and left for dead.
>Dennis Patrick had millions of dollars laundered through his account at Lasater & Co. without his knowledge. There have been several attempts on his life, all unsuccessful.
>L.J. Davis reporter. Wile investigating the Clinton scandals he was attacked in his hotel room and his notes were taken. He survived.
>Larry Nichols former marketing director of ADFA. Responsible for bringing forth more evidence and witnesses on Clinton corruption than any other source. Very public about his claims against Clinton. He has suffered six beatings, arrest on trumped up charges, and a near arrest.
>- Credit Larry Nichols -

Those approval ratings will start to drop now that the House has impeached him and people realize he is becoming more of a liability to the country than an asset. Polls show a majority of people want him to resign, rather than go through a lengthy and embarrassing Senate trial.

From: larya@home.com
Message-ID: <75im9jqse1@nnrp1.dejanews.com>
Source record: 155214

Greetings, and merry christmas I have been helping to man amateur radio display stations since the late 60's and have been asked that same question. I don't think there is a simple answer. It really depends on what you want to get out of personal radio use. Amateur radio offers a deversity of radio frequency mode and band use. It offers an atmosphere where the users are proud of what they have accoplished. Unfortunately, because the entrance requirement is somewhat more strick that a cb licence, you have to contribute a lot before you can get anything in return. If you are honestly interested in learning about radio's and the varioius modes and bands get your amateur radio licence. After you get your first licence, study and obtain the endorsement for your hf cw priveledges. Use cw for a lest a year before decideing whether you want to continue using it. CW does have its advantages. Larry ve3fxq

Based on your comment above you reached your biggest fear.

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. See Hillary do something naked.
3. A blond naked chic being held by a female ham!.
4. Take the Burt Poll, about Clinton ham spouses, girlfriends
5. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
6. Burt's opinion on the First Affair in the White House with a picture of the
new first couple.
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. A test for your SVGA monitor
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics

Know code = Know ham. Show teenagers that they need to study and
take exams in order to become a ham. don't forget to tell them that
they need to know morse code... know code = know ham. Tell them
that many chatting on ham freqs are jerks nearly the age of 60-80s.

...NO WONDER WHY TEENAGERS ARE NOT INTERESTED.

1. I do not work for a Fortune 500 company, rather a small company with under 30 employees. I do have health insurance. We are not rich nor is my employer making much if any money.

2. When Clinton takes it to the next level and "wags the dog" with Russia, you'll need that health care that Mr. Clinton touts...for your radiation sickness. Extreme? Hmmm...who would have thought he's have the intestinal fortitude to bomb Iraq at such a questionable time (verified by a cease-fire not one hour after being impeached by the Congress), and now the Russians have recalled their ambassador - something not done lightly in international relations. What's the next distraction?

3. Again, sex has nothing to do with it. Lying and obstruction of justice have everything to do with it. The sex part was simply disgusting, but not illegal except for the security breach and sexual harrassment (yes, even if consentual - she was a subordinate). If he was a Republican, would you feel differently?

4. If she was 20 and not 23 when this all happened, and he got nailed for pedophelia (legal age of consent is 21 in D.C.), would you feel differently?

No reply is needed. Bless you all during this holiday season and again, please pray for our democracy...and some better HF propagation!

Todd, N2XL

5712. Yaesu FT-50 Antenna Upgrade

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-20 00:00:00 UTC
From: jcsarp@aol.com
Message-ID: <19981220093345.21834.00001100@ng105.aol.com>
Source record: 155225

After owning and comparing many different multi-band SMA antennas on my Yaesu FT-50, I prefer the performance, style, size, and price of the MFJ-1716S. That's right .... the MFJ. I've compared it to the Comet SMA-503, Comet SMA-3, Diamond SRH-519, Pryme RD-9 SMA, Premier RD-98 SMA, and the stock Yaesu antenna. It performed as well as (or better than) the other antennas on the following bands.

2 meters
70 cm
VHF Business Band
UHF Business Band
FRS
Cellular
900 MHz cordless

The antenna comes with a rather ugly sticker at the base that identifies it as a MFJ-1716S. It is easily removed giving the antenna a clean slick look. At $16.95 each you can't beat it. Check it out.

John

Source record: 155227

Model HD1418 Active Audio Filter -- dates from 1988.

Assembled solid-state unit in mint condition. Attractive design. Has bandwidth settings for CW, SSB, and RTTY. The CW filter includes a tunable notch/peak filter with variable BW. The unit also has high and lowcut capabilities to get rid of "rumble" and "hiss". It has its own audio amplifier.

Very dark brown metal with red and white lettering--no plastic! Coordinates with the Heathkit rigs of the era. In perfect cosmetic condition. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers shortly after I assembled it. You get the manual with it.

Asking $100

5716. Auto-FAQ Sent to Over 12,500 rec.radio.amateur.misc Posters

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-20 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <IL8f2.4256$_k.484128@newscene.newscene.com>
Source record: 155229

In September of 1996, I started mailing an introductory message to all posters to rec.radio.amateur.misc. This is accomplished via a special Perl script originally written by comp.infosystems.www.* FAQ maintainer Tom Boutell, who uses it on comp.infosystems.www.authoring.html, to send each poster such a letter once, and only once. It runs from a Unix cron job on my host every morning at 2 AM and queries my local news server via NNTP for the headers of any new articles posted to this newsgroup. About 15-25 new posters on average receive the message each day.

Here's a breakdown of recipient's reactions to the letter over the last 27 months. All feedback was politely replied to, usually with a version of the rebuttal arguments given below:

About half of one percent of all recipients strongly objected to it (spamming and junk mail seems to have rubbed sensibilities raw with regard to receiving unsolicited, possibly automatically-sent, E-mail; also, there's obviously just no pleasing some people, including the one person who angrily replied that he did not ask to be welcomed to this newsgroup (sigh!); however, experiences in other newsgroups demonstrate such automated welcome messages to be "just barely redeeming" in terms of dealing with the massive influx of new users)

Another half of one percent thought it was a bit wordy (the message needs to be "one size fits all" and some recipients might be very confused without some background explanation; the message attempts to get to the point as quickly as possible, and some careful pruning and rewording of the message has helped reduce complaints, but pragmatically the message is also optimized to minimize the amount of followup correspondence I have to engage in)

A handful of people complained that they did not post to the newsgroup (they did, usually by following up to a crossposted article in another newsgroup). In this case, the message was at least useful to warn users about such unintended crossposting.

A handful of people didn't read the entire message, or didn't understand it, and asked to be taken off the mailing list (of course, this isn't a mailing list, and removing their address from my database would have the opposite of the desired effect). One person even asked to be removed from the database anyway, stating that he never intended to post to the newsgroup again (I honored his unusual request).

About one percent complimented me for sending it (which I appreciate).

The overwhelming majority did not respond, indicating one of several possibilities:

- they approve of it
- they disapprove, but not enough to bother replying
- the mail was misdelivered (I got a few bounces, often from deliberately munged From: or Reply-To: addresses to ward off "spam"; I've also recently begun to notice a number of readers registering with blocking or filtering services provided by DejaNews and others that prevent them from receiving reply E-mail)
- they don't care

So, my impression is that the project is at least a qualified success, and should continue in its present form. At the very least, it seems to be substantially non-controversial. Having primed the previous-poster database with over 12,500 E-mail addresses, the chances of bothering an experienced reader with an unneeded introductory message is greatly reduced, and will get even smaller with time.

I'd be interested in hearing your opinions on this project. I'd also like to solicit volunteers to initiate similar projects in some of the special-topic newsgroups (perhaps starting with my previous-poster database as a baseline, and modifying the message to contain pointers to the more topic-specific FAQ's and information; the .digital.misc, .homebrew, .equipment, and .policy newsgroups seem to be good candidates for a project of this type).

For those who are curious, here is the current version of the message, slightly modified in response to feedback as the project progressed.

Subject: WELCOME to rec.radio.amateur.misc
X-Loop: pschleck@oasis.novia.net

Hello,

This E-mail message is automatically sent to every new poster or cross-poster (as of September 21, 1996) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). It should be sent once, and only once, to each unique E-mail address. As the subject says, this is a welcome message. The Internet amateur radio community welcomes you to the newsgroups, including rec.radio.amateur.misc, and welcomes your input, opinions, and constructive participation. To help make you feel welcome, experienced participants like myself have chosen to systematically inform you, as a new poster, about useful information resources and user tips to help you get the most out of these newsgroups. I hope that you will consider this message in that spirit.

Please note that this is a one-time mailing, not a mailing list, and the presence of your E-mail address in my database prevents you from getting the message again the next time you post. Because of this, a request to "take me off of your mailing list" would not only not make sense, removing your address from my database would actually have the opposite of the desired effect (where you would be considered a first-time poster the next time you posted, and get the message again).

* * *

1. The news.announce.newusers newsgroup, moderated by Mark Moraes, contains a number of very informative articles providing an overview of net-etiquette, suggested writing styles for electronic forums, and other various do's and don'ts concerning Internet culture. If the articles have expired at your site, you may also view them via your World-Wide Web (WWW) browser (such as Netscape, Mosaic, Lynx, or Internet Explorer) at:

ftp://rtfm.mit.edu/pub/usenet/news.answers/news/

2. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed as a WWW Page:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to john@wd1v.mv.com.

3. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

4. The Guide to the Personal Radio Newsgroups, written by Jay Maynard, K5ZC, provides an excellent overview to all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

5. A Guide to Buying and Selling on Usenet, also written by Jay Maynard, contains a number of good pointers for reading and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which, with the sole exception of rec.radio.amateur.boatanchors for vintage equipment, is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jmaynard@nwpros.com.

6. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

7. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.dejanews.com/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

8. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question. Note that it is (almost without exception) inappropriate to post your article to all (or even a significant subset of) rec.radio.amateur.* newsgroups. Please pick only the most relevant newsgroups (usually no more than 2 or 3), and post your article as a simultaneous cross-post (check your newsreader documentation) so that only one article is propagated, and the article is only shown once in a newsreader.

9. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

(Text of article adopted from Tom Boutell, World Wide Web FAQ Maintainer, with modifications.)

5720. K6FU Calls the FCC -- A Transcript

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-20 00:00:00 UTC
From: "Me." <Me@you.com>
Message-ID: <367D2B14.2C5A@you.com>
Source record: 155233

From the official transcript of the telephone
conversation between K6FU and the FCC:

FCC: "Thank you for calling, Mr. Marshall."

Greg: "Marshall? Marshall? You mean federal?
You're a federal marshall?"

FCC: "No, no... we need to talk about these
interference complaints against you."

Greg: "Complaints? Against ME? Someone
complained because they're against ME?
Sometimes my dog is against me. My clothes
are against me. My dog isn't complaining!
My clothes aren't on a federal marshall!"

FCC: "No, wait..., "

Greg: "Wait? WAIT? You want to WAIT? But the Earth!
The Earth can't wait! We've got to heal the
earth and the sky...
You want to WAIT to fly in the sky??"

FCC: "Ummm... Mr. Marshall, you don't understand the
gravity of these complaints..."

Greg: "Gravity?? GRAVITY? You want WEIGHT?
I don't understand WEIGHT in the sky??
Look at YOU! Look at YOU! You don't
respect the Earth! The Earth....
You want to send a marshall to arrest the Earth??"

FCC: "I can see we're not getting anywhere, Mr. Marshall.
We'll be by to do a station inspection in the
near future.."

Greg: "But you missed the point! The POINT!
Point in the sky! Fly your marshall's weight
over the Earth! Point? POINT?? LOOK AT YOU!"

FCC: "Good bye, Mr. Marshall?

Greg: "Bye? Buy? You want to buy something?
You want to buy...."

```
FCC: "(click)"

Hi!

I'm looking for the LCD Display assembly (part# B38-0716-05)
for this radio at a REASONABLE price.
If you have it,know where i can get it or who is actualy manufacturing
it, you can contact me via e-mail
harvey@francomedia.qc.ca

Thanks...

Hello Friends,

I am looking for a copy of Operating Manual for Yaesu FAS-1-4R,
Remote Antenna Selector.
I'll pay for the cost of copying and postage.
Or just give me the description of 4-pin connector.

Thanks for reading. 73 Robin

I don't think you will have much luck trying to heat sink the bulb. i am
assuming it is made of glass or quartz. Trying to cool the bulb in this
fashion would place too much stress on it and probably would develop
cracks in no time at all. I think you would be better off placing your
efforts into developing a air cooling system. Afterall look how they do
it with movie and overhead projectors.

5732. Re: Inverter @ Ham Radios

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-20 00:00:00 UTC
From: Paul <pjktg@itis.com>
Message-ID: <75jh73$2s2$1@news.itis.com>
Source record: 155245
Cross-posted to: alt.energy.homepower,alt.solar.photovoltaic,rec.radio.amateur.equipment,rec.radio.amateur.misc

The radio requires max 295 watts in transmit. 32 watts in receive with the heaters off. In ssb the average should be around 150 to 200 watt draw. The inverter has an 800 watt surge rating.
I dont think its like a pump motor where there is a large draw at startup.
Is this right?

Homebrew Paradise - everything you always wanted to know about radio
homebrew (and distillation)

Yep, it has been a long time time since I posted an update, mainly because I have been quite busy these days. With up to 400 visitors A DAY you can imaging the amount of E-mail I am getting! One day I will post some of it. I have had a few laughs. For example " ... and can you design, build and send me the PCB foil pattern and schematics for a stolen suitcase alarm?".

A few months ago my wife bought me a digital camera so I am now able to illustrated the hundreds of constructional projects on the homepage. The latest is an all CMOS 4000 series (3 chip) frequency synthesiser which can cover about 6Hz to 4MHz. There is also a 0.75uV PD sensitivity FM band receiver and even technical data on the ZN414 and ZN416 ICs (in PDF format). The URL? Sorry! There are three:

http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo
http://www.geocities.com/SiliconValley/3569/

I hope shortly to introduce a kit of parts for the TDA7000 receiver (no coils required) as well as to be able to supply a PCB artwork ready for making the PCB, in exactly the same way as the FM Wireless Microphone project. I'm working on it.

Will post another update when the next few projects are added.

Best regards Harry, SM0VPO

Just because he wants a ham-radio oriented newsgroup to discuss ham
radio and not get involved in political bickering doesn't make him a
"Netcop". I agree with him... heated political discussion doesn't
belong here. There are plenty of newsgroups are oriented around such
political discussion and this shouldn't be one of them. At least IMHO.

Thus digital machines have trouble deciphering the digital morse code. Why?
I realize that morse code has a bit of an image problem right now, but saying
that it is digital doesn't make it so.

How can you lie about something that's none of the governments
business?? Or maybe you think it's the governments business whom you
have had _consensual_ sex with ??

Heil Herr Reichsmarshal Starr !!

I have been able to look up call signs by using lookup@qrz.com for several
years now.
I tried it just now and it bounced.

Any help out there?

Source record: 155291

I know this is the wrong newsgroup (I read the thread), but hear me out, it's my one shot:

Do you recall, I think it was 1983, a certain native American (Indian) who was a Marine staff sgt., who happened to be a part of the United State embassy security team, which happened to be located in the former Soviet Union? Do you remember that he was boffing a really good looking Russian chic, who just happened to be KGB? Do you recall that he was lead away from the embassy in handcuffs, brought to the United States for trial, and promptly convicted on espionage charges? Do you recall him saying that he had no idea that the woman was KGB, or that he was actually providing classified information to the Sovs about the security of the embassy? Do you remember any of this? Was it all about sex?

Have you ever worked on a government project which required you to undergo an extensive background check? Do you know why they want to know if you're boffing Mary Jo Rottencrotch? Is it because the FBI special agents (the poor guys who have to do all the background checks) are all a bunch of perverted sex maniacs? No, sir, they are not. They are preserving the security of the United States of America. As a person who has a personal liability, you are subject to the possibility of blackmail. Why would you be blackmailed? Because you have access to something special, something that requires trust to hold and maintain.

Sir, sex itself has nothing to do with it. The ability to be blackmailed (which resulted in the perjury count Mr. Clinton was formally charged with today) is a dangerous matter, especially to someone who holds the highest office in the land, the hemisphere - the world. That same man - who sodomized an intern (consentually) and then lied about it - also holds the keys to America's nuclear arsenal.

Sir, this same man - prior to him holding the office of POTUS in 1992 - was ineligible to receive even a confidential security clearance due to his past and present escapades. This same man managed to find his way into the Oval Office. When he placed his hand on the bible and pledged to uphold and defend the Constitution of the United States, he accepted the requirements of office. He has abused this priviledge. This same man placed his hand on a bible and pledged to tell the truth to our courts of law - and then perjured himself. Has he also lost our integrity as a nation as well? Is this the same man you are defending in your earlier messages?

Glod Bless America, sir, and may you find a way to sleep tonight.

Todd, N2XL

Yep, they're so full of features that 6 months after programming one for use on local repeaters, it's doubtful many can remember how to program them again without the owner's manual and a lot of headscratching LOL! If I'm asked to program in new PLs, offsets, and other repeater-stuff on either my ICOM or Standard 2m/440 gear, I have to go to the manual most of the time if I haven't done it recently. Sheesh, once in a while I sure miss some of the older but far simpler equipment!

Tom, I said it's unfortunate that they don't get into the equipment and theory as much, not particular ham activities as you thought I was talking about. My point was they are not usually 'into' the theory and equipment as much so they end up being, as a Russian ham I spoke to described American hams, appliance operators that are often clueless as to how their equipment actually works.

5764. NEW FCC & OSHA RULES

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-20 00:00:00 UTC
From: tracomm@aol.com
Message-ID: <19981219235732.23457.00001629@ng133.aol.com>
Source record: 155299

Although they do not apply to amateurs for awhile yet, many of the hams here are also in the "commercial" end of the business where the new FCC & OSHA MPE Rules are now in effect.
Curious how other people in the business are addessing the issue with their bosses, customers, co-workers and themselves.
Text of the FCC MPE notice is on our website, under the RADMAN personal monitor section..

Source record: 155300

Kinkster Says:
>The _truth_ is it's none of the governments nor Ken (Nazi) Starr's
>business whom one has of age _consensual_ sex with.

Apparently you missed what I said: The impeachment had NOTHING to do with sex. It had EVERYTHING to do with PURGERY. Do you think the president should be exempt from the laws you and I are accountable to?
I don't give a damn if he's banging Mother Teresa on national TV. But now that you've mentioned it, it IS the governments business whom he had sex with, as he did while on the job IN THE OVAL OFFICE.
What do you suppose your boss would do if you were caught hosing the secretary on the company premisis?

>Your proof that he has _any_ involvement in anyones death would be ??

No, I don't have any proof. But then again, I don't recall stating that I did.

Much of the evidence will never be known because many people who were witnesses or who possessed evidence of some kind suffered mysterious deaths prior to being able to come forward. The list compiled here is not complete and is not detailed. It is presented to show how extensive it is and to illustrate that all these deaths could not be just a coincidence.
Mary Mohane &#65533; former White House intern gunned down in a coffee shop. Nothing was taken. It was suspected that she was about to testify about sexual harassment at the White House.
Vincent Foster &#65533; former White House Counsel, found dead of a gunshot wound to the head and ruled a suicide. He had significant knowledge of the Clintons&#65533; financial affairs and was a business partner (and alleged sex partner) with Hillary. If the Clintons are guilty of the crimes they are accused of by Larry, Vincent Foster would have detailed knowledge of those crimes.
C. Victor Raiser, II &#65533; former National Finance Co-Chairman of Clinton for President, and Montgomery Raiser, his son. Both died in a suspicious private plane crash in Alaska. No cause determined. Raiser was considered to be a major player on the Clinton team.
Paul Tully &#65533; DNC Political Director, was found dead in a Little Rock hotel room. No cause was ever determined and no autopsy was allowed. Tully was a key member of the damage control squad and came up with some of the Clinton strategies.
Ed Willey &#65533; Clinton fund raiser. Found in the woods in Virginia with a gunshot wound to the head. Ruled a suicide.
Hershell Friday &#65533; Clinton fund-raiser. His plane exploded.
Jerry Parks &#65533; former security team member for Governor Clinton. Prior to his death he had compiled and extensive file on Clinton&#65533;s activities. His family had reported being followed and his home broken into just before being gunned down at a deserted intersection.
John Wilson &#65533; former Washington D.C. council member. Had ties to Whitewater. Died of a very suspicious hanging suicide.
Kathy Ferguson &#65533; former wife of Arkansas State Trooper Danny Ferguson, the co-defendant with Bill Clinton in the Paula Jones lawsuit. Found dead in her living room of a gunshot wound to the head. Ruled a suicide. Interestingly, her packed suitcases seemed to indicate she was about to go somewhere.
Bill Shelton &#65533; Arkansas state trooper and fianc&#65533; of Kathy Ferguson. Allegedly committed suicide by shooting himself at her grave.

Gandy Baugh • attorney for Dan Lasater in a financial misconduct case. Supposedly jumped out the window of a tall building to commit suicide.
Dr. Donald Rogers • dentist. Killed in a suspicious plane crash on his way to an interview with reporter Ambrose Evans-Pritchard to reveal information about Clinton.
Stanley Huggins • lawyer investigating Madison Guaranty. Suicide. His extensive report has never been released.
Florence Martin • Accountant for the CIA and had information on the Barry Seal case. Three gunshot wounds to the head.
Suzane Coleman • reportedly had an affair with Clinton. Was seven months pregnant at the time she was found dead of a gunshot wound to the back of the head, ruled suicide.
Paula Grober Clintons interpreter for the deaf. Traveled with Clinton from 1978 until her death in 1992 in a one-car accident. There were no witnesses.
Paul Wilcher attorney investigating corruption. He had investigated federal elections, drug and gun smuggling through Mena, the Waco incident, and had just delivered a lengthy report to Janet Reno. He died in his home of unknown causes.
Jon Parnell Walker RTC investigator who mysteriously fell to his death from an apartment balcony.
Ron Brown former DNS Chairman, Commerce Secretary. Reported to have died in a plane crash, but new evidence reveals he may have been shot in the head. He was being investigated by a special investigator and was about to be indicted with 54 others. He spoke publicly of his willingness to make a deal with the prosecutors to save himself a few days before the fatal trip. He was not supposed to be on the flight but was asked to go at the last minute.
Barbara Wise Commerce Department secretary. Worked with Ron Brown and John Huang and had extensive knowledge of their activities. Found dead in her locked office the day after Thanksgiving. It was ruled a suicide. Interestingly, she was found partially clothed, bruised, and in a pool of blood.
Charles Meissner Assistant Secretary of Commerce. John Huang was given a special security clearance by Meissner. Shortly thereafter, he died in the crash of a small plane.
Kevin Ives and Don Henry seventeen-year-old boys who apparently saw something related to drugs in Mena by accident late at night. Officially ruled an accidental death on the train tracks, but evidence shows they died before being placed on the tracks one of a crushed skull and the other of a knife wound in the back.
Keith Koney had information on the Ives and Henry deaths. Died in a motorcycle accident with reports of a high-speed car chased involved.
Keith McKaskle had information on the Ives and Henry deaths. Stabbed to death.
Gregory Collins had information on the Ives and Henry deaths. Gunshot wound to the head.
Jeff Rhodes had information on the Ives and Henry and McKaskle deaths. Tortured, mutilated, shot, body burned in a dumpster.
James Milam had information on the Ives and Henry deaths. He was decapitated. The coroner ruled death due to natural causes.
Jordan Kettleson had information on the Ives and Henry deaths. Found shot in the front seat of his pick up truck.
Dr. Stanley Heard Chair, National Chiropractic Health Care Advisory Committee. He personally treated Clintons mother, stepfather, and brother. His personal small plane developed problems so he rented another. Fire broke out in flight and he crashed.
Steve Dickson attorney for Heard. Died in same plane crash.
John Hillier video journalist and investigator. He helped to produce the documentaries Circle of Power, and The Clinton Chronicles. He mysteriously died in a dentists chair for no apparent reason.
Maj. Gen. William Robertson, Col. William Densberger, Col. Robert Kelly, Spec. Gary Rhodes, Steve Willis, Robert Williams, Conway LeBleu, Todd McKeehan, Sgt. Brian Haney, Sgt. Tim Sabel, Maj. William Barkley, Capt. Scott Reynolds all former Clinton bodyguards who are dead.
Gary Johnson former attorney for Larry Nichols, severely beaten and left for dead.
Dennis Patrick had millions of dollars laundered through his account at Lasater & Co. without his knowledge. There have been several attempts on his life, all unsuccessful.
L.J. Davis reporter. Wile investigating the Clinton scandals he was attacked in his hotel room and his notes were taken.

He survived.
Larry Nichols former marketing director of ADFA. Responsible for bringing forth more evidence and witnesses on Clinton corruption than any other source. Very public about his claims against Clinton. He has suffered six beatings, arrest on trumped up charges, and a near arrest.
- Credit Larry Nichols -

My 520SE had a transformer input at 120 (or optional volts) but no 12 volt in (E meant Economy!)

there is enough impeadance in that to protect the rig.

The transformer was meant to run on 50hz in europe, hence it is over impeadenced for protection at 60 hz.

SEVERAL are advertised in QST, and I did a
web search a few weeks ago and found
a site that specializes in SB for Ham radio.

don't recall the URL but you can search for it.

I don't know the power output of your radio but even so, a 500 watt
inverter is a pretty small inverter and likely will not provide
sufficient current for any length of time when you transmit.

I would rather go before the VE team, throw myself on the floor, and speak in "tongues." It is digital, after all. You just have to listen real close to hear it.

Well, I always thought that having an error in something meant you were wrong.
Anyway, your stream looks kinda funny having a 54 digit word length. I think
the Sperry's had 36 and the IBM's had 32.

Why dont you tell that to the guy about 2 miles up the road from me who had the FCC march out of his front door last month with all of his equipment and they served him with a restraining order prohibiting him from transmitting on any amateur radio until his hearing with the FCC licensing board in February. This gentleman thought is was cool to play music during a local net on Saturday nights.

Perhaps your former commissioner friend has been spending too much time with Reagan during one of his Alzheimer's spells.

Hello Hugh,

I too studied for the 5 wpm test way back when and I luckily clocked in at 13 wpm the day I took my exam. I wouldn't concentrate on anything more than the 5 wpm because you may find it to be a stumbling block. Learn the 5 wpm efficiently and you might just find yourself at 13 wpm just like I did. I found code boring in 1977 and I still find it boring. Ive found one either loves it or hates it.

Ed ... the point is that many are unwilling to serve as the "serfs" to
the "royalty of the HF bands." They are tired of "royalty's" proclaimation
"let them eat VHF."

Ed ... it is true that YOU have never, to my knowledge, called them
2nd class citizens ... however, to be honest, you would, I believe,
have to agree that many of your fast-coded brethern (particularly
those with a zealous PCTA attitude, like Larry Roll, Dick Carroll,
MD, and more) DO consider them to be, and treat them as, 2nd
class citizens.

I never said that YOU felt that way or called them that ... and I
certainly don't think they should be called that or treated like
that ... I just have pointed out that they ARE called that and
treated like that by many and that that is unjust. (note the
"(falsely considered)" qualifier in my comments quoted above.)

5787. Flaky display on Kenwood TH-79A

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-21 00:00:00 UTC
From: walkd@mail.humanities.ccny.cuny.edu
Message-ID: <367e76c1.292536@News.cuny.edu>
Source record: 155073

I have a Kenwood TH-79A with a display that simply won't behave. On start-up, the radio displays all sorts of weird characters on the screen which makes it impossible to tell what frequency or band is in use. Does anyone have an idea where I can have it repaired and what it might cost?
I'm considering an attempt to secure a damaged or non-transmitting unit for use as parts. Are there any other considerations to take into account?
Thanks all.

> to pull this off?

No problem. You know the difference between bytes, words, double-words, etc.
I'll just define a data type that will handle the maximum number of bits
required. Actually, each dot time will be sampled eight times and some
bit stream processing used on the raw data to get it down to the dot = '1'
format. Ideally a dot would look like 000000001111111100000000 with space
on each side but noise might make it look like 000100011111111110001000
Software will recognize that as 010 or a single dot. With fixed dot widths,
I think I can use DSP techniques to copy CW better than I can.

Well, that's 3 times I've read you say that, are you sure?
Is this supposed to be some kind of big deal? Many 2meter
repeater owners were doing this with diode matrix IDers long
ago.

This does NOT prove that Morse code is a binary code--only
that it CAN be coded in binary. All your binary coding does
is to set the character lengths and spacing. The
intelligence is still is encoded in Morse code.
English can also be encoded in binary, as can music, as in
CD.

If you call it OOK, that implies two states, one state is on, the other state is off... that is binary (taken from TWO states - BINARY). Also if you consider CW continuous wave... either you have the continuous wave or you don't have the continuous wave!!! Again, BINARY so what does it really mean? Morse Code is an encoding scheme (lookup table) which is used to decypher letters and symbols from the BINARY (on/off) presented by the continuous wave (CW) signal!

The little dots on the music CD are analogous to CW the data extracted off of the music CD is analogous to Morse code (the encoding scheme). That data is then used to rebulid the waveform which allows us to hear the music and that's analogous to you writing down the received QSO so it could be read (in human readable form).

...NO WONDER WHY TEENAGERS ARE NOT INTERESTED.

Maybe that's a regional difference. In Sonoma Co. (Calif.) we have several who routinely check into the Chicken Net (http://chicken.net) and one has been the substitute net control lately when one of the regulars can't take the net on their usual night. And for many months, just about half of the regular net control operators were YL's! [*sigh*, and if you can call someone of retirement age a YL... A few things are getting pretty dated... nevermind the term XYL (*arrrrg*)!] Oh, yeah, and the YL no longer on these days is now a microwave tech for Pacific Bell out of Eureka.

By contrast, only a few percent of the operators on AO-27 (as received in California) are YLs and they're rarely on. And youngsters are almost as unusual (so far).

And there are lots of people out there, especially in their 30's and 40's, who don't know that CW is no longer mandatory at VHF and above, and could be interested if they knew. So it's more than just teenagers that could use some outreach.

5807. New FCC action all a farce!

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-21 00:00:00 UTC
From: tick_boy@my-dejanews.com
Message-ID: <75li89$21f$1@nnrp1.dejanews.com>
Source record: 155122

I just got done talking with a former commissioner during the Reagan/Bush years. He tells me this whole campaign by the FCC to threaten renewed enforcement is a HUGE farce. Here's why:

Several years back, several hams got "popped" by the FCC. By that time, the bands had already deteriorated. So the people who got "popped" decided to fight the charges and demand to know why they were busted, yet so-and-so wasn't.

When this happened, the U.S. attoney's and judges had a shit fit! How dare these little FCC peons invade our court system with these worthless "radio crimes"! The federal courts were meant for bigger fish....like drug king-pins and terroists! So the FCC was warned to "stay out!"

So the only way to keep them out was to NOT issue ANY NAL's....OR....to strip anyone of their license....since this might "upset" the license holder who may then take up the issue in federal court!

So you see, my friends....just as I thought! This is nothing more than a big, bad PR campaign by the FCC who hopes to stop your bad behavior with a letter and a phone call. And if they can't "scare" you....that's it!

SHAME on the ARRL for being a willing participant in this farce!

Tom Bailey

I'll give this a try. The manual is available on the Cushcraft webpage,
that is where I originally got it.

From the top of the Matchbox unit to the bottom of TV1(10/12m) 123"
From top of mast mount for TV1 to bottom mast mount of TV2 (15m) 10 5/8"
From top of mast mount for TV2 to bottom mast mount of TV3 (17m) 6"
From top of mast mount for TV3 to bottom mast mount of TV4 (20m) 16"
From top of mast mount for TV4 to bottom mast mount of TV5 (30m) 16"
Tip adjustment (40m) CW 28"
Center 22"
Phone 17 1/8"
Hope this helps. 73 de N3WJA

> > ham radio a better class of people than the people on Channel 19 etc.

Nope. I have used CB and ham for years and have found about the same number of good and bad people in both services. On AM CB, you can pretty much talk normally like you would in person. When you go to sideband, they use Q-codes and act in a more "professional" manner than they do on AM. Sideband sounds the most like HF ham freqs.

> > Someone told me the people are alot more intelligent Also how hard is the
> > tech exam does it really take alot of studying
> > Many thanks either e mail responses or post to board

I wish I could say that hams are "more intelligent", but unfortunately I can't. When I was really into CB a few years ago I never heard of the same atrocities being committed against other CB'ers that I have seen happen to other hams. I have heard of hams getting their tires slashed over something as petty as a differing opinion. There are also hams who will drive around and look for your vehicle if you don't put your residence address on your license application. There seems to be an obsession with knowing where hams live around here. I really don't think that my address is anybody's business, and if I choose to keep it private, that is my right. I never heard of this happening in CB. If you do get your license, make sure to get a P.O. box so the no-lifers won't know where you live. Trust me, you don't have to be a jammer or a criminal to attract their attention. All you have to do is have an opinion different than theirs. It doesn't matter if you're a Tech or an Extra, these people are equal opportunity haters. As a result, the amount of traffic on 2 meter repeaters around here has dropped drastically. There are also a lot of hams out there who are technological Neanderthals and don't even know how to program their radios or a scanner, much less repair them. I even heard a ham on a talk-in freq. for a hamswap ask somebody "What's a PL?". Sheesh, that's something you're supposed to know about when you take your Tech test, so I wonder how he got his license. Use ham for emergencies and public service work, but if you want secure, jammer-free communications get a digital cellular phone. Sorry to sound so cynical, but that's the way it is in a lot of places. As for the test, both the questions and answers are printed in all the study guides, so it doesn't take long to study for the test. The Tech test is easy enough to study for without memorizing answers, but I had to memorize one or two math-type questions for my General. Advanced is a lot harder, so if I cared enough about upgrading to study for it, it would take a while because there is a bit of advanced math in there. Good luck with your test if you choose to go for it.

You are confused about what "binary" means. English and music cannot be encoded in binary without an analog to digital *conversion*. Morse code can be encoded *DIRECTLY* in binary without no analog to digital conversion required. If Mr. Morse had been familiar with Mr. Boole's work, he could have defined his code directly in binary.

Binary means two states with fixed bit widths. OOK is two states. Morse has fixed bit widths, one mark for dot, three marks for dash, one space for intra-character spacing, and three spaces for inter-character spacing.

I'm working on machine encoded/decoded CW using either 100mS or 50mS as the bit timing. Knowing the transmitted bit width just about levels the playing field between man and machine.

5815. ?? Baloon antenna ??

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-21 00:00:00 UTC
From: Harry Lythall <no.one@no.where>
Message-ID: <01be2cef$d5b530e0$d334d693@e0060b0eb282a>
Source record: 155130

Hi everyone,

Do we have any Lawyers, Solicitors or Advokats out there? I know that people have hooked wireless transmitter antenna to a baloons and kites, but what happens legally? Could it be that there are international restriction and / or regulations that apply? If so, what are they? For example:

1. I live more than 15Km away from Arlanda airport, but aircraft fly over the elevated area so close that you could almost read the brand name on the tyres. Surely there must be some sort of regulation restricting the use of Hot Air / Helium / Hydrogen baloons, even if I do live so far away from the airport?

2. What would happen (theoretically) if I wanted to put a cheap throw-away QRP UHF repeater on a Hydrogen baloon to make direct contact with a friend in Germany (forgeting the legal radio aspect for a moment)? I suppose that weather baloons would come into the same category. Would one have to file a flight plan with the aviation authority? If so, would one have to know when and where the baloon would eventually come down?

I have read somewhere that model rockets may be loosed off into the heavens willy-nilly, providing that they are lighter than a large bird (an aircraft engine is supposed to be able to ingest a large bird without damage) and that the UK regulation does not specify exactly how large a "large bird" should be (Would one be legally liable if one shot down a TriStar with a model rocket?) so would my baloon have to be lighter than a standard "large bird"?.

Best regards from Harry

http://hem2.passagen.se/sm0vpo

PS
I recently heard a story of an aircraft technician at RR in the UK who was asked to perform the big-bird-in-the-engine-intake test and was instructed to use a chicken from Tesco. Unfortunately chucked a frozen chicken into the intake!

Too bad they can't learn to keep their slimy hands off other people's tires
and coax too!

> I'm glad to see some effort being made to rid our hobby of sociopaths.

Too bad the FCC doesn't know about certain psycho hams' criminal activities
either. After the FCC cleans up the bands, these scum will still be out there
destroying property and ruining reputations. Time for some license revocations
and jail time for these lowlifes!

There is no
> excuse or rational for rude, obnoxous and obscene behavior - either in
> football or in amatuer radio.
>
> Curt Breneman
> KC2EBP

And there is no excuse for vandalism, slander, libel, and stalking either,
especially in a service that exists "to recognize the value of emergency
communications, advance the radio art, and improve communication and
technical skills". The crankster-gangster world of certain CB channels has
come to amateur radio. While I don't agree with the ECPA, I certainly
understand the need for privacy in communication with so many sociopaths out
there listening. That rules out ham radio, that's for sure. For my wireless
communications I'll stick to digital cellular and digital spread-spectrum
cordless phones, thank you.

FT847 MINT Condx!
Barely Used, But must sell for personal reasons.
NOT a pre-production model! I called Yaesu with serial number
and was told that it was produced less than 2 months ago!
ALL bugs are gone! Great for satellite, and excellent on HF.
Comes with Hand Mic and MD-100 Base Mic ($175 value)
In box with ALL original paperwork, manuals, warranties, etc....
Warranty good till NOV 1999. (Shows how long I've had it)
$1600 (Only serious buyers please)
This setup would cost you More than $2000 Brand new.
and this rig is just that.... BRAND NEW

Why is it that Extra Class have the exclusive privilages on most of the CW bands when code
is supposed to be obsolete. And how come the Entry level licenses are allowed to trail blaze the
UHF and VHF bands including satelite communications. I would think that the incentive would be towards the future and not the past. OH WELL....Marconi and Armstrong and not to mention Flemming. I guess they were
all non incentive people too. Where was the ARRL back then ?

Gentlemen and Readers,
I sit today on 14.3 and listened for a while and I must say,
that i am ashamed to be a amateur. while only being a general
for only a short period i have been involved with radio on & off all my life.
I can say this much a person listening on the SW maybe thinking about becoming
a amateur will certainly be discouraged from doing such because of
the pond scum I listened to today. Today I listened to foul language,Music,
grow men acting like terrorist, men talking about each others wifes
and families.I know that we live in a country that affords us the right of free speech
but to act as such on the bands that a potential ham may be listening PLEASE!!!!
I cannot wait for the enforcement branch of the F.C.C. to take swift action against
all of the ''Extra Class CBer's we have on any off our bands. And for those
gentlemen, and I use the term loosely. I know you WILL reply and make smart comments
or try to defend your actions.but the bottom line is YOU WILL be dealt with.
IT'S ONLY A MATTER OF TIME. just my thoughts and a honest observation.

I hope not all ''Amateurs are assholes such as yourselves.

Agreeing with someone = kissing that person's ass.

You've got some strange logic, Kinky.

FWIW, I've publicly disagreed with Burt, in this forum, on different issues,
and I've done so in a civilized fashion, but being civilized is something you
wouldn't know anything about.

Hugh,

I wouldn't wait until you can do 13 wpm code to take your license test. Since it appears that you can pass the written parts, you can get some HF priviledges by passing the 5 wpm code. Granted the priviledges aren't as great as whn you pass 13 wpm, but they are still there. Once you have HF priviledges, you can develop your code speed by making on air contacts. That will be a lot more fun than code tapes or computer code practice.

If you can't pass 5 wpm right now, I would still go ahead and take the written tests. It sounds like you could get a Technician license which, while it won't give you any HF priviledges, it will get you 'on the air' and on your way.

The only downside to taking the individual elements separately is that you have to pay the test fee (currently about $6.50) for each time you test and you have the inconvenience of multiple test sessions. Both of these are a small price to pay for getting on the air sooner.

Also, if you pass test elements which don't qualify you for a license (i.e. the general written, without the code), you will receive a CSCE (certificate of successful completion of an element) for those elements. The CSCE is valid for one year - which means that in that year you need only pass the remaining elements to get your license.

My strategy would be to take the written elements you feel prepared for and if you pass them, then take the next one. It costs you nothing additional to take an element and not pass. Even a failure is good practice for the next time you take the test. FWIW, that's how I ended up with an Advanced class license when I went to take my General test(s). I figured it would be good practice, and I squeaked by.

Another plus, having a CSCE for the written parts of a license can be a great motivator into getting the code done (especially when you realize that the year is about to run out)

Good luck,
Mark

5836. Crank-Up Tower/Moter Home Question

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-21 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <75mbalnko5@clarknet.clark.net>
Source record: 155151

Hello. Right now my shack is here at my house and all of my antennas are mounted on the structure of the house, or strung between trees. But, I'm considering a career change that would require that I move every 2-5 years. So, I've decided that I motor home/tailor would be the best option, and the easiest thing to move every few years.

And I really would like to put up a tower at this motor home. But, since I will be moving every few years I can't lay some concrete and expect to get the tower back out easily. So, here's my question. Is there anyway that I could mount a US crank-up tower on the *SIDE* of the motor home and just crack it down every few years when I move? I would mount it using some type of metal clamps etc., but it couldn't touch the ground.

Now, is this at all possible to do with a motor home? Could I mount a crank-up tower on the side of a motor home safely and if so, about how high could it be? And if this doesn't work, could you suggest anything that
would? Any and all help would be appreciated. Thanks a lot for reading.

From: goldreged@aol.comJUNKBLOK
Message-ID: <19981221162234.05663.00002274@ng-cb1.aol.com>
Source record: 155152

<<Hi everyone,
Do we have any Lawyers, Solicitors or Advokats out there? I know that people have hooked wireless transmitter antenna to a baloons and kites, but what happens legally? Could it be that there are international restriction and / or regulations that apply? If so, what are they? For example:
1. I live more than 15Km away from Arlanda airport, but aircraft fly over the elevated area so close that you could almost read the brand name on the tyres. Surely there must be some sort of regulation restricting the use of Hot Air / Helium / Hydrogen baloons, even if I do live so far away from the airport?
2. What would happen (theoretically) if I wanted to put a cheap throw-away QRP UHF repeater on a Hydrogen baloon to make direct contact with a friend in Germany (forgeting the legal radio aspect for a moment)? I suppose that weather baloons would come into the same category. Would one have to file a flight plan with the aviation authority? If so, would one have to know when and where the baloon would eventually come down?
I have read somewhere that model rockets may be loosed off into the heavens willy-nilly, providing that they are lighter than a large bird (an aircraft engine is supposed to be able to ingest a large bird without damage) and that the UK regulation does not specify exactly how large a "large bird" should be (Would one be legally liable if one shot down a TriStar with a model rocket?) so would my baloon have to be lighter than a standard "large bird"?.
Best regards from Harry
http://hem2.passagen.se/sm0vpo
PS
I recently heard a story of an aircraft technician at RR in the UK who was asked to perform the big-bird-in-the-engine-intake test and was instructed to use a chicken from Tesco. Unfortunately chucked a frozen chicken into the intake!>>

Some things that would be common sense.

1. Hydrogen is not the best chioce. Helium should work.
2. Wrap it in tin foil to give a good Radar reflection.

As for the frozen bird, the article was in Pop Sci or Pop Mech Magazines. British cannon, Russian techs & it was an airplane's windshield they were shooting.

Try the Weather Channel's website for info on Weather Balloons & regulations for them. The FAA must have a website for rules. Also, try your local airport.

Good luck w/ the "Flying Repeater"

Ed G.

Hi Cecil...

One correction, he has earned a "FIRST"! Clinton is the FIRST ELECTED PRESIDENT to be impeached. I only hope he continues his "denial plan" of obfuscation long enough to totally repel the limited amount of support he enjoys in the Senate. If so, he can add another "FIRST"... that of being the first president (elected or not) to be REMOVED from office!

I said no further communication and I meant it. Oh
well. Guess you better start filing an action in small
claims court. You waited six months during which
time you never said you wanted the antenna after
I told you to tell me when you wanted it and I would
get it down. Then, you apparently either got a better
deal on another antenna or simply decided you didn't
want mine. During that time my antenna was off
```

the market so I'm out the interest on my money for
those months as well. If you weren't such a jerk
we could have settled this without a problem but
since you chose not to do so then you'll just have to
bear the consequences.
No further correspondence from you will be read.
Merry Xmas

5841. I am preparing to take amateur exams - advice/comments requested.

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-21 00:00:00 UTC
From: hughjass@REMOVE_THIS.beer.com
Message-ID: <wXgf2.1732$bJ4.1826259@news2.mia>
Source record: 155192

I am preparing to take exams. I have practiced and studied the written exams thoroughly, and I know I can pass the Novice and Technician exams. A bit more studying and I will be able to pass the written part of the General exam.

Code is another story. I am just now getting into it. It's going to be a while before I get my speed up.

What I am wondering is...I have heard several people say: don't even take the 5wpm exam...wait until you can do 13wpm so you can pass the general exam. Any comments on this?

I was thinking I would wait until around January and take the Novice, Technician, and General exams (written only), and then focus on nothing but code for the next few months until I can copy 13wpm with no problem then I could take the 13wpm and get the General license.

I am wanting to get on the HF bands, so I won't be happy with just Novice or Tech Plus.

Blah, it's a mess...comments/advice welcome.

Peace,

Hugh

>Toshiba Satellite T1910 100MHz Pentium Laptop w/ball track Mouse for sale

The Toshiba Satellite T1910 is NOT a Pentium. According to the Spec on
the Toshiba Website (and the machines I have) it's:

CPU: SL enhanced i486SXTM 33Mhz, 3.3 volt operation (8KB
cache)

Note that "SX", that means no math co-processor.

You can NOT retrofit the motherboard to a Pentium.

LOL!!! The " transcript" sounds EXACTLY like the tapes I have of FU jamming the amateur operators on 7258.
By the way, did anyone notice how subdued Greg was on 7255 today? Sounds like the letter from Mr. Hollingsworth has brought about a change in FU's on-air behavior.
What's your problem NOW??! 73.

5845. R7 documentation

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-21 00:00:00 UTC
From: mikedn@conan.ids.net
Message-ID: <FXhf2.2671$HN5.15407@news12.ispnews.com>
Source record: 155196

I moved 5 months ago, and in the process had to disassemble my R7.
I saved the documentation, so I could put it back together again,
but alas, the docs seem to have been lost in the move.

Now, while I *can* put humpty-dumpty back together again via trial and
error, testing SWR over and over again until I have all the bands re-tuned
the way I want them, life would be a whole heck of a lot better if someone
with another R7 out there could mail me, or fax me, the construction
diagram that outlines the various spacing between traps, etc.

If you have one you can share, e-mail me.

Thanks,
MD

Reading between the lines, I get the impression you are trying to go right
to hf voice.
Regardless of what you read/hear from those against hf cw, give cw a chace.
Use hf cw for at least a year before you discount it. It does have value.
You will learn a lot about amateur radio via contacts using the morse code.
Don't be too quite to discount it.

Why give up the opportunity to have fun while you are learning? There are few ways better for learning to operate CW than actually operating! Think of it as traveling in a foreign country who's language you wish to learn; total submersion works quickly.

And did I mention that its FUN?

:
:Huh?

Brian...

One 0 or 0=intra-letter spacing.
three 0's or 000=inter-letter spacing.

11101 = N
000
1110111011101110111 = 0
000
1 = E
000
1110111 = M
000
1110101 = D
000

Cecil's encoding needs work! :-)

Longer spacing may be required between words and even longer between
sentences. What do you think anyone?

========== You might have a pretty good surge if you have a lot of capacitors/inductors. My 500w Wistler will maintain that 800w surge for at least 30 sec., then blows the fuse. I replaced them with 30amp circuit breakers (couldn't find 35amp). If you are not going to add alot to your load, you may want to do that too. Mine does produce a lot of RF, interfering with the TV at the cabin. Putting it farther from the TV or antenna helps. If I was going to use it regularly, I think I would find a way to filter it (RF and 60 cycle). I don't see how rounding those square waves can hurt. I opened mine up to see if there was any damage from blowing fuses. There was more circuitry than I expected. But it looked like it was soldered by a three year old, so I decided that I wouldn't mess with the internals.

I don't think these stupid whining yuppie antenna restrictions have anything to do with liberal vs. conservative. It's just a bunch of selfish, whining yuppie scum who want to stick their nose in everybody else's business and try to rule your life. That's why I would NEVER buy a newer home with those damn stupid CC&R's. I would find a neighborhood I liked with NO whining yuppie homeowner's ASSociation trying to tell me what to do with MY property that I busted MY ass to buy! These people must have life so good that they have to invent something to complain about, hence all the stupid rules. I even saw one new development around here that will fine you $50 if you leave your garage door open. Yuppies, GET A LIFE!!!

Hi Simon,

I would like to help you with this as I work in the same city as RACAL Canada. Is this the older SBX-121A (Spilsbury) SSB radiotelephone unit. Could you be more specific as to the location of V9 (I assume it is a tube?) i.e. what module is it on? I called Racal this morning and they couldn't locate V9 in their doc. Let me know and I will call them again.

Regards,
Paul

: Thanks Paul K. N9EMX

I have experience with powering a TV with an inverter in the car while
using a 2M/440 FM transceiver. Those inverters generate a lot of
electrical noise, even affecting an FM transceiver. I can only imagine
what they would do at HF on AM/SSB. Plan on needing some good filtering...

Correction. Those in CC&R neighborhoods *gave their legal permission* to have that "yuppie scum" stick their noses into everybody's business when they signed the CC&R covenant papers.

Real definition of whining yuppie scum: Those who want to back out of their legal contracts and put up antennas and then whine when they can't...

Since the "bits" in Morse come serially, the word length of the CPU
is of relatively little importance. Bits can be accumulated as bytes
(or 16 or 32 bit words) in a buffer, then processed through a pattern
recognition algorithm through simple bit manipulations (shifts, etc.)

AX.25 (as an example) sends packets of many bytes ... that consist
of a large number of serial bits ... the CPU word length obviously
doesn't have to be equal to the maximum number of bits in a packet.

ARLB106 ARRL seeks 1998 Instructor of the Year nominees

ZCZC AG07
QST de W1AW
ARRL Bulletin 106 ARLB106
From ARRL Headquarters
Newington CT December 22, 1998
To all radio amateurs

SB QST ARL ARLB106
ARLB106 ARRL seeks 1998 Instructor of the Year nominees

The ARRL is seeking nominees for the 1998 Instructor of the Year award. The ARRL promotes 4 awards each year to those people who have helped others obtain the dream of becoming a ham radio operator. These people donate countless hours to introducing others to ham radio. You or your club can be instrumental in obtaining the recognition that these people deserve.

For nomination forms, send an email message to jwolfgang@arrl.org In the subject line write ''nomination form.'' The form is also available via the ARRL Web page. The URL is http://www.arrl.org/ead/award. Fill out this simple form and send or email it to your ARRL Section Manager by January 31, 1999. A list of ARRL Section Managers can be found on page 12 of the January issue of QST.

Applicants are placed in one of four categories and judged by a group of Educational Advisors.

Winners will receive a plaque and be featured in the ARRL Letter and the Educational Activities Newsletter. Winners will also be announced in QST.

5871. $15 Balun vs $50 Balun?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-22 00:00:00 UTC
From: Mike Barrett <zootv@erols.com>
Message-ID: <367FFCAF.A8EFF2FB@erols.com>
Source record: 155025
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment

Hi, is there a difference between the $15 baluns made by Van Gorden and the $50 baluns made by Centaur? How about between the $15 Van Gorden and the $25 W2AU? For reference, I'm looking on page 128 of Winter 98/99 Amateur Electronic Supply catalog. I am using Van Gorden baluns now and frankly I have had nothing but problems. When a strong wind blows (as is the case today), my swr goes through the roof. The change is from about 1.4:1 to over 5:1. The swr stays that way until I go up and move the lugs on the side of the balun around. I have 3 antennas, all with Van Gorden baluns, and all with problem I described above. So my questions are A) is there a difference between the cheap and the expensive baluns, either electrically or physically and B) would investing in a more expensive balun help to solve my problem with wind and swr. Thanks
Mike
KD4RNF

PS - I know the connection between the antenna wire and the solder lug is good, but could the connection in the balun go bad (and on all 3)?

Just follow through and take him to small claims court. Ask for the $100
plus any expenses such as the filing fee that you can claim.

Come now;
You've seen drunken scum careening around beer-joint
parking lots.. Does that make you ashamed to be a human?
Nonsense..

Look at the BIG picture. Ham radio is still brimming-full
of excellent, decent and knowlegable people.
A few loonies just add a little "spice" to the mix.
How dull would be a world of saints,
without a few sinners to keep them awake ;-)

Take heart.
Good hams outnumber bad by far, far.
"Bad Eggs" have been around forever.
Read a QST from 1929 or 1936 or 1947 or 1959 etc.
Bad operators were always "about to destroy ham radio"
in every age, and we're still here and there are
still vastly more good people then bad.

Happy holidays,

Save yourself money, and at the same time obtain a lot of
do-it-yourself satisfaction, by obtaining a two or three inch
diameter ferrite ring and wind on it 9 or more turns of 16 gauge twin
speaker wire. Conect the ends in an obvious manner to produce a
4-to-1 impedance, bal-to-unbal, auto-transformer.

Best ferrite core permeability is 200-to-300. But if you have no
idea what it is you have then just wind some wire on it and check to
see if it gets hot when in use. If it runs fairly cool at full power
SSB or CW morse then you have succeeded. If not then use two rings
side by side. Or change the ferrite material for a lower
permeability.

5878. Can you use an Oscilloscope for measuring SWR?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-22 00:00:00 UTC
From: "Jesse Dosher"
Message-ID: <01be2dfa$0c732820$1b0d010a@calvin3>
Source record: 155032

While I'm waiting for an SWR/wattmeter kit to arrive in the mail, I'm wondering if an oscilloscope can be used as a TDR (time domain reflectometer) to measure SWR. It seems to me that it would be possible, but I've never heard anyone discuss using that method for amateur radio. Any experience, or thoughts on that?
Thanks

That's a voltage balun. IMO, current baluns are better for ham
radio antenna applications. Unless one is specifically trying
to match a 200 ohm resistive impedance, a 1:1 choke would
usually be a better choice. IMO, a 1:1 choke cannot mask the
"wrongness" in an antenna system like a 4:1 voltage balun can.

Some people have the blinders on. How can an 8-bit microcomputer run
'C' which has 32-bit long integers? The answer is so obvious, I hope I
don't have to explain it. (Hint: use whatever number of bytes are
necessary to accomplish whatever task needs to be done. Modern
computers are so fast we don't usually have to worry about how much
time it takes and memory so cheap we don't usually have to worry
about running out of it.)

Source record: 155036

Hi all.

I wish to computerized the station and need some guidance.

Need to...

1. feed two TNC's (Packet & HF Digital) into a split screen computer display, so I can see both at once.
2. Feed packet spots to RTTY by WF1B software for contesting and send the packet frequencies direct to my Icom IC-765.

Certainly I need 2 or probably 3 comports and a RS-232<->TTL level converter. Should be a schematic for one out there somewhere. Also, split screen software to display the two TNC's.

Any suggestions as to web sources for this kind of info?

Thanks and Happy Holidays.

I think I understand the meaning behind the emotive buzzwords, Carl, and I will join you in "proclaiming" that telling any type of Amateur licensee to eat anything is inappropriate. However, let's be honest here, this is all diverting the issue from the question about why those who would make advances on HF if the code test is removed do not find it sufficiently attractive to make equally challenging advances on VHF and up. You have answered the question by telling us that royalty is not being polite...

I do have a suggestion; perhaps you could ask one of the many qualified engineers you know who would participate in amateur radio if the code test were removed to participate in this discussion. It would certainly help us all if we could hear one of them say that they told you that they are tired of the royalty... well, whatever you said.

I would like to think I have never treated anyone like a second-class anything, so they would suffer no abuse at my hand.

One thing I have figured out about rrap is that it is populated by those with extreme views and extremist positions (myself excluded, of course... :-)). I have seen things on both sides of this discussion that I feel to be inappropriate. Why, Carl, I have even seen you mistreat people.

What I will say is that I get to meet a LOT more hams than are regulars on this forum and do not feel that most of the "mainstream" PCAs or NCTAs or, an even bigger group, those who don't feel that Morse Code testing is the central probem facing Amateur Radio today, are represented here. Most hams, based on my personal experience across the country, treat other hams pretty well.

> I never said that YOU felt that way or called them that ... and I
> certainly don't think they should be called that or treated like
> that ... I just have pointed out that they ARE called that and
> treated like that by many and that that is unjust. (note the
> "(falsely considered)" qualifier in my comments quoted above.)

I knew what you meant, Carl, but I did want to take the opportunity to point out that characterizing the "2nd class citizen" treatment as mainstrem is a bit off the mark. Most hams are just about like me -- I figure everyone who passes an FCC exam is a real ham. I think that there is a lot to be gained by upgrading, and I will help and encourage everyone to take and pass every exam for which they are capable. I would do the same for someone who knew 20 wpm but had zero interest in the theory. Should he or she feel like they are being treated like a 2nd-class citizen because other hams say, "You can do it?"

There is a military term: "fratricide." It is a polite way of saying that your guys got killed by your own fire.

On December 19, the Republicans hit Bill Clinton with heavy artillery. The casualties? Two dead Republicans (Gingrich and Livingston) and Clinton climbing in the polls. That's a demonstration of fratricide.

> Mike
snip

I've never had any luck. TDR is a broadband time domain measurement
while swr is a narrow band frequency domain measurement. All the info
is there and can theoretically be converted with a FFT, but the accuracy
requirements make it impractical for most affordable measurement
equipment.
If you try to use TDR to measure the SWR of an antenna, you'll be
disappointed.
But you can use TDR to find opens/shorts or mashed places in cables with
great accuracy. You can TDR the wire to a wall-wart and learn whether
the open is at the plug or at the transformer end. Ditto for microphone
cables etc. You can measure resistor, capacitor and inductor values.
This is particularly useful for determining the tiny parasitic RLC of
components and interconnects.
TDR is a handy device, but not a replacement for an SWR bridge.

Cecil, in your binary morse encoding scheme, you have varying word lengths.

e = 1000 (4 digits)
zero = 11101110111011101110111000 (22 digits)

Then there are the 6 figure characters that can be more. So how are you going
to pull this off?

Brian/N0iMD

5900. Re: ?? Baloon antenna ??

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-22 00:00:00 UTC
From: alf sauve <alf.sauve@mindspring.com>
Message-ID: <N0Cf2.1057$dN4.4571@news.cwix.com>
Source record: 155080

Harry,

Before you get your hopes up. The coverage of a balloon wouldn't be near as great as I think you're imagining.
You'd be lucky to get 20 miles altitude out of a balloon(I know many have gone higher, but we're talking a beginner here.) That's an tun-tethered balloon. Then only at the very peak of its assent and then only for a short while. Now a balloon 20 miles up in the UK would be within line of sight of Germany (at least part of it.) but that's a lot of effort and money for a short qso.

Height is an aphrodisiac. It looks good the realities are very expensive.

Of course, the encoding scheme has variable length, because the encoding is in the time domain. How long it takes to transmit anything is dependant on how many dit's and dah's and characters and words there are. This is not unlike normal CW. How it would be handled in the software... i.e. instantiating an ioBitStream class would probably suffice.

PorkButt --- THE HOLLYWOOD YEARS

Few people know that PorkButt, starred in some very popular Hollywood films. It all started one day when a famous Hollywood special-effects man, weary from travel and frustrated at his inability to create the proper animation required for a character in a movie he was working on, pulled into a South Carolina truck stop for a cup of coffee. While nursing his cup of coffee, the special-effects man was approached by PorkButt, who was looking for a opportunity to write a bad check. But before PorkButt could open his mouth, the special-effects man took one look at PorkButt and yelled "EUREKA!" The rest is history. Yes, the famous character in the popular Star Wars movies called Jabba The Hut wasnone other than PorkButt! Unfortunately for Porky, his Hollywood career went down the dumper after the Star Wars movies ended. Due to his immense bulk, putrid stench, and lack of any social graces, he soon lost favor among the Hollywood crowd and returned to South Carolina indisgrace. Today, PorkButt can usually be found in his hamshack,jamming 3.901 every night.

Since you have a Tech license and are in the _same_ group of licensees as those who don't have full access to the HF frequencies why do _you_ refer to those individuals as "them" and "they"? Are you in some special Technician license class available to only Carl Stevenson or is it again your "holier than thou" attitude surfacing ?? It sure appears that you're attempting to set yourself apart from others. God only knows what your arrogance would produce if NCI ever attained the same status as say the ARRL.

Well, that was a most bizarre post. I didn't quote a lot of it - hopefully
everyone saw the original message for themselves. Too bad the fellow
didn't give us an inkling of what part of the country he is in.

That post does not describe ham radio. I've been active in ham radio in
big cities and small towns for more than 30 years. These things may have
happened to that one fellow, and there are some strange and undesirable
people lurking about with ham licenses. But that's not your average ham
radio, where 99.99% of hams are proudly listed (with address) in the
callbooks and callsign lookup servers.

The rest of the replies here have presented a pretty accurate picture of
the good, bad and ugly of ham participation. If this thread degrades now,
well, it held up a pretty long time.

they didn't get Al Capone for Racketeering..they got him for Income Tax
Evasion.

some times you don't get the perp on the heavier charge because he was
worried about being found out about that. Apparently Bill the P didn't worry
about his girlfriends as much.

He probably wishes he'd borrowed Ted Kennedy's car.

If clinton just had come clean in the beginning, he wouldn't be facing a
removal from office trial.

he says "lets get along" in the rose garden, yet james carville claims he's
going to release damaging information about those representatives that voted
for impeachment and one of the Baldwin Bros. is saying we should go kill
anyone who dares call Clinton the First on the carpet.

more lies from the oval office i guess.

the "shut down" of the government was a co-production of both the white house and the congress.

it's beginning to look like there's a lot of rats in D. C. (anyone surprised?)

if you are asked under oath you can:

1) tell the truth. might hurt you, might hurt others, but you won't go to
jail because you used option 2.

2) tell a lie. if you're found out you go to prison.

3) take the 5th. somewhat incriminating but you didn't testify against
yourself...

had bill the p not lied in january, we'd probably not be impeaching him now.

Hi Ed.G

Many thanks for your reply. you are echoing my original thoughts, but after a few hours with the slide-rule I realised that:

1. Hydrogen is perhaps not the best choice in terms of safety, but I do not intend to smoke anywhere near it. Hydrogen also gives more than double the lift capacity and with an industrial plastic 2.5 x 2.5 x 3 metres (12000 litres capacity alowing for waste) I should be able to lift just over one kilogram with only 20% of the bag filled. With reduction of air pressure with altitude the baloon should be able to achieve a height of 50,000 feet which is well clear of most aircraft. Helium would not give me enough lift for the electronics, let alone the battery. Also, Hydrogen is far easier to generate with just aluminium and caustic Soda.

2. A "corner reflector" composed of thin plastic sheet backed with foil would give a stronger radio reflection and be more efficient with respect to weight. I do not want more than 50gm for this since weight is all important. Unfortunately a corner reflector could generate a little attention, especially since the wind currents from Sweden would tend to move the baloon southward towards Poland then the Ukraine and off West in the rough direction of Russia. There could easily be a little activity over Russia but the useable signals would occur in the first 12-24 hours over Sweden/Poland.

I just wondered if I would "get away" with a whether baloon (I want to see whether or not it works) to establish VHF/UHF contact with a friend in Germany. We would require a wind blowing to the north for him to use such a baloon and that occurence is not too frequenct in these parts. Anyway, many thanks for your input. I will look into your suggestions since I want to be sure that I am allowed to do it (or can get away with it) before I mix my

Aluminium and Sodium Hydroxide.

Regards Harry

Absolutely !! Though I suspect it would be statutory rape and not
pedophilia. You're mistaken about the age of consent in DC, it's 16.

I'm really new at this, so I was wondering exactly where to go and when.
Should I simply drive to a rural part of southern Maine, planning to arrive
there around midnight and watch? Will I still be likely to see anything
or has the event already occurred?

neighborhoods
>are CC&R areas?
>CB RAMBO

In your case it's not a problem since you sold all your equipment. But to answer your question, there is no such area. You may have to drive a little further to work. Or you may have to come down a little in your housing standards. (older used house) It just depends on how much you want to sacrifice for the hobby. But there always is a way if you want to bad enough...

At least the fella who wrote and sung the "Ballad of Pork Butt", was a helluva lot more original than this! All you did was steal some of Jeff Foxworthy's "you must be a redneck if....." material!

THE BALLAD OF PORK BUTT
(sung to the tune of THE BEVERLY HILLBILLIES)

Let me tell ya a little story about a man named Pork...
A real fat and ugly guy, some even call him "dork"...
He got in trouble with the law, and had to leave his home.....
He knew he was a fugitive, and always had to roam.

Hillbilly, he is. Hog jowls. Smelly, too.

Well, the first thing ya know it, Pork's a headin' for the hills...
He moved to Carolina, cuz he couldn't pay his bills...
You're all invited back next week, to this locality...
To listen to his bullshit over fourteen three one three.

Below is what the author of this thread emailed me. He seems to think that if one puts his name to a posting or an email he's a man of guts. This is an exact example of the type of radio operator I was describing in my response to his original post. Oh yeah, I really want this guy (and guys like him) on the HF bands talking to people around the world representing us as a nation. <sniping with brevity>

Perhaps more people would put their name on a posting if it weren't for these losers who act like their in the school yard. I really want my wife and family to receive crank calls from an obnoxious CBer who happens to have an amateur license. This is what amateur radio has digressed to:

Wildcat, while choking-up
a hairball, vomited:

> Oh yeah right, in 1947 if someone jammed a frequency with German Marching
> music,... (blabber blabber blah blah blah...)

hooo, hummm... another gutless troll
who won't sign his name.
Let me know if you ever want to be a man
and we'll discuss your inaccuracies.

I think the chances of Billster getting removed from office are pretty slim. Remember, it takes a two thirds vote in the senate, not a majority like in the house. 10-15 more democratties would have to vote for impeachment in the senate for the removal to actually happen.

Personally, I'd like to see a looong trial. Just imagine Monica and Linda Tripp, Starr, and all the rest of the circus called before the chief justice to give PUBLIC testimony. I'd love to ask Linda Tripp if she got what she wanted for XMas this year.... an ex president in her stocking....

HAW HAW HAW

re: Split screen

I'm pretty sure this won't work with WF1B software, but I use a Kantronics KAM. With appropriate software, the KAM acts as both a VHF TNC and an HF TU and only requires one serial port. Kantronics sells a software package for the KAM that should also provide multiple windows.

re: Level converter

The ARRL handbook has a schematic for the level converter. It was reprinted in a recent QST (April or May 1998). It takes only a handful of parts which cost a lot less than Icom asks for theirs.

High-end commercial TDRs (I'm talking many thousands of dollars here)
can give read outs in "return loss", which can be converted to VSWR by
formula or table. A wattmeter/bridge is easier to use and much-much
more affordable.

Cecil, I agree. And mike didn't state an impedance ratio.

But a 1-to-1 balun is even easier on a 2" or 2.5" diameter ferrite
ring, permeability about 200 to 250. Just wind 10 or 12 turns,
uniformly spaced, of 16 or14-gage twin speaker wire around the core.
Much lighter in weight, less expensive and better isolating
properties than a hank of coaxial cable.

Baldwin was calling for Hyde to be stoned on Conan O'Brian's show the other day.

Carville has already said he's going to make the republicans "pay" for voting for impeachment.

i don't think there's any "generalizations there. that the house demos went to the rose garden to stand behind their guy is a tacit approval of those methods.

the demos seem to be asking to stay the minority party, or for starting a civil war.

i think you're still living in the 60's if you think there's new
developement with CC&R-type of restrictions.

might even depend on the state.

I don't think you can get any new development in FL without a bunch of stuff
to cover state-mandated things that provide for things like caretaking of
common areas, retention ponds, etc. The antenna stuff is secondary and
probably of no importance to the guys writing up the initial paperwork, but
it's on the standard form and there's a few people who worry about it so
they throw it in..

> "I wanna hear him TALK TOUGH!!"

Folks,

If you ever participate in the chaos present on 14,300, 14,313 or the high end of 75m, consider this:

In a nutshell, there is no such thing as morally justified jamming outside of a strictly military application -- and this definition of "military" doesn't apply to the activities of xenophobic fringe element survivalists who think that the US is "occupied" by Aliens (either earth-bound or extraterrestrial), the UN, X-Files people with black helicopters or any other neurotic paranoid delusion.

Grow up! Most of you are not in second grade anymore! Have you no self respect at all? There's nothing wrong with political discussion, but it is disgusting when those who choose to disagree resort to juvenile tactics including jamming, heckling or other activities. Go start your own discussion groups. It's a free country -- only as long as we all act responsibly and take responsibility for our actions.

Now, go find someone to have a civilized QSO with.

Curt Breneman
KC2EBP

(p.s. I do not specifically support or oppose any of the "nets" currently active on ham radio. I'm just sick of the way some people foul the airwaves.)

A very good friend needs one for some half-wit military resurection project.

I'd be willing to pay a lot, say $12 plus shipping, for one of these.

And for the puzzled readers a dynamotor is a combo dynamo-motor.

You put in, say, 12V @ amp.s to run the motor & out comes, say, 300V @ itsy current to run tubes. They sound like hair dryers when running.

They're not as practical as hair dryers.

Thanks,

Marty (marty@aa4rm.ba-watch.org)

Perhaps a pre-requisite for an Amateur Extra license should be to learn how to internalize what one reads. Go back and read, read, read the posting. This was a comment not an attack. If you think that was an attack, you have serious problem. How old are you anyway, 18 or 19?? What the hell are they teaching down in the Texas schools anyway?? Your behavior suggests that you ARE definitely one of the individuals the original poster was complaining about (which explains why you disagreed with him).

PS. If you cant respond to dissenting opinions in a civil manner perhaps you shouldn't post things to newsgroups.....you might just save yourself from a future of high blood pressure problems.

>
> Paul N9EMX

It really depends on the power supply in the radio. If your power supply has an input transformer through which all the filter capacitors are charged, then the transformer will limit the startup surge to somewhere around 150% of the max power supply rating. On the other side of the problem, if your "modified sine wave" is more like a "modified square wave" then your input transformer will get very hot and you will probably need to reduce your drive to about 60% of normal, to keep it from frying.

>>>>>
During the 1980's, net members began a campaign of coordinated complaints
to the FCC claiming that the aforementioned three were causing willful and
malicious interference to the net. N5FX and KV4FZ both received
prefabricated FCC citations at the behest of the net command. Both were
able to get the FCC to nullify their actions based on the fact that their
constructive comments did not constitute "malicious interference" and that
certain members of the net themselves were engaged in a premeditated
campaign of harassment and interference.
<<<<<

The aforementioned three? what about W1GM, K4MME, and their buddies who would deliberately operate within one kHz of the Maritime and Intercon nets, then go split frequency when the resulant jamming would begin? Herb wasn't a participant in these operations, and a lot of the jamming was from plain old bad-asses who just sought to make trouble. KV4FZ gets too much credit for the trashing of 14.313. Doesn't anyone remember the days when N5FX was a good guy on the band? I think a lot of the hell raising started during the Hurricane Net operations of 1980, and migrated to '313 as ill will fermented. Herb came along later and capitolized on it to further his own agenda.

I sold 10 acres near Tampa a few years ago. No CC&R's. Nothing stops you from building in that area. I'm sure there are more lots like that in FL as well as many used homes in older areas.

There probably are no *new* *developments* here in Phoenix without CC&R's either. But there are thousands of used homes without them. There are probably 20 towers within 5 miles of me. You will also see many towers in the original part of the retirement community of Sun City AZ.. My son just bought 2 acres of land 10 miles west of Phoenix. No CC&R's on the home he built. (He's not a ham, he got it for the horses.) I'll bet that no matter where you are there is something without CC&R's restrictions within 30 miles. As I said in my original posted answer, you may have to lower your housing standards and/or give up on that fancy new CC&R neighborhood. But there is a way. After all, what's more important, a happy wife and kids....or ham radio??

From: chopper@chop.net
Message-ID: <3681454e.6630020@netnews.msn.com>
Source record: 155051

Are you a STUMPJUMPER? You might be if...

1. You ever cut your grass and found a car.
2. You own a home that is mobile and 5 cars that aren't.
3. You think the stock market has a fence around it.
4. Your stereo speakers used to belong to the Moonlight Drive-in Theater.
5. You own four cars and no hubcaps.
6. Your idea of a great Christmas present is a gift certificate to the local bail bondsman
7. Your boat has not left the drive-way in 15 years.
8. Chiggers are included on your list of top 5 hygiene concerns.
9. You burn your yard rather than mow it.
10. Your wife has ever said, "Come move this transmission so I can take a bath."
11. You refer to the time you won a free case of motor oil as "the day my ship came in."
12. You read the Auto Trader with a highlight pen.
13. The Salvation Army declines your mattress.
14. You've ever raked leaves in your kitchen.
15. Your entire family has ever sat around waiting for a call from the Governor to spare a loved one.
16. Your grandmother has ever been asked to leave the bingo hall because of her language.
17. Someone asks, "Where's your bowling bag?" and you answer, "She's at home with the kids."
18. Birds are attracted to your beard.
19. Your wife's job requires her to wear an orange vest.
20. You were shooting pool when any of your kids were born.
21. You have the local taxidermist's number on speed dial.
22. You've ever hit a deer with your car...deliberatley.
23. You've ever given rat traps as gifts.
24. You clean your fingernails with a stick.
25. Your coffee table used to be a cable spool.
26. You keep a can of RAID on the kitchen table.
27. You hammer bottle caps into the frame of your front door to make it look nice.
28. Your wife can climb a tree faster than your cat.
29. Your mother has "ammo" on her Christmas list.
30. Every socket in your house breaks a fire code.
31. You've totaled every car you've ever owned.
32. There are more than five McDonald's bags currently in the floorboard of your car.
33. The Home Shopping operator recognizes your voice.

34. There has ever been crime-scene tape on your bathroom door.
35. You've ever been kicked out of the zoo for heckling the monkeys.
36. The taillight covers of your car are made of red tape.
37. You think a subdivision is part of a math problem.
38. You've ever bathed with flea and tick soap.
39. You think "taking out the trash" means taking your in-laws to a movie.
40. Your kids take a siphon hose to "Show and Tell."
41. The dog catcher calls for a backup unit when visiting your house.
42. You've ever bought a used cap.
43. Your CB antenna is a danger to low-flying planes.
44. You pick your teeth from a catalog.
45. You've ever financed a tatoo.
46. You've ever stolen toilet paper.
47. People hear your car a long time before they see it.
48. The gas pedal on your car is shaped like a bare foot.
49. You prefer car keys to Q-tips.
50. You take a fishing pole into Sea World.
51. You've ever stood in line to have your picture taken with a freak of nature.
52. You think the French Riviera is foreign car.
53. You go to a stock car race and don't need a program.
54. You've ever filled your deer tag on the golf course.
55. Your toilet paper has page numbers on it.
56. MOTEL 6 turns off the lights when they see you coming.
57. You own more than three shirts with the sleeves cut off.
58. You've ever spray painted your girlfriend's name on an overpass.
59. Your mother does not remove the Marlboro from her mouth before telling the state trooper to kiss her ass.
60. Your pocket knife often doubles as a toothpick.
61. You own a denim leisure suit.
62. Your dog has a litter of puppies on the living room floor and nobody notices.
63. Your family tree does not fork.
64. You see no need to stop at rest stops because you have an empty milk jug in the car.
65. You have a rag for a gas cap.
66. The dog can't watch you eat without gagging.
67. You have a Hefty Bag for a passenger-side window.
68. You show your boyfriend you really love him by carving his name on your arm.
69. You've ever had to turn your pickup truck around because of bridge clearance restrictions.
70. You've ever had to scratch your sisters name out of a message that begins, "For a good time call...."
71. You ever hit on somebody in a V.D. clinic.
72. Your brother-in-law is also your uncle.
73. You bought a VCR because wrestling is on while your at work.
74. After the Prom you drove the truck while your date hit road signs with beer bottles.

75. Your father executes the "pull my finger" trick during Christmas dinner.
76. All of your four letter words are two syllables.
77. You've ever been too drunk to fish.
78. You cut your toenails in front of company.
79. You view the upcoming family reunion as a chance to meet women.
80. Your wife has a beer belly and you find it attractive.
81. Hitchhikers won't get in the car with you.
82. You've ever heard a sheep bleat and had romantic thoughts.
83. Your house doesn't have curtains but your truck does.
84. You wonder how service stations keep their restrooms so clean.
85. You can spit without opening your mouth.
86. You consider "Outdoor Life" deep reading.
87. You call your boss "dude".
88. You think a Volvo is part of a woman's anatomy.
89. You have grease under your toenails.
90. You consider your license plate personalized because your father made it.
91. Your mother keeps a spit cup on the ironing board.
92. You think Dom Perignon is a Mafia leader.
93. You've ever been fired from a construction job because of your appearance.
94. You've ever worn a tube top to a wedding.
95. You've ever cleaned fish in your living room.
96. You think Campho-Phenique is a miracle drug.
97. You've ever had sex with your buddy's wife in a Waffle House restroom after an Atlanta Braves baseball game.

Best of Holiday Wishes to all, except STUMPRUMPERS, I mean Stumpfuckers, o'heck you know what I mean..

5975. Re: Sex Police Impeach Clinton was: Re Clinton Impeached

Newsgroup: rec.radio.amateur.misc

Source record: 155052

>>I can agree that Clinton's sex life is none of the government's business,

According to writer Edith Helmich, "Is Your Business Primed for
a Sexual Harassment Lawsuit?", in High Technology Careers,
October 1998, the U.S. federal government has made, not
only sex in the office, but further the following biologically
instinctive behaviors of uncastrated men, the business of the courts:

"Examples of sexually harassing behavior that create a hostile
atmosphere include the following:
...
* Making comments suggestive of sexual actions or situations.
* Making offensive noises or sounds.
* Touching someone's body in an offensive way.
* Using "elevator eyes" or focusing stares on
body parts.
* Making direct sexual reference to physical
anatomy or private body part.
...."

"Offensive" is as defined by the office prostitutes'
code of whorehouse conduct: if you don't provide the sugar,
then it's offensive. If like Clinton you provide the
Top Secret Pentagon clearance, or its equivalent, then
any power, aggressiveness, or perversion such as exposing
yourself as an initial come-on constitute a politically
correct "consensual" relationship. Thus do we govern
the conduct of eunuchs in a sultan's harem.

Hi, thanks for reading this note. I have just posted a beta version of my upcoming software title for Apple Macintosh, GeoStat. This program is designed to help DX'ers. It can provide current UTC, beam headings, distances, sunrise and sunset times for any DXCC country on any date from January 1, 1904 to December 31, 2039, plus automatic calibration of your system clock to the atomic clock and more! It comes complete with an extensive database containing every current DXCC country and most deleted ones, as well. It's a great tool to help you find the best time to be on the air.

Please download a fully-functional, time-limited beta version at

http://hamradio.ml.org/.click?geostat.sit

I need user feedback, so please run the program and tell me what you think! The final version should be out early next year.

73,
Mike

Cushcraft still manufactures the "Ringo" but it is not marketed as a CB antenna as I believe a law was passed forbiding the sale of metal base station antennas. You can find old CB pictures & antenna ads at http://www.retrocom.com

5980. Problem with MC-85 desk mic

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-24 00:00:00 UTC
From: corio.david@mcleodusa.net
Message-ID: <MPG.10ec929b9124c6ea989683@news.mcleodusa.net>
Source record: 154861
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.misc

Anyone know why I would have feedback in my MC-85 mic with a TS-440? It's as if RF is getting into the mic, but haven't figured out how! It renders my signal unreadable, and happens mostly on the higher bands. It happens regardless of the antenna or ground I use. I strapped the mic boom to the base using coax shield in case that was the trouble, but no luck.

The 440 does not have a monitor function, so it's not audio. I keep the speech processor turned off, both on the rig and the mic, and amn very careful not to overdrive the rig. The hand mic works great, so guess it's not the rig.

Any help would be greatly appreciated!

Thanks

Dave

Sorry, Rambo. You've proved over and over that you know virtually nothing about Amateur radio--other than what you hear on a few "choice" frequencies. You are not qualified to judge the "BIG picture". Come on down into the trenches and work with us on some public service projects. Then make your judgement call.

Yes Edward Kennedy did repeat it however the actual quote was taken from one of RFK's speeches in 1968 when he was talking about the values of older individuals as compared to younger people and the way a solution to a problem is approached.....with optimism. It was an very inspirational time.

Radio amateurs were held in very high social regard back then because of their proven emergency track record of saving lives and property. In addition, telephone patching of soldiers in Vietnam to loved ones back home was an honor to perform for concerned families. There was a high degree of decorum and respect between operators within the bands at that time as well.

Well, I am sort of thankful for 14.300 and 3.950. The goings-on there serve to keep all the trash concentrated in one spot. Otherwise, they would roam all over the bands, making life difficult for real men.

As the outlaw Josie Wales said:
"The buzzards need to eat, too, same as the worms."

I have recently been interested in getting a 2m handheld radio (I listen in a lot with a scanner), but currently only a novice (with 5wpm code) license from many years back (this was just before they implemented the no code tech.).

Anyways, I have read up on the tech books and am ready to take the exam, but have also been reading that there is possibly going to be a change in classes and my novice license may be upgraded to a tech, capable of 2m use? Thanks for any info.

Ted

really? a law? got any references on that? things like vertical and wire antennas abound that are metal...

and here i thought it was just the economics of the CB Bust of the 1970s that cleared that stuff out of the market.

Hello Ted, What the FCC is considering is turning Novice/Tech Plus class license holders into Automatic General Class license holders if and when the license restructuring happens next year. A No-Code Tech will still be a No-Code Tech with the same privileges as they have today under the proposal. A No-Code Tech will still not be allowed on the H.F. bands if the ARRL's recommendations are accepted by the FCC.

I would still go for the Tech license now since you've already studied the material.

Good Luck

Hello Tom,

I can understand your position however if one doesn't take comments to heart, or at least learn to rationalize them, it really doesn't matter if one knows the real name of whom they are addressing because an opinion is an opinion regardless of identification. A name doesn't make a personal opinion more or less valid unless there is some sort of "retaliation value" for the repondees. Think of it like a voting booth. People can cast a vote however their name doesn't appear on the actual voting slip. Their vote is still valid because it could change the results of the election. Newsgroup postings are the same way. Carefully reading into a posting can usually identify how legitimate the poster is and if it is worth the effort to respond to.

Why were metal base antennas prohibited?? Doesn't Maco still manufacture the Avanti .625 wave Penetrator? I thought the JoGunn Co. makes aluminum CB base beams. I never heard that before. Id be interested in the history behind your comments.

Very well put.

Amateur radio finally gets something beyond the DX and/or contest exchange, weather and equipment reports, and the "UR 59, and my prostate isn't doin' too bad today" routines that are heard daily. What happens? The stations are jammed and interfered with.

They don't fear the FCC, but I wonder what would happen if the wives of some of these jammers would walk into their shacks and catch them in the act? How would they explain themselves?

I wouldnt this get to you Wildcat. These guys take this stuff alittle too seriously. They use the computer like they use the radio. On the radio if they disagree with you they key on you or jam you. On the computer if they disagree with you they slander you or flame you. They lack the ability to engage in debate without declaring war on a person. Its a form of social retardation and its also a sign of our times. Sociologists call it the Generation "X" Syndrome.

Source record: 154920

>Can anyone tell me the operating frequencies for the ICO Global balloon.

From ICO webpage
http://www.icoglobal.com/

We've had many e-mails from amateur radio enthusiasts requesting details of the frequencies used by the control room team to communicate with the balloon. The team communicates with the crew using an e-mail-like text messaging system, so there is no voice radio traffic to listen in on, and no way to communicate directly with the balloon pilots. We hope that this will not diminish your enthusiasm for following this great adventure around the world.

I kind of question this since i seen CNN do a live interview with them wed morning with 2-way audio?

Whatever happened to all the old classic CB radio base station antennas? The old classics, like the infamous omni-directionals... the Astro-plane, the Starduster, and the PLR-2 base loaded antennas??? These were about the best base antennas there ever were! And whatever happened to the classic Beam antennas... the PDL-2 quad beam, the SuperScanner, the MoonRaker series, the 6, the 7, and the 8's? All of these antennas were amongst the very best. With any of these you had maximum coverage. About the only base station antenna out anymore that I have seen is the BIGSTICK! Now what kind of base station antenna is this?! Just a glorified BIG "stick"!!! I think more would be interested in this hobby if some better base antennas were out there. I still have my classic base station CB's, and would love to activate it again if I were to get hold of one of these classic omni's! So I have none up on the roof at all. Am stuck exclusively to my Ham radio.

You are a Herbie follower if ....

1. You ever cut your grass and found a car.
2. You own a home that is mobile and 5 cars that aren't.
3. You think the stock market has a fence around it.
4. Your stereo speakers used to belong to the Moonlight Drive-in Theater.
5. You own four cars and no hubcaps.
6. Your idea of a great Christmas present is a gift certificate to the local bail bondsman
7. Your boat has not left the drive-way in 15 years.
8. Chiggers are included on your list of top 5 hygiene concerns.
9. You burn your yard rather than mow it.
10. Your wife has ever said, "Come move this transmission so I can take a bath."
11. You refer to the time you won a free case of motor oil as "the day my ship came in."
12. You read the Auto Trader with a highlight pen.
13. The Salvation Army declines your mattress.
14. You've ever raked leaves in your kitchen.
15. Your entire family has ever sat around waiting for a call from the Governor to spare a loved one.
16. Your grandmother has ever been asked to leave the bingo hall because of her language.
17. Someone asks, "Where's your bowling bag?" and you answer, "She's at home with the kids."
18. Birds are attracted to your beard.
19. Your wife's job requires her to wear an orange vest.
20. You were shooting pool when any of your kids were born.
21. You have the local taxidermist's number on speed dial.
22. You've ever hit a deer with your car...deliberatley.
23. You've ever given rat traps as gifts.
24. You clean your fingernails with a stick.
25. Your coffee table used to be a cable spool.
26. You keep a can of RAID on the kitchen table.
27. You hammer bottle caps into the frame of your front door to make it look nice.
28. Your wife can climb a tree faster than your cat.
29. Your mother has "ammo" on her Christmas list.
30. Every socket in your house breaks a fire code.
31. You've totaled every car you've ever owned.
32. There are more than five McDonald's bags currently in the floorboard of your car.
33. The Home Shopping operator recognizes your voice.

34. There has ever been crime-scene tape on your bathroom door.
35. You've ever been kicked out of the zoo for heckling the monkeys.
36. The taillight covers of your car are made of red tape.
37. You think a subdivision is part of a math problem.
38. You've ever bathed with flea and tick soap.
39. You think "taking out the trash" means taking your in-laws to a movie.
40. Your kids take a siphon hose to "Show and Tell."
41. The dog catcher calls for a backup unit when visiting your house.
42. You've ever bought a used cap.
43. Your CB antenna is a danger to low-flying planes.
44. You pick your teeth from a catalog.
45. You've ever financed a tatoo.
46. You've ever stolen toilet paper.
47. People hear your car a long time before they see it.
48. The gas pedal on your car is shaped like a bare foot.
49. You prefer car keys to Q-tips.
50. You take a fishing pole into Sea World.
51. You've ever stood in line to have your picture taken with a freak of nature.
52. You think the French Riviera is foreign car.
53. You go to a stock car race and don't need a program.
54. You've ever filled your deer tag on the golf course.
55. Your toilet paper has page numbers on it.
56. MOTEL 6 turns off the lights when they see you coming.
57. You own more than three shirts with the sleeves cut off.
58. You've ever spray painted your girlfriend's name on an overpass.
59. Your mother does not remove the Marlboro from her mouth before telling the state trooper to kiss her ass.
60. Your pocket knife often doubles as a toothpick.
61. You own a denim leisure suit.
62. Your dog has a litter of puppies on the living room floor and nobody notices.
63. Your family tree does not fork.
64. You see no need to stop at rest stops because you have an empty milk jug in the car.
65. You have a rag for a gas cap.
66. The dog can't watch you eat without gagging.
67. You have a Hefty Bag for a passenger-side window.
68. You show your boyfriend you really love him by carving his name on your arm.
69. You've ever had to turn your pickup truck around because of bridge clearance restrictions.
70. You've ever had to scratch your sisters name out of a message that begins, "For a good time call...."
71. You ever hit on somebody in a V.D. clinic.
72. Your brother-in-law is also your uncle.
73. You bought a VCR because wrestling is on while your at work.
74. After the Prom you drove the truck while your date hit road signs with beer bottles.

75. Your father executes the "pull my finger" trick during Christmas dinner.
76. All of your four letter words are two syllables.
77. You've ever been too drunk to fish.
78. You cut your toenails in front of company.
79. You view the upcoming family reunion as a chance to meet women.
80. Your wife has a beer belly and you find it attractive.
81. Hitchhikers won't get in the car with you.
82. You've ever heard a sheep bleat and had romantic thoughts.
83. Your house doesn't have curtains but your truck does.
84. You wonder how service stations keep their restrooms so clean.
85. You can spit without opening your mouth.
86. You consider "Outdoor Life" deep reading.
87. You call your boss "dude".
88. You think a Volvo is part of a woman's anatomy.
89. You have grease under your toenails.
90. You consider your license plate personalized because your father made it.
91. Your mother keeps a spit cup on the ironing board.
92. You think Dom Perignon is a Mafia leader.
93. You've ever been fired from a construction job because of your appearance.
94. You've ever worn a tube top to a wedding.
95. You've ever cleaned fish in your living room.
96. You think Campho-Phenique is a miracle drug.
97. You've ever had sex with your buddy's wife in a Waffle House restroom after an Atlanta Braves baseball game.

Best of Holiday Wishes to all, except STUMPRUMPERS, I mean Stumpfuckers, o'heck you know what I mean..

The PorkButt Christmas Special Hosted by KT4TR.....

Lots of fun this year! John, KC3AU will lead us in prayer and will give a short devotional.

We will have some surprises too....!

enjoy

6016. Old hams?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-24 00:00:00 UTC
From: k1oik@my-dejanews.com
Message-ID: <75tb0a$fe1$1@nnrp1.dejanews.com>
Source record: 154927

You're Not Old UNLESS You Can Remember...
* You recall when hams were men.
* ~Being sent to the drugstore to test vacuum tubes for the TV.
* ~When Kool-Aid was the only other drink for kids, other than
milk and Sodas.
* ~When there were only 2 types of sneakers for boys, & girls
wouldn't wear them.
* When passing a ham test meant something
* ~When boys couldn't wear anything but leather shoes to
school.
* ~When it took five minutes for the TV to warm up.
* ~When nearly everyone's parents smoked.
* ~When all your friends got their hair cut at the kitchen table.
* ~When nearly everyone's Mom was at home when the kids got there.
* ~When nobody owned a purebred dog.
* ~When hams built equipment
* ~When hams had courage and fought in a war
* ~When a dime was a decent allowance, and a quarter a huge bonus.
* ~When you'd reach into a muddy gutter for a penny.
* ~When girls neither dated nor kissed until late high school,
if then.
* ~When your Mom wore nylons that came in two pieces.
* ~When all your teachers wore either neckties or had their
hair done, every day.
* ~When you got your windshield cleaned, oil checked, and gas
pumped, without asking..... for free, every time.
* ~When any parent could discipline any kid, or feed him, or use
him to carry groceries, and nobody, not even the kid, thought a thing
of it.
* ~When it was considered a great privilege to be taken out to
dinner at a real restaurant with your parents.
* ~When schools threatened to keep kids back a grade if they
failed-and actually did it.

Gentlemen,
Again this was not to flame someone this is just
a simple observation, the folks who are back biting each other.
must have some sort of guilt. such as ''Jamming,Stumpjumping''
I also concur I bet there wife would leave them If they saw how there
spouse conducted himself in such a manner.especially when it comes to
talkin about each others wives as they do.I one respect my wife to the utmost,
we as men feel that we are ''TOUGH,MACHO''dont hold a candle to most women,
I felt totally different after I witnessed the birth of our child, man talk about
really feeling humble.this thread has gotten a lot of mileage and I do not
use the computer to HIDE behind as you''Tough Guys suggest.
as for joining this group of let me put it this way(UNDESIREABLES)
I would hand in my ticket or ask to join the enforcement burea of the F.C.C.
agian this is an opinion.they are a dime a dozen.

>there is a way. After all, what's more important, a happy wife and
>kids....or ham radio??
>

Just bought a new house here in Ohio, good neighborhood no restrictions. Did my home work called county recorder office checked for deed restrictions. The caveat, went out into the country to buy and paid hefty price. Anything can be bought for the right price, including people. Bottom line in housing I found, when you move into a "housing development" you have to contend with everyone else.

BTW another post mentioned yuppie as the source restricted communities. I lived in Northern VA for 5 years, and found the home owners associations were usually run by former government regulators. Most of whom had retired and had the urge to screw with another person through BS regulations.

I have cut out the bull shit as I'm sure you don't want to be board anymore
than I was when I read this.

This is pure bull shit as anyone that has listened to the fiasco on 14.313 and
300 over the years. Herb and his "gang" has intentionally interfered with
net operations and has caused problems for other amateurs that had QSOs near
those frequencies. There was a time that Herbie and Mike (MUJ) would interfer
with operations on 14.313 by one going to LSB and the other going to USB above
and below the net frequency just to cause interference.

Anyone that will believe that Herb is a saint (read the message) must have
rocks in his head. Herb thinks that he is the savior of ham radio and
humanity. Herb is nothing but a wart on the ass of humanity. To tell you the
truth the long distance companies really don't give a shit about a few phone
calls made over ham radio. If they depended on those calls then they really
need help.

Herb and his followers need to be removed from ham radio. He has caused a lot
of trouble which he is good at doing.

Tired of this whinning. Lets get moving and clean up ham radio.

COP

I hear you Ham_man. I really dont take this stuff, or anything else seriously without first identifying the source. Especially from a frustrated 20 or 30 something who wants to set the world on fire. Whats truly amazing is that this guy equates posting a name with man-hood. I would have loved to have tested Mr. Stinson's man-hood when I was in a fox-hole in Korea and 60 Chinese infantrymen wanted to blow my head off and feed me to the dogs.

I didn't know it then but I guess all I had to do was shout out my name and they would have ran into the night like little girls. LOL

Plenty of these antennas are still in production. The Moonraker, PDL-II, The Starduster, The Penetrator are all still easily bought. Many antenna manufacturers went out of business when CB lost its popularity in the early 80's.

Message-ID: <19981224095607.25321.00000358@ngol02.aol.com>
Source record: 154937

Want to use your scanner on the airplane? No problem. Here's how you do it: go to Radio Shack and get a stereo-to-mono 1/8" headphone adapter. If you're using a Bearcat, also get a step-down 1/8 to 3/32" adaptor. Bring your Walkman and two pair of Walkman-type headphones. Plug your "real" headphones in to the scanner and hide the scanner under a folded newspaper. Make the Walkman visible with the "dummy" headphones attatched and stashed underneath the newspaper or in some other invisible place. When the flight attendant comes by to "check", all he/she will see is a Walkman and you wearing the headphones. I have used this method for about 15 years with a 100% success rate. Happy scanning!

6028. ARLP052 Propagation de K7VVV

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-24 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlp052.1998@arrl.org>
Source record: 154939
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB PROP @ ARL $ARLP052
ARLP052 Propagation de K7VVV

ZCZC AP52
QST de W1AW
Propagation Forecast Bulletin 52 ARLP052
From Tad Cook, K7VVV
Seattle, WA December 24, 1998
To all radio amateurs

SB PROP ARL ARLP052
ARLP052 Propagation de K7VVV

The last propagation bulletin of 1998 is going out one day early so it can be distributed before the Christmas holiday. The author wishes everyone a warm holiday greeting, and promises better HF DX for all in 1999.

Solar activity was off a bit last week, with average sunspot numbers lower by almost 55 points, and average solar flux down by only 2 points. Average solar flux for the previous ninety days was 133, and flux values were above this level on every day except Tuesday, indicating a general upward trend.

For the next few days, solar activity should be higher. The Thursday through Sunday solar flux is predicted to be 145, 148, 150 and 154, with planetary A index for each of those days at 9.

Recently we have reported optimistic news on the recovery of the Solar and Heliospheric Observatory, or SOHO project. There is a new report this week that the remaining gyro has failed, making future recovery operations when the craft is pointing away from the sun impossible. After SOHO was off for a long period earlier this year, only one of the three gyros remained working, and now that last one has failed. Currently there are no scientific operations planned until new flight software for gyroless operations is implemented. For more details, see http://sohowww.nascom.nasa.gov.

In VHF news this week, KD4ESV in Florida worked TI2ALF in Costa Rica on 6 meters, and heard K2OY, also in Florida, working HP2CWB in Panama. WA5JCI in Texas heard strong signals on 6 meters from ZF1DC in the Cayman Islands.

Sunspot Numbers for December 17 through 23 were 93, 76, 88, 98, 72, 56 and 78 with a mean of 80.1. 10.7 cm flux was 146.1, 154.7, 137.3, 134.7, 135.3, 128.8 and 139.8, with a mean of 139.5, and

estimated planetary A indices were 2, 3, 7, 11, 3, 5 and 8, with a
mean of 5.6.

Wonderful !!!

Maybe next you can tell how to sneak a smoke on the airplane while
smuggling propane canisters under your coat. That'll be sure and add
to airline safety.

>"Where's that big 'ol CB RAMBO??"
> "I wanna hear him TALK TOUGH!!"

GREAT advice!!!

And maybe they've been saving up for you so that next time
the oxygen masks drop, yours will be full of laughing gas
instead of O2.

Wouldn't that be a scream? Ha ha ha?

Certain electronic devices aren't allowed because their intermediate
frequency oscillators may create interference to aircraft radios,
navigational aids, and other devices deemed important for safety.

The scanner rule may seem silly with all of laptops, game boys,
and CD players being used up there. With 100-300 MHz laptops, it
would seem that the xtal oscillators would possibly interfere with
VHF. CD players, gameboys, etc., probably wouldn't because their
clock speeds and oscillators are far slower.

It might just be safer to ask the pilot if you can use your scanner.

I think the main fear is that people will haul TRANSmitters on
board. Since 5 watts of RF CAN wreak some havoc if placed at
the right frequency, the key is to show the pilot that what you
have really is just a scanner and maybe it'll actually be permitted.

Remember, on a plane the pilot is king. If he/she wants you
detained, you will be detained.

This PORK BUTT fella has been talkin' tough all day long. He seems to think he's pretty hot shit. He thinks he can whoop anybody on 14.300 MHz. In fact, he just made the comment about "bring your own orthopedic surgeon" while I'm typing this.

So let's put your money where your mouth is, Rich. I challenge you to a boxing match! Let's do it in Dayton! Complete with gloves, referee, the whole works! And we'll do it to benefit charity....like "The Courage Handi-Ham Center"!

You don't really know who I am. I have no formal boxing experience, I have no training in the marshall arts. I'm about six foot two, two hundred twenty five pounds and close to your age, Porky. I'm just sick of your fucking mouth and would like a chance to shut it!

So how about it, Porky? It gives us about five months to train. We can have some of the gang contact Dayton and have this "benefit boxing match" promoted well ahead of time. I won't be representing any "Stumpjumper's". I'll be representing the general ham radio population who's sick of your shit, Porky.

I'll be anxiously awaiting your reply....

B.G.L.

** The 14313 - 3894.5 - 3901 Xmas Story (...or Santa visits PorkButt's house) **

As that gravel-voice has said on the above freqs for 5 Years
every year at this time like clockwork: " Enjoy.....Ya've earned it ! "

'Twas the night before Christmas and God it was neat,
The kids were both gone and my wife was in heat.

The doors were all bolted, the phone off the hook,
It was time for some nooky, by hook or by crook.

Momma in her teddy, and I in the nude,
Had just hit the bedroom and reached for the lube.

When out on the lawn there arose such a cry,
That I lost my boner and Momma went dry.

Up to the window I sprang like an elf,
Tore back the shade while she played with herself.

The moon on the crest of the snowman we'd built,
Showed a broom up his ass, right up to the hilt.

When what to my wandering eyes should appear,
But a rusty old sleigh and eight mangey reindeer.

With a fat little driver, half out of the sled,
A sock on his ear, and a bra on his head.

Sure as I'm speaking, he was high as a kite,
And he yelled to his team but it didn't sound right,

"Whoa Shithead! Whoa Asshole! Whoa Stupid! Whoa Putz!
Either slow down this rig or I'll cut off your nuts!

"Look out for the lamp post and don't hit the tree!
Quit shaking the sleigh 'cause I gotta pee!"

They cleared the old lamp post, the tree got a rub,
Just as Santa leaned out and threw up in my shrub.

And then from the roof we heard such a clatter,
As each little reindeer emptied his bladder.

I was donning my Jockeys to cover my ass,
When down the chimney he came with a helluva crash.

His suit was all smelly with perfume galore,
He looked like a bum and smelled like a whore.

"That was some brothel!" he declared with a smile,
"The reindeer were pooped and I just stayed a while."

He went to the kitchen, for himself poured a drink,
Then whipped out his pecker and pissed in the sink.

I started to laugh, my wife smiled with glee,
For, here, the old boy was hung to his knee.

Back in the den Santa reached in his sack,
But his toys were all gone and some new things were packed.

The first thing he found was a pair of false tits,
And the next was a gun like a penis that spits.

A box full of condoms was Santa's next find,
And six pair of panties (the edible kind).

A bra without nipples, a penis extension,
And several more things that I shouldn't mention.

A cock ring, a G-string and all kinds of oil,
A dildo so long that it lay in a coil.

"This stuff ain't for kids -- Mrs. Santa would shit --
So I'll just leave 'em here and right now I'll split."

He filled every stocking and then took his leave,
With one tiny butt plug stuck under his sleeve.

He'd've sprung to his sleigh but his feet were like lead,
Thus he fell on his ass and broke wind instead.

In time he was seated, took the reins off the hitch,
Saying, "take me home Rudolph, this night's been a bitch."

The sleigh was near gone when we heard Santa shout,
"The best thing 'bout pussy is, you can't wear it out!"

6040. Santa Freqs ??

6044. Merry Christmas, CBRAMBO

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-24 00:00:00 UTC
From: Larry <larya@home.com>
Message-ID: <iZxg2.511$%B5.129@news.rdc1.on.wave.home.com>
Source record: 154955

Greetings

I don't agree with most of what you say but I have learned to take most of it with a grain of salt.

Initially, I got overly concerned with your comments, but, I soon learned that I was letting you get to me. Now, I just read some of your comments and let it go at that. I don't see any point in leting you bother me.

If I read someones request, and chose to do so, I respond via the group or private email.

I used to read items on rec.radio.cb but found that you can't educate people who don't want to learn.

Merry Christmas, CBRAMBO, and enjoy 1999.

Larry ve3fxq

EDITOR'S NOTE: Because of the holidays, the combined December 25-January 1 editions of The ARRL Letter and ARRL Audio News, distributed December 24, 1998, will be the last for 1998. The next editions will be distributed January 8, 1999. Late-breaking news will be available via The ARRLWeb Extra or W1AW bulletins. ARRL Headquarters will be closed Christmas Day, Friday, December 25, 1998, and New Year's Day, Friday, January 1, 1999. We wish you and yours a safe and enjoyable holiday season!--Rick Lindquist, N1RL

IN THIS EDITION:

* +"Wireless modem" QRM curbed
* +W1AW has new operating hours
* +Hams help search for missing vessel
* +Kansas kids test NASA QSO project
* RTTY Roundup plaques to be awarded
* Alpha/Power buys RFconcepts
* Dutch lowfer experiment flies
* A Ham's Night Before Christmas [poem]
* Solar update
* IN BRIEF: This weekend on the radio;
* IOY nominations due soon; NACEC conducts
* "Radio Round Up"; New TIS Coordinator;
* ARRL/TAPR site adds DCC highlights;
* IDEA establishes scholarship; New address
* for Director Kanode; Satellites get
* OSCAR assignments; K6MD promoted to
* Brigadier General; K1HT appointed to contest panel

+Available on ARRL Audio News

COOPERATION CURBS "WIRELESS MODEM" QRM

A maker of "wireless modems" and a cable TV company that's been installing the units across the US have told the ARRL they'll do whatever it takes to keep the devices from causing interference to amateur HF bands. The ARRL contacted the two companies after receiving reports from members of the Northern California Contest Club about 80-meter interference from the devices. The devices, manufactured overseas by Phonex Corporation of Midvale, Utah, operate under Part 15 of the FCC's rules. This means that they may not cause interference to licensed services.

"Although the Phonex has complied with required FCC regulations, the ARRL has identified a potential interference problem on the low end of the 80-meter band," said Phonex Senior Engineer Scott Bullock, KK7LC. "We have several hams in our organization, and we do not want to cause any interference to any amateur band."

Wireless modems are first cousins to wireless telephone jacks used to provide additional telephone jacks without wiring. Both are sold in pairs. One unit plugs into the telephone connection while the other serves as a telephone or modem jack; both plug into convenient ac outlets. The carrier-current devices impose RF on the power line to transmit data back and forth in the form of wideband FM.

Other units made by Phonex and sold as wireless extension telephone jacks under other brand names operate on 3.025 and 6.436 MHz, where they generally will not affect the ham bands. Unfortunately, the Phonex wireless modems operate on 3.52 and 8.27 MHz. Cable giant TCI has been installing these units in some subscribers' homes to make a convenient connection from the cable box to the telephone line to transmit billing information. Wireless modems transmit a continuous carrier on the lower frequency, whether the phone connection is in use or not, and on both frequencies when the remote line is in use.

ARRL Lab Supervisor Ed Hare, W1RFI, says the League received reports in mid-December about persistent interference on the low end of 80 meters and on other bands. The interference, consisting of discrete, somewhat noisy and drifting carriers, typically showed up around 3520 to 3530 kHz, but harmonics have been reported as high as 20 meters. ARRL Lab tests verified that the devices pose a serious QRM problem on the lower part of 80 meters and possibly on other bands.

FCC rules permit the unlicensed devices to radiate signals on HF of up to 30 uV/meter, even on an amateur band. Device operators--TCI in this case--must correct any resulting interference, however.

TCI Senior Engineer Tony Werner said TCI plans to eliminate the 3.52 MHz wireless jacks it's installed "as expediently as possible" by replacing them with 3.3 MHz units or by running a hardwired telephone connection. TCI will immediately replace units that cause interference and automatically replace other 3.52-MHz units during routine customer service and plans to use

nothing but 3.3-MHz units in the future. Hams experiencing harmful interference they believe is related to these devices should contact their local TCI office. TCI says it will be at least a few weeks before it has service information and replacement units on hand.

Phonex says it's made the necessary production changes to move the operating frequency of its units to 3.3 MHz. If one of its units causes interference, he said, Phonex will retune or replace it. Hams can contact Phonex Customer Service at 800-437-0101.

"Both companies have been refreshingly cooperative," said Hare, who--as his W1RFI call sign reflects--is the League's point man for interference issues. "If every RFI problem that involves Amateur Radio could be fixed so quickly, I would probably be out of a job."

Hare said hams with questions about this issue may contact him directly at ARRL HQ at 860-594-0318; e-mail ehare@arrl.org. Additional information is available at http://www.arrl.org/tis/info/rfiteljx.html

W1AW HAS NEW OPERATING SCHEDULE

Starting Saturday, January 2, 1999, Maxim Memorial Station W1AW will be on a new operating schedule that reinstates morning code practice on four weekdays and expands weekday operating hours for visiting hams.

The new schedule reinstates one hour of code practice Tuesdays through Fridays at 9 AM, while discontinuing morning bulletin transmissions. This makes room to expand visitor operating hours on weekdays by three hours. The new visitor hours will be 10 AM until 4 PM, Monday through Friday.

The new schedule eliminates weekend code practice and bulletins, however. The demise of weekend hours also means an end to Saturday W1AW operation by visiting hams. The evening code practice and bulletin schedules remain almost unchanged, except that the final transmission of the day will be a code bulletin at 11 PM Eastern Time. The midnight digital and 12:45 AM voice bulletins will be discontinued.

The complete new schedule appears in January 1999 QST, page 74 and on ARRLWeb at http://www.arrl.org/w1aw.html. Members may direct questions and comments about the new schedule to W1AW, 225 Main St, Newington, CT 06111; e-mail w1aw@arrl.org.

WISCONSIN HAMS HELP IN SEARCH FOR MISSING VESSEL

Hams in Wisconsin have helped to search for signs of a fishing vessel missing for about two weeks on Lake Michigan. At the Coast Guard's request, Ozaukee County, Wisconsin, Emergency Management organized a search effort earlier this month for any remains of the fishing boat Linda E. The 40-foot vessel had three people aboard. Searchers were looking for debris from the boat that might have washed up along the shore.

On December 15 and 19, Ozaukee County EC and Incoming Wisconsin SEC Stan Kaplan, WB9RQR, reports that hams and other searchers scoured some 22 miles of shoreline south of Port Washington for any clues that might point to the

fate of the missing vessel. "There's nothing definitive at this point," said Kaplan. "We may have to repeat it next spring."

Most search personnel were members of OZARES, the county's Amateur Radio Emergency Service organization. They had help from local and regional search and rescue teams, including the Civil Air Patrol. Pairs of searchers walked the shoreline, communicating via Amateur Radio with a mobile station positioned on a high bluff nearby, Kaplan said. The mobile station relayed reports to emergency management's communications hub.

In addition to H-Ts, Kaplan said, each walking pair carried a GPS unit, allowing the searchers to pinpoint the few items found, all of which turned out to be unrelated to the missing craft. The GPS units also permitted accurate mapping of the areas covered by the searchers.

Milwaukee's Channel 12 TV covered the search and aired a short story on it, Kaplan said.--thanks to The Badger State Smoke Signals/Jim Romelfanger, K9ZZ

KANSAS KIDS TEST NASA QSO PROJECT

With a big lull looming for Space Amateur Radio EXperiment--or SAREX--school contacts, NASA is toying with the idea of launching a more earthbound version of the SAREX program that puts youngsters in direct contact with astronauts via Amateur Radio. In late November, a group of pupils at the Pleasant Valley School in Winfield, Kansas, gave the idea a test flight during a 20-meter QSO with NASA astronaut Laurel Clark, KC5ZSU. Clark, a NASA mission specialist, spoke to the kids from W5RRR at the Johnson Space Center in Houston.

Helping out with the arrangements was John Nickel, WD5EEV, an early member of the SAREX Working Group and a retiree of Lockheed, a NASA subcontractor.

"I set up a portable station at the school, so we were all in a very full class room.," Nickel explained. His wife, Karen, WD5EEU, and he had a few practice sessions with the kids ahead of time so they'd feel at home with Amateur Radio.

The sole SAREX mission scheduled for 1999 doesn't happen at least until early April, and construction of the International Space Station is only now getting under way. Amateur Radio is considered "required crew equipment" aboard the ISS, but the first Earth-to-ISS school contacts are at least a couple of years off.

ARRL Educational Activities Department Manager Rosalie White, WA1STO, of the SAREX Working Group said similar terrestrial but space-related QSOs could fill the impending gap in the SAREX program. "This terrestrial QSO was a test to see how this new project involving astronauts and schools can work," she said. "These exciting school QSOs can tide us over until we're all set for future International Space Station QSOs."

SAREX Working Group Chairman Roy Neal, K6DUE, agreed. He called the idea "an excellent way to stay in touch with our schools while SAREX converts into ARISS facilities over the next few years."

Matt Bordelon, KC5BTL, SAREX Principal Investigator at NASA, helped with the arrangements. He said the current plan is to attempt these types of QSOs on an occasional basis, spending about 30 minutes with a school via HF or via one of the amateur satellites. "It gives the astronauts practice with school contacts via Amateur Radio, and it keeps ham radio visible," he said.

RTTY ROUND-UP PLAQUES TO BE AWARDED

For the first time ever, Overall and Division High-Score Plaques will be awarded in the 1999 ARRL RTTY Roundup. The event takes place January 2-3, 1999. "Because of the hard work and efforts of Jay Townsend, WS7I, and the late Northwestern Division Director Mary Lou Brown NM7N, we will be awarding over 20 plaques in the upcoming event," says ARRL Contest Branch Manager Dan Henderson, N1ND.

The plaques will be similar in size to those awarded in the popular ARRL International DX Contest, the ARRL November Sweepstakes, and the June VHF QSO Party. The attractive design features an old teletype machine and a modern computer and will include the winner's information.

Henderson expressed gratitude to "the many sponsors who have stepped forward to make this new plaque program possible." He said plaques also will be made available to any previous RTTY Roundup winners.

For price information or to order plaques for past years, contact Henderson at 860-594-0232; e-mail dhenderson@arrl.org.

ALPHA/POWER BUYS RFCONCEPTS

Alpha/Power, a leading manufacturer of HF linear amplifiers, has purchased the RFconcepts product line of VHF and UHF amplifiers. All service and repairs now are being handled by Alpha/Power, which is headquartered in Longmont, Colorado. The sale price was not disclosed.

The deal included the RFconcepts name and product line as well as inventory, current and non-current designs and manuals, finished goods, tooling, and vendor and dealer lists. Kantronics President Phil Anderson, W0XI, had announced in September that he was looking for a buyer for the company's RFconcepts product line, saying it "does not fit within our strategic plan for the future." Kantronics had bought the RFconcepts division in 1989 and moved it from California.

For the time being at least, Alpha/Power will continue to market RFconcepts products through the same dealer network. Alpha/Power expects to be manufacturing new products under the RFconcepts name by early 1999. A spokesman said Alpha/Power would be working with Kantronics to ensure a smooth transition. "We feel like it's a really good fit for our product line," he said of the RFconcepts purchase.

For more information, contact Alpha/Power, 14440 Mead Ct, Unit B, Longmont, CO 80504; tel 970-535-4173; http://www.Alpha-Power-inc.com.

DUTCH LOWFER EXPERIMENT FLIES

A serious effort by several Dutch radio amateurs to work as many other LF stations as possible has resulted in QSOs between PA2NJN in The Netherlands and several stations in the UK and Europe on 136 kHz. The original test was scheduled for November 14. Plans called for using a kite-borne 900-foot antenna, but that day produced no wind. However, the following Saturday, November 21, provided enough wind to loft the wire to about 80 degrees--nearly vertical.

Kite crewmember Richard Middel, PD1AOT, reports the day was cold (-6 degrees C), and windy. "When the kite reached a good height, we tied it to a string of thick nylon cable so the kit would stay there where it was," he said. "It was isolated from ground and it got charged with static electricity." Middel said that within seconds, he and Jeroen, PD1APA, got shocks from built-up static charges. "Sparks were springing from a distance of 2 cm," he said. At that point the antenna was not connected to the transceiver.

The group used a loop antenna and an "active antenna" for receiving, but Nico Nienhuis, PA2NJN, reports that once the transmitting antenna was in the air, they were unable to receive as well.

The transmitter power was 150 W. Calculations by the Dutch operators estimated the EIRP (effective isotropic radiated power) to be in the range of 10 to 15 W. Stations worked included G3KEV, G3YXM, G4GVC, ON6ND and ON6UX.

PA2NJN also got reception reports from several European listeners, including France, Germany, Sweden, Scotland, and Italy. Best DX was a listener report from IK5ZPV in Italy, a distance of 1095 km.

Operators at the station in Usquert, The Netherlands, included PE1PFR, PA3GUC, and PA2NJN. Others who monitored PA2NJN's experimental operation are requested to send a report to Nico J. Nienhuis, PA2NJN, Mensingeweersterweg 7, NL 9967 PA Eenrum, The Netherlands.

The ARRL has petitioned the FCC to create two low-frequency Amateur Radio allocations at 136 kHz and at 160 kHz. The League has proposed permitting CW, SSB, RTTY/data, and image emissions for amateurs in a 2.1-kHz "sliver band" from 135.7 to 137.8 kHz and in a 30-kHz segment from 160 to 190 kHz. (See The ARRL Letter, Vol 17, No 44, for November 6, 1998). The League proposed making the two bands available to General and higher licensees.--thanks to Jim Romelfanger, K9ZZ/Badger State Smoke Signals

A HAM'S NIGHT BEFORE CHRISTMAS

Yet another corruption of Clement Clarke Moore's classic Christmas tale, this time distorted by Gary Pearce KN4AQ, and the Raleigh Amateur Radio Society, Raleigh, North Carolina, December 2, 1996.

'Twas the night before Christmas,
And all through 2 meters,
Not a signal was keying up
Any repeaters.

The antennas reached up
From the tower, quite high,
To catch the weak signals
That bounced from the sky.

The children, Tech-Pluses,
Took their H-Ts to bed,
And dreamed of the day
They'd be Extras instead.

Mom put on her headphones,
I plugged in the key,
And we tuned 40 meters
For that rare ZK3.

When the meter was pegged
by a signal with power.
It smoked a small diode,
and, I swear, shook the tower.

Mom yanked off her phones,
And with all she could muster
Logged a spot of the signal
On the DX PacketCluster,

While I ran to the window
And peered up at the sky,
To see what could generate
RF that high.

It was way in the distance,
But the moon made it gleam.
A flying sleigh, with an
eight-element beam,

And a little old driver
who looked slightly mean.
So I thought for a moment,
That it might be Wayne Green.

But no, it was Santa,
The Santa of Hams.
On a mission, this Christmas,
To clean up the bands.

He circled the tower,
Then stopped in his track,
And he slid down the coax
Right into the shack.

While Mom and I hid
Behind stacks of CQ,
This Santa of hamming
Knew just what to do.

He cleared off the shack desk
Of paper and parts,
And filled out all my late QSLs
For a start.

He ran copper braid,
Took a steel rod and pounded
It into the earth, till
The station was grounded.

He tightened loose fittings,
Resoldered connections,
Cranked down modulation,
Installed lightning protection.

He neutralized tubes
In my linear amp.
(Never worked right before;
Now it works like a champ).

A new, lowpass filter
Cleaned up the TV.
He corrected the settings
In my TNC.

He repaired the computer
That would not compute,
And he backed up the hard drive
And got it to boot.

Then, he reached really deep
In the bag that he brought,
And he pulled out a big box.
A new rig? I thought!

A new Kenwood? An ICOM?
A Yaesu, for me?!
(If he thought I'd been bad,
it might be QRP!)

Yes! The Ultimate Station!
How could I deserve this?
Could it be all those hours
that I worked Public Service?

He hooked it all up
And in record time, quickly
Worked 100 countries,
All down on 160.

I should have been happy,
It was my call he sent.
But the cards and the postage
Will cost two months' rent!

He made final adjustments,
And left a card by the key:
"To Gary, from Santa Claus.
73."

Then he grabbed his H-T,
Looked me straight in the eye,
Punched a code on the pad,
And was gone with no good-bye.

I ran back to the station,
And the pileup was big,
But a card from St. Nick
Would be worth my new rig.

Oh, too late, for his final
came over the air.
It was copied all over.
It was heard everywhere.

The Ham's Santa exclaimed
What a ham might expect,
"Merry Christmas to all,
And to all, good DX!"

SOLAR UPDATE

Solar Santa Tad Cook, K7VVV Seattle, Washington, reports: The last propagation bulletin of 1998 is going out one day early so it can be distributed before the Christmas holiday. The author wishes everyone a warm holiday greeting, and promises better HF DX for all in 1999 [We'll hold you to that one, Tad!--Ed].

Solar activity was off a bit the past week, with average sunspot numbers lower by almost 55 points, and average solar flux down by only two points. Average solar flux for the previous 90 days was 133, and flux values were above this level on every day except December 22, indicating a general upward trend. For the next few days, solar activity should be higher. The December 24-27 solar flux is predicted to be 145, 148, 150 and 154, with planetary A index for each of those days at 9.

Recently we have reported optimistic news on the recovery of the Solar and Heliospheric Observatory, or SOHO project. There is a new report this week that the remaining gyro has failed, making future recovery operations when the craft is pointing away from the sun impossible. After SOHO was off for a long period earlier this year, only one of the three gyros remained working, and now that last one has failed. Currently there are no scientific

operations planned until new flight software for gyroless operations is implemented. For more details, see http://sohowww.nascom.nasa.gov.

In VHF news this week, KD4ESV in Florida worked TI2ALF in Costa Rica on 6 meters, and heard K2OY, also in Florida, working HP2CWB in Panama. WA5JCI in Texas heard strong signals on 6 from ZF1DC in the Cayman Islands.

Sunspot numbers for December 17 through 23 were 93, 76, 88, 98, 72, 56, and 78, with a mean of 80.1. The 10.7-cm flux was 146.1, 154.7, 137.3, 134.7, 135.3, 128.8, and 139.8, with a mean of 139.5. The estimated planetary A indices were 2, 3, 7, 11, 3, 5 and 8, with a mean of 5.6.

IN BRIEF:

* This weekend on the radio: The Stew Perry Topband Distance Challenge and the RAC Winter Contest are the weekend of December 26-27. See December QST, page 95, for details. ARRL Straight Key Night is January 1 (starts December 31 local time). See December QST, page 97, for details. The ARRL RTTY Roundup and the Kid's Day Operating Event are January 2-3. See January 1999 QST, page 84. Just ahead: The Japan International DX Contest (CW), Meet the Novices and Technicians Day, the QRP ARCI Winter Fireside SSB Sprint, the North American QSO Party (CW), and the Hunting Lions in the Air Contest are the weekend of January 8-10, 1999. See January 1999 QST, page 84.

* IOY nominations due soon: Nominations for the annual ARRL Instructor of the Year awards are due to section managers by January 31, 1999. It's easy to nominate an exceptional ham radio instructor, teacher, or recruiter. The nomination forms are available on ARRLWeb at http://www.arrl.org/ead/award/application.html. Nominations may be sent to section managers via e-mail. For more information, contact Jean Wolfgang, WB3IOS, e-mail jwolfgang@arrl.org; tel 860-594-0219. Award winners receive plaques and recognition for their time and effort in service to the amateur community.

* NACEC conducts "Radio Round Up": As Hurricane Mitch recovery efforts continue, the North American Center for Emergency Communications (NACEC) is conducting its first-ever Radio Round Up to acquire additional equipment for its "Mission Honduras" project. Through the Radio Round Up, individuals, organizations, and companies help by sponsoring 2-way communications gear needed in remote areas of Honduras. So far, the nonprofit NACEC says it's received contributions totaling just over $2300 targeted for Mission Mitch Honduras. The gear will help expedite recovery operations in the flood-ravaged Central American nation, where damage to the transportation and communication infrastructures has slowed communication necessary for relief. For more information, visit the NACEC Hurricane Mitch page, http://www.nacec.org/hurricane-mitch/; tel 888-746-2232; e-mail nacec@nacec.org. Contributions are welcome to "NACEC Operations Fund." Sent donations to NACEC Operations Fund, PO Box 23057, Minneapolis, MN 55423.--NACEC

* New TIS Coordinator: W1AW weekend operator Al Alvareztorres, AA1DO, begins a new position as ARRL Technical Information Service Coordinator on January 4, 1999. Members having technical questions may pose them to Al at 860-594-0214; e-mail tis@arrl.org, or write TIS, ARRL, 225 Main St, Newington, CT 06111.

* ARRL/TAPR site adds DCC highlights: The ARRL and TAPR Digital Communications Conference Web site now includes all recorded segments from the 1998 conference plus a story and photo section. Available at http://www.tapr.org/dcc/, highlights include the keynote address by Dale Hatfield, W0IFO, chief of the FCC's Office of Engineering and Technology; the APRS national symposium; presentations of technical papers; the Packet Radio Users Group of Japan technical seminar, and other sessions. Also find photos and 1998 Proceedings abstracts. The 1999 ARRL/TAPR Digital Communications Conference will be in September in Phoenix.-TAPR

* IDEA establishes scholarship: The Indiana Digital Experimenters Association (IDEA) has established a scholarship through The ARRL Foundation Inc to be awarded during the 1998-99 school year. The IDEA scholarship would go to an Indiana high school senior who is a Technician or higher-class licensee planning to study electronics, communications, or related fields at an accredited Indiana school. Preference is given to academic record, financial need, and demonstrated interested in promoting both the Amateur Radio Service and community service uses of ham radio. For details, contact Mary Robertson, N7IAL, at The ARRL Foundation; e-mail mrobertson@arrl.org; tel 860-594-0230.

* New address for Director Kanode: ARRL Roanoke Division Director John Kanode, N4MM, has a new mailing address, effective January 1, 1999. It's 1741 Old Chapel Rd, Boyce, VA 22620.

* Satellites get OSCAR assignments: Amateur Radio's two newest satellites, SEDSAT-1 and PANSAT, have been assigned OSCAR numbers by AMSAT. SEDSAT-1 now is SEDSAT OSCAR-33 or SO-33, while PANSAT is PANSAT OSCAR-34 or PO-34. Both were launched earlier this fall. AMSAT President Keith Baker, KB1SF, congratulated members of the SEDSAT and PANSAT teams on their success in placing their respective satellites into orbit. The assignment of consecutive OSCAR numbers to new ham radio satellites dates from the launch of OSCAR-1. To qualify for an OSCAR number, the satellite must successfully achieve orbit and one or more transmitters must be successfully activated in the Amateur Radio bands.--AMSAT News Service

* K6MD promoted to Brigadier General: Gerald Griffin MD, K6MD, has been promoted to a Brigadier General in the US Army. Griffin is a member of the ARRL RF Safety Committee, a member and past President of the Northern California DX Club, a DXCC Honor Roll member, and a member and past President of the Monterey Bay Chapter of QCWA. Congratulations!--thanks to Jim Maxwell, W6CF

* K1HT appointed to contest panel: ARRL New England Division Director Tom Frenaye, K1KI, has appointed Dave Hoaglin, K1HT, of Sudbury, Massachusetts, to serve as the New England Division member of the ARRL Contest Advisory Committee. Hoaglin, a member of the Yankee Clipper Contest Club, succeeds

Kurt Pauer, W6PH (ex-W1PH) who served on the CAC for several years. New England Division members may contact Dave Hoaglin at dave_hoaglin@abtassoc.com.--Tom Frenaye, K1KI

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL

cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

6046. Re: What happened to all the old classic CB base antennas?

All of these can still be bought,but I fail to see why you feel they
are so great,especially the beams.I think US law prohibits a certain
size METAL antenna here,but they are imported by the buttload.AB7RS

6053. re: Is it possible to be a "natural" at Morse code?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-25 00:00:00 UTC
From: jherman@diamond.sierra.NET
Message-ID: <Pine.BSF.3.96.981225102850.17145B-100000@diamond.sierra.net>
Source record: 154814

Just as there are prodigies born with natural talents for music, art, languages, and mathematics, surely there must be some with a natural ability for something such as Morse. For the rest of us, learning it was a long (but interesting!) challenge.

The U.S. Coast Guard seemed to have an effective teaching method - they could take a new recruit from 0 to 22 wpm in five months, with just an hour per day of code practice. The remainder of the 4-6 hour day in Radioman school consisted of electronics, repair and maintanence, feedlines, antennas, propagation, RTTY, LL TTY networks, HF and VHF voice, typing, distress communications, and more. For me, it was more like a ham's vacation rather than school!

From the first day, the code characters were sent at 22 wpm, with a much slower overall word speed. After attaining 90% proficiency at a particular rate, the student was bumped up to the next speed. For many of us, we attained the graduation rate of 22 wpm prior to the five-month term. From then on, the pressure was off and we could attempt to pass the 25+ wpm rates, or spend more time on the ball field or in the swimming pool! (A strong swimming ability is a pre-requisite for being in the Guard.)

Passing the 25 wpm rate was highly sought, for no one in the Coast Guard was permitted to use a keyer or bug on the air unless they had attained that speed.

6054. re: What Happened to all the old classic CB antennas?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-25 00:00:00 UTC
From: jherman@diamond.sierra.NET
Message-ID: <Pine.BSF.3.96.981225105812.17145C-100000@diamond.sierra.net>
Source record: 154815

There is no regulation prohibiting you from *building* your own antenna, whether it consists of a simple quarter-wave ground plane, a five-eighths wave vertical, a quad, a phased array of verticals, or a full-sized beam. I use a simply-made vertical dipole for the CB on my sailboat. Works great. (Of course, there is also a VHF marine-band radio aboard - wouldn't leave port without it.)

6055. Use of electronic devices on airplanes

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-25 00:00:00 UTC
From: Joe Schlatter <w4hh@3wave.com>
Message-ID: <1LRg2.6214$8R6.21392@news15.ispnews.com>
Source record: 154816

Elsewhere on this newsgroup is an article in which the author indicates that he will use his scanner any damn place he wants to, including on commercial aircraft.

Let me explain a simple electronics principle that is the reason for prohibiting the use of electronic devices on aircraft. This is the heterodyne principle. It is the basis for how all receivers and transmitters work.

The heterodyne principle states that if you mix together two or more radio frequency signals, the mixing process produces new signals equal to the frequencies of the signals being mixed and equal to the sum and difference of the mixed signals.

Here is an example. Assume that we have an electronic circuit called a mixer. Into one input of the mixer we put a 7 MHz signal; into the other input we put a 10 MHz signal. The output of the mixer will produce four signals:

-- 10 and 7 MHz -- the fundamental input freqs;
-- 3 MHz, the difference between 10 and 7; and,
-- 17 MHz, the sum of the input signals.

Signals will mix together, or heterodyne, in all sorts of environments. Bi-metallic junctions, especially if they are corroded even slightly, make excellent mixers. This is the reason for a lot of interference to television receivers by radio transmitters. The TV antenna has corroded junctions where the cable or twin lead is screwed onto the antenna. That junction forms a diode effect, with copper and aluminum in contact in the presence of moisture. This natural diode serves as a simple diode mixer. The TV antenna is receiving every signal that is in the air -- TV sigs, amateur radio, CB, aircraft, commercial broadcast, anything that is broadcast. All this RF energy is mixing together in these corroded junctions -- natural mixers -- and producing all sorts of sum and difference freqs. In most cases, the heterodyne signals produced are so weak that they cause no problem. In a real-world case that I experienced, a neighbor's TV was getting intermittent interference from my amateur transmitter. But, it happened only at odd times and only when commercial airliners from Dulles International were directly overhead. I did a little investigation and it turned out that, when I was operating on one band, the frequency of my signal mixed with the frequency of transmitters on aircraft. Because the aircraft transmitter was about 8,000 feet line-of-sight from the TV antenna and my antenna was about 200 yards away, the two signals were strong enough to produce a heterodyne on one TV channel. I cleaned up the connections on the TV antenna and solved the problem.

How does your scanner work? Inside the scanner is a frequency-agile oscillator. It produces a zillion or so frequencies at very high speed. These frequencies produced within the scanner are mixed with the incoming received signals to allow the scanner to receive signals over a broad range of frequencies.

Now, what does this have to do with prohibitions on the use of electronic devices on commercial airliners. Almost every single electronic device emits signals. Don't believe it? Put a transistor radio next to your computer, laptop, scanner, graphing calculator. Turn on the device and listen to the hash. That hash is the thousands of frequencies being produced by the electronic switching going on inside your electronic device.

Now, consider this. You are flying along at 30,000 feet with your scanner emitting all sorts of RF signals. In fact, each time it moves to another freq, it emits a different frequency. Somewhere along the line, one of those signals emitted by your scanner (laptop, cell phone, what have you) is going to mix with a signal from one of the aircraft's transmitters or from a strong signal being received from the ground or from a signal coming from some other fool's scanner. The resulting heterodyne is gong to be on the same freq as some of the aircraft guidance system. You figure out the rest.

What are the odds of this happening? That's not the point. The point is to make certain that it does not happen. The way to prevent it is to shut off one source of interference: the emissions from electronic devices.

Comments such as "I'll operate my (scanner, laptop, cell phone, etc., etc.) any damn place I please, even on a commercial airliner" serve only to demonstrate the total ignorance of the commentator.

So, flame this, you idiot.

What is wrong with what goes on 14.3? If you dont like it dont listen to it! I actually ENJOY listening to frequencies like this, because i get to laugh and have fun listening! There are plenty of other frequencies, just because you dont like what goes on here, you gotta cry like a baby, and act like you want the FCC to take care of them..blah blah.

I could either listen to any other frequency, where all hams talk about is the weather, and boring shit, or i can tune into 14.300 and get a good laugh...

When i got my license, i soon realised that most hams are "DORKS" with no life, who get pissed at you if you dont talk a certain way, if you dont act totally gay on a 2 meter repeater for instance, your not wanted. Well its nice that there are frequencies that i can go to and talk about interesting stuff with people that dont care if you dont say the proper "q-code" (even on phone) and dont care so much about the STUPID POINTLESS "rules". They are having fun, they are not bothering anyone...only if you let it bother you by purposely listening to them on those frequencies.

And "sorry", but if you dont like words like "fuck" and "shit" then thats too motherfucking bad! That is only your opinion. You dont have to listen to it if you dont want to. What if i am "offended" by the word "dog", i dont go around crying like a little baby and expect the good old "FCC" to stop it just because "I" dont like it!

And its funny that the fcc does not say anywhere in any rules what exact words you "cant" say. So FUCK OFF and if you dont like it, you have plenty of other frequencies to go to! TOO FUCKING BAD!

Feel free to email me about this crap.

Yesterday night was nifty enuf hearing David (ex-kb2uee) kissing up
to the boneheads on 3950. This morning whilst listening to the annual
14300/14313 xmas day radio sideshow, lo an behold up pops another
longtime RF Clown! Missing for a while but now back, it's Johnnie kc3au!
Yes, the self-appointed preacher to ham radio has returned.
The same polyester suit wearing preacher who wrote and put the various
Stumpjumper music scores & theme songs together, then mailed
tape copies of the same to mental-case hams for them to broadcast
on HF. The same Jim-Bakker-wanabee who's been known to pontificate
for hours on a frequency about righetous radio operations, and yet looks
in another convenient direction when his pals are trashing Part 97.
It's great to see that ham radio's equal to Robert Tilton, Earnest Angely and
Brother Stair (?) has returned to the "RF fold". Give em a hand boys!

6066. Re: tech. license worth doing now?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-25 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.981225161111.227A-100000@Ocean.CAM.ORG>
Source record: 154827

And I'd add that whatever is proposed now may not be implemented exactly
the same way, or at all. That applies to any rule change.

When the licensing was restructured here in Canada about 1990, it went
from two licenses to a multiple mix and match situation. Anyone who held
an amateur license (the first level before the restructuring; the other
was the advanced license) before the new structure was implemented
received full privileges. At the time, I heard from someone who was
teachign code and theory classes that there was an surge shortly before
the new rules, apparently by people wanting to take advantage of the full
privileges that they would soon receive.

That might be a reason to get a higher license now, depending on the exact
proposal in the US. Also, down the road you might like to be able to look
back and remember that you were licensed before the restructuring.

get the license now and enjoy it.

it's going to be a while before everything is digested and new rules are produced. don't wait for a "maybe" when for a couple of hours of your time, you're going to have time to operate well in advance of any changes...

who knows? they might not produce a rule that works in your favor...

From: Bill Newkirk <wnewkirk@iu.net>
Message-ID: <761n24$6nb$1@east42.supernews.com>
Source record: 154831

the cell phone has minimal effect on the aircraft and it's systems.

the cell system on the ground has to deal with a phone that's simultaneously
in dozens of places at once.

the cell radio guys don't like that.

the airphones are a different system.

except for one little tiny oops..

the pilot may not have the authority to make such a decision.

others will have the FARs handy, but it's the aircraft operator (airline)
that calls the shot.

You are correct in you thesis. Too bad you don't check with the respective airlines and find out that over half of them now allow things such as hand held scanners etc. What you don't say is that modern electronics emit lower emmisions and modern avionics are able to reject these signals better. Anyway, Delta allows scanners as do others.

Now that you've bragged about your little scheme in a public newsgroup, your
100% success rate just dropped a few points. I'm sure there will be some
pilots or flight attendants that will be interested, and will be asking you,
"Sir, may I see your Walkman and headphones, please?"

6080. One Sad Christmas

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-25 00:00:00 UTC
From: fmmck@aol.com
Message-ID: <19981224214706.07847.00001142@ng150.aol.com>
Source record: 154882

ONE SAD CHRISTMAS

Yes, Virginia, there WAS a Santa Clause. Reports have been slow to emerge, but here is what I've been able to piece together about his demise.

Do you remember the year when there were stories about Santa's sleigh running over little old ladies? I think there was even a song written about someone's grandmother being done-in that way. Apparently, that year was Santa's last trip. It seems that the reindeer were in an especially foul mood. It didn't help things, when someone started the rumor about Rudolph receiving special treatment just prior to the trip. Needless to say, reports of reckless sleigh driving came from all over the world that year.

That was the year I happened to catch Santa on 20 Meters, as he was returning home from the trip. He was operating as SANTA1, up near the top of the band, trying to unwind after the grueling delivery schedule. He did seem to be a bit grouchy, and complained about rebellious reindeer. We signed off as he arrived home. I happened to leave the receiver on, and noticed that someone had either left their VOX turned on, or sat something on their microphone button. I could hear noises in the background, as if someone tripped and fell down. It was followed by what sounded like hoofs pounding and someone screaming. Then it abruptly ended, as if someone had bumped the microphone and released the button.

In a few seconds, I recovered and put out a call to see what might have happened. After several tries, I heard an excited voice using the call sign, ELF27. He was too excited to say much then. But after about 20 minutes, he came back again. He proceeded to describe what he had found. Santa had apparently slipped or lost his footing, and fallen. Then, he was attacked by the team of 8 reindeer. Once Santa succumbed to the trampling, they turned their wrath toward Rudolph. ELF27 described a scene where body parts were everywhere, with Rudolph's bloody, still glowing nose lying in the gory snow.

ELF27 and I maintained a regular schedule for a long time after that. He kept me informed about the Elves recovering from their grief, and about efforts to find a replacement for Santa.

As you probably realize, most of the world is not aware this happened to Santa at all. One year later, there was a "new" Santa making the annual trip. ELF27 related that one of the other Elves (ELF45) was very good at politics. After the tragedy, he emerged as a natural leader, and had virtually no opposition.

The widow, Mrs. Claus, took a liking to him, and before the year had elapsed, they were married. Now, if you think it odd for a young Elf to go for an elderly widow, you must understand that although Santa was quite old, he had outlived several wives. The widow, Mrs. Claus, was actually quite young and

attractive, so ELF45 had no hesitation.

I haven't talked to ELF27 for some time. In our last QSO, he mentioned that ELF45 had adopted the SANTA1 call sign. He can sometimes be heard at the top end of 20 Meters, late Christmas Eve.

I don't dispute that this would be a terrifying experience for anyone. No one knows the horrors of war better than the veterans who fought it.

However, your comment is a non-sequitur. I don't have a problem with pseudonyms, but I think the point being made is that many are growing tired of a certain few individuals in this newsgroup who hide behind them, and use them as a shield for their flames and trolls.

Welcome to usenet, it appears you haven't ventured much out of the amateur
radio groups? I think you'll find that posting your name and address on
usenet (outside the amateur groups) is about as rare as hook billed
pterodactyls.

6084. Re: Is it possible to be a "natural" at morse code and pick it up in a short time?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-25 00:00:00 UTC
From: Brent <Brent_scott@hotmail.com>
Message-ID: <01be2fcc$508e75e0$0401b8d1@sw-bell>
Source record: 154886

Anyone with average learning ability can easily reach speeds of 11-15 wpm within a few weeks with just 15 minutes per day of practice. Up to twenty in just 6-8 weeks is not unreasonable. One does not have to be a 'natural' to do this. Code is a skill that can be learned by anyone. The reason that people get into a struggle, is because they have been led to believe that it is difficult and they create mental road blocks for themselves.

A similar situation can be seen in student pilots that have been told that learning to land is difficult. They get very nervous on approach and have a more difficult time learning to land well. Students that have not been led to believe that landing is any more difficult than any other aspect of flying learn more quickly and are less tense during their training.

Good self confidence is key to learning situations.

Probably the reason nobody makes base station antennas anymore is because nobody with any real intelligence talks on c.b. anymore. It's 1998, not 1976!

Basically, learning the code just takes patience and practice, as well as on-air practice. If you try to learn the code by counting the individual dits and dahs, you will only drive yourself crazy. I know because this is how I first tried to learn the code when I went for my tech-plus liscense. Needless to say, I failed at it the first time. Today, I am an Advanced class liscense and working on my Extra. Trying learning the code by SOUND, it will be much easier, start slow, then gradually build your speed up. Good Luck!

6088. missing characters - computer <-> TNC ???

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-25 00:00:00 UTC
From: Andre Konstantinov <konstan@worldnet.att.net>
Message-ID: <75vh57$oeb@bgtnsc02.worldnet.att.net>
Source record: 154890
Cross-posted to: rec.radio.amateur.digital.misc,alt.ham-radio.packet,relcom.radio.ham,rec.radio.amateur.misc

Has anyone seen/dealt with a problem with missing characters while running packet?
It looks something like this (in the following example I just did an "L" on my PBBS a
bunch of times):

MSG# ST SIZE TO FROM DATE SUBJECT
1 PY 159 KC0ECJ WA0ZQG 12/24/98 05:33:59 D: B,J,K,L,R,S, or Help >
1 PY 159 KC0ECJ WA0ZQ Rob SNW
1 PY 159 KC0ECJ WA0ZQRob SNW
1 PY 159 KC0ECJ WA0ZQob SNW
1 PY 159 KC0ECJ WA0ZQob SNW
1 PY 159 KC0ECJ WA0ZQG 12/24/98 05:33:59 Rob SNW
1 PY 159 KC0ECJ WA0ZQG 12/24/98 05:33:59 Rob SNW
1 PY 159 KC0ECJ WA0ZQG 12/24/98 05:33:59 Rob SNW

As you see, the lines obviously do not align. The message date and time was swallowed
altogether several times. The problem is in the TNC<-> computer link (b/c this is the PBBS
inside the TNC).

Tried different speeds (2400/4800/9600, settings for both the TNC and the Com port in
Windows 98), also tried Hardware and Xon/Xoff flow. WHAT ELSE?

The setup is as follows:

Kantronics KAM+ (8.2)
ADI AT-201, 5 watts
AMD 5x86/133, Windows 98

Any ideas would be highly appreciated.
Thanks
Andre KC0ECJ

I am certain that it comes easier for some folks than others. With me,
it was a struggle (or so it seemed) but I think tenacity and desire have
a LOT to do with it.

One factor that may figure into it. It seems, to me, that people with a
musical background or musical talent, may have an easier time with it
than those without. Please note, this is my opinion, and a very
unscientific observation.

I see you know how to use callbook/callsign database. However, FYI, I'm an active daily participant in eight other newsgroups, using AOL and another separate ISP altogether. I've been active online in some form or another since 2400 baud was top speed, including usenet for the past five years or so. I know very well what goes on in other newsgroups. None of them have the flaming and trolling that this one does.

>
> Any help would be greatly appreciated!
Alot of people put ferrite beads in all the wiring to help control that.
I'd also look at your antennas. Actually, I've found 85% of rf in the
audio problems to really be antenna or ground/ground loop related. I've
had loads of experience in this area using my picky ic-730 with a home
brew desk mike. The problem always turned out to be antenna related. Rf
in the radio happens because rf is on your feedline. It all starts
there. All other fixes are stopgaps to the real problem. MK

>Anyone know why I would have feedback in my MC-85 mic with a TS-440?

You may want to look into the possibility that there is RF flowing on
the outside of the coax shield braid. How do you test for that?
The easiest thing to do is to assume that you have the problem and if
your antenna is a coax fed dipole and there is no choke balun in the
coax to prevent it, then you've got it - almost a dead certainty.

1) What to do about it? Try ALL of the following:
Use a balun (1:1 current type) right at the feedpoint of the antenna,
OR use a several beads ferrite sleeve type choke - again at the feed
point.

2) At the point where the coax enters the house, bond the outer braid
to an earth rod. There should be an earth rod or several earth rods
all driven into the ground near the point where antennas enter the
shack and any radials that you might be using should be tied to that
stake or group of stakes.

Pay attention to National Electrical Code provisions that relate to
grounding - I won't pretend to advise you on that, there are plenty of
experts on that subject who have posted advice on that topic many
times this year.

Oola! eh mon we found a new radio zoo last night. 3.865 Mhz lsb
There was this 8 station who was as toasted as the guy who plays
music on 3.950 bellowing "OOOOLA OOOOLA" like a cow in heat
for half an hour. Looks like he uses a copper radiator to distill his
West Virginny moonshine. Keep an ear to 3.865 this place is full
of amusing characters and shows promise of joining the 75 Meter
hall of fame "rank"-or.

On another note, a long-gone radio clown made another appearance
on 3950 last night! Babey Huey the ex-kb2uee was greeted warmly
by the resident group of stodgy old white ango-saxon protestant goose
steppers, as it appears that "Euie" has taken a non-liking to wa9kji and
a few of the other communist agitators, who together with the usual
3950 brown shirts, do an excellent job of re-enacting the 1929 Beer Hall
Putsch on an almost nightly circuit. I'm waiting for the cerimonious beer
stained flag to make it's appearance to bless the new troops - it's that
amusing folks.

I think a better matchup would be having both these guys at a hot wing and beer eating contest. Either one or both will die from a massive heart attack halfway thru the event, or their both suffocate each other and half of the attending audience with their incredible flatulance. Perhaps a pro-wrestling WCW Tuesday Night Nitro or whatever else it's called would be cute also! I can see ole Porky dressed up in pink spandex and a mask, and Tick Boy in motor oil stained floppy bib overalls and bare feet stepping into the ring. Now THAT's something I would pay to see.

Using a system called Code Quick I learned the code in 3 evenings. I spent a couple of weeks practicing with my computer running Super Morse then went for the test. I was going to try for the 5 wpm test but as they were running the 20 wpm test I noticed that I was able to copy a lot of it so when the 13 wpm code came I tried it and passed. About a month later I went back and passed the 20 wpm test. I just got really involved in CW and liked it a lot. I guess that's why it was easy for me. I wanted to do it.

I agree with you Michael. I Used Vietnam as an example because it was at
that time relaying became very popular which made many hams go for their
license.

At the age of 13 I began learning Morse. I learned it incorrectly by
listening to a 78rpm record. All I accomplished was to memorize what
was sent track after track. I had to relearn it using the "farnsworth"
method (in modern vernacular). I managed to pass my 5wpm for the Novice.
After getting on the air in June of 1961 I discovered I simply could not
get above 7 or 8wpm. I later found this to be because I really did not
know the code, only had memorized the characters. I solicited help from
some local old timers. I was told to "copy behind". I proceeded to take
this advice and low and behold was able to get over that 8wpm barrier.
To make a long story short, after learning the morse properly I found my
ability to increase speed was just short of amazing. When I sat for my
General in Pittsburg I was solid at 18WPM. This was THREE MONTHS later.
So yes I feel I am a natural. At one point I could copy solid at 55wpm.
Im now probably down to around 45. But with a little practice I can
still peak at 55. How do I get this practice? I CW contest. Morse
code is a real pleasure after 28wpm.

>
> You are correct, Dick. (didn't think I'd ever write that)

Nope, you guys are wrong. Encoding spoken language and music
into binary requires an A/D conversion. Encoding Morse code
into binary does not require any conversion at all. Therefore,
Morse code is binary in nature.

>Curt Breneman
>KC2EBP

You're right on target Carl. This is the whole case in point. Right now as we speak there is a very strong commercial political lobbing campaign attempting to demonstrate to Congress why THEY should be given a large portion of the amateur bands. They (the commercial interests) are just sitting back watching and taping all of this nonsense going on, and along with the FCC as an ally, will use the present amateur behavior as justification for the diminishment of many frequency bands. You have to remember the FCC enforces laws enacted by Congress. Its not the other way around. Congress turns to the FCC for enforcement and advice and the FCC will eventually advise Congress as to the validity of the commercial interests argument.

The FCC would rather deal with commercial interests because they are easier to monitor and the licensing fees generated by their operations result in millions of dollars of annual income to them. Why do you think the FCC doesn't enforce the ham bands like they used to? Because theres no money in it! To top it off these commercial interests have presented the FCC with emergency contingency plans to demonstrate that in the event of a crisis or emergency, they (the commercial interests) would be better trained and more capable to react than the current amateur membership body. In addition, the military is also being lobbied for their approval by the commercial people. If the FCC and the Military tell Congress that emergency and crisis communication would be better served by commercial contingency plans and that the current behavior of certain amateurs is unacceptable, which way do you think Congress will vote?

If this degradation of amateur behavior continues, and if the number of licensees continues to diminish, I guarantee we'll see a reduction of present amateur bands. THATS WHY BEHAVIOR IS SO IMPORTANT! Dont wait till they take these bands away from us to react.

>be? Which one will be easier to find tubes for? Maybe you have something
>similar to offer OR a WARC band beam? AB7RS

Well, the ole DTR1200 uses a single tube which at my last check was running around $600, 3CX1500 me thinks but don't quote me. If you blow the tube your hurting big time, the SB201 is the better deal in my opinon based solely on the tube type used. It's not as much power but remember the difference between 500 watts and 2000 watts is only 6db or about 1 S unit (more or less). 572B's are much cheaper, around $50 or so but its been a while since I've bought any. Additionally, there is much more available in the way of mods, spare parts, etc for the Heath unit. Dentron went out of business around 1983 and made very few of the DTR series amps. About 80% of the repairs of the DTR 1200 were due to a bad tube, many decided not to spend the money due to the high cost.

So there ya go.

Hello Bill & Sarah

By far the best TNC that I have ever used is a Kantronics. If you are looking at running HF and VHF I would go with a Kam +. If you are looking at running just VHF then I would go with a KPC-3 Plus. Have a good day and Happy Holidays.\

Your success will relate directly to your attitude toward your endeavor. If you get bit by the CW bug and actually enjoy it as many of us do, you will spend more time with it and have quicker success. Head copy is the way to faster speeds. The biggest problem for most people in passing the 20wpm is being able to write fast enough to keep up, head copiers will have to try to remember the info. The stress of taking the test can take a few WPM of what you could normally do at home. The multiple choice exams let people squeak by that wouldn't have a chance with a fill in the blank tests. You could try one of the "Magic Trick" CW tapes sold in the back of the magazines. It still all boils down to studying long and hard.
Semi natural CW whiz & VE, Tom

Well, apparently you don't know the FAR's up and down. 14 CFR 91.20 is the governing regulation and is quoted below. It is considerably at variance with your comments. (In simpler terms, you don't have it right).

Sec. 91.21 Portable electronic devices.
(a) Except as provided in paragraph (b) of this section, no person may operate, nor may any operator or pilot in command of an aircraft allow the operation of, any portable electronic device on any of the following U.S.-registered civil aircraft:
(1) Aircraft operated by a holder of an air carrier operating certificate or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.

(b) Paragraph (a) of this section does not apply to--
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by a holder of an air carrier operating certificate or an operating certificate, the determination required by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft.

>The person who has the most control of the aircraft may be the pilot,
>but even he has to listen to the guy on the ground, and the other guy
>at the FAA.

Well, duh. Here's where your remarks get a little odd:

>The FAA is what writes the rules and regs fr air travel, and the FAA
>is very strict. They don't leave this issue up to the pilots at all.

Yes, actually they do exactly that: in 91.20(c) it states that "...the determination may be made by the pilot in command..." This, of course,

refers to non-air-carrier operated aircraft, like the bug smashers you fly. For the air-carrier operated aircraft, 91.20(c) provides that the determination required in 91.20(b)(5) provides that: "the determination required by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used." The operator, of course, is the corporation under whoise operating certificate the aircraft has been placed into service. In point of fact, the FAA is NOT as you state, "very strict" on this issue. Rather for air carriers they leave it up to the carrier (not the pilot) to determine whether a particular device may be used.

>They stipulate "no electronic equipment of any kind (except that
>specific to aircraft operation) shall be used, or have power supplied
>(or applied) to it in any way whatsoever"

Writing your own FAR's are you? There is NO such wording ANYWHERE in the FARs, nothing even close. The entire text of 91.20 is quoted above, and there is no mention of the subject anywhere else in the FARs.

>These same F.A.R.'s also
>give explicit directives on disposition of offenders.

No, actually they don't. The FARs (all of them) are on line at http://www.faa.gov/AVR/AFS/FARS/. Do feel free to search all of them. You won't find ANY explicit directives (or even general ones) for the disposition of violators of 14 CFR 91.20.

>If you want more information, I would suggest that you call your local
>FAA office and inquire about Flight Aviation Regulations.

By all means do so, and they'll get a chuckle out of the fact that a private pilot doesn't know what the regulations which govern his license are called. FAR stands for Federal Aviation Regulations. They are contained in Section 14 of the Combined Federal Regulations (14 CFR). You really, really ought to ask your flight instructor to go over the FARs with you the next time you come due for a biennial flight review.

I noticed that the problem strictly adheres to the following rule:

It manifests itself in any software package which does not do a
split screen operation, i.e. you type in the same screen you receive stuff.
This includes: HyperTerminal (windows), ProComm (Windows), WinPack
running in "Character" mode.

However, if I run a program with split screen, i.e. when you
have a small separate window where you type, no problem.
Such software includes Hostmaster II+, pacterm (the DOS version),
WinPack (in split-screen mode). Note that WinPack
does not operate in Host mode, therefore it is not the mode problem.
Tried Xoff (with corresp. port settings), flow and all parameters
given by DISP A.

Any ideas?

Actually, the FCC has nothing to do with it, insofar as I know. If you're referring to the FARs, see the discussion of 91.20 above. And also, while violation of specific FARs can result in huge fines (civil penalties), you cannot be sent to jail, or even tried for violating a regulation. Regulations do not have the force of criminal law.

>
>So bill, take it from an ex-pilot; if you don't want trouble, don't

Speaking again about that which he knows nothing, "Proudhawk" (a/k/a "The OYEster") babbled forth:

>This will be the first and last time you do
>this.... FAR prohibit the
>use of ANY reciever or electronic >equipment on board an aircraft,
>except that which is designated for aircraft >use only.

Is that so, OYEster? Please explain to me how it is that I was on a plane as recently as yesterday...and the in-flight video specifically stated that portable tape players, CD players, and computers are ALL PERMITTED once the aircraft reaches the proper altitude. How is this possible when OYE BOY says differently? Better call and have them revise their policies immediately!

>Doing what CBDimbulb proposes will not >only get you kicked off the
>aircraft, but also arrested for unlawful use of >restricted electronics
>on board an aircraft and endangerment (as >such electronic devices will
>generate their own signals, thus interfering >with flight instruments).

Would you please provide one such example of an individual actually being arrested and "kicked off the aircraft" as you claim?

>You won't be given 2 chances here. You will >be asked once, then the
>flight crew will confiscate the next time you >are seen with the

Dear Dan/W4NTI

What I meant by "certain rules of conduct" covers two main areas: The first is the section in Part 97 referring to the prohibition of obscenity and music transmission. The second part is related to my statement concerning the perpetuation of amateur radio. When we get licensed, we must take responsibility for our on-air behavior so that it doesn't degrade and eventually destroy our cherished hobby.

Curt Breneman

airlines can make their own rules for some things.

it's just that they don't want anything even potentially able to mess around
with navigation during ascent and descent phases of flight.

But then the pilot's supposed to follow the airline's rules or he's in
trouble.

GPS is around, but it's only working its way to the top of the heap.
VOR/DME/ILS still do the workhorse jobs, and ADF ain't dead yet.

>can do unexpected things to the front end of the navcom receiver, not
>to mention other odd effects to other on board systems.

heck, there have been VHF comms that meet the specs that can tear up GPS
receivers.

>Also, as posted elsewhere on this subject, the FCC has stipulated that
>the use of a cellular phone aloft (as in aircraft) is strictly
>prohibited. Violation of the specific rules can lead to huge fines and

the reason for that was in my reply -- cell radio counts on limited range
from the users and being in an aircraft breaks that rule.

some folks think anything with a number pad is some form of telephone.

of course, how much trouble will it be to get your phone reactivated when the cell guys kill the account because your simultaneous presence in many cells make it look like you've been cloned big time?

then they kill your access to prevent theft of service.

things like Airfone are dying as satcom takes over anyway (more capacity, more quality, more cost effective)

I never said they did. I said they might be interested in knowing the information you posted. After all, airlines are always looking for ways to improve safety and security. Forwarding your post to some airline e-mail addresses would be appropriate.

6158. Kill The KillFile!

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-26 00:00:00 UTC
From: n0vfp@aol.com
Message-ID: <19981226162005.01141.00002018@ng-cg1.aol.com>
Source record: 154801

This is a new feature of many NewsGroup readers.
In this short article, I will unveil some secrets on how to do it!

1. Most Killfiles use a wildcard Character. The user puts in a string of Characters and the newsreader scans through all the Newsgroups messages, that's good,

but, what if the subject was: 3950 or Liberty Net

The newsreader will filter out all messages with "3950" in the header. But now I will show you a fool-proof way to get past the "Kill file" and get your message to those intended for.

3950 = 3@50 39%0 3#9#50 or 39#50 3-9-5-0
Liberty Net = L####erty N%t or L@berty N&t or L-i-b-e-r-t-y N-e-t

or so on, only use a differnt random charecter each time. This will confuse the filer and will allow the message to appear. This is leagal and has been used with great success.

Now, lets talk about authors. Some killfiles also allow the user to filter out certain authors.

1. If you are a AOL user, you have up 5 different screen names. Change names to confuse the filter.

2. If you have ISP and use programs as "Outlook Express" change the name of the author in the "Accout info" on the Newsgroup settings

3. Deja News. This is a great way to confuse the filters. You can choose any name and also, you can use a "Hotmail" account as well. You can use 2 names on each Deja News account.

I will post this stuff on a Website soon, I hope those with Killfiles will realize that there filters are doomed to fail!

Ever see those news vans with the 60 foot tower they can push a button and it deploys? Perhaps you could use one of those mounted in a dediacated space towards one side of the portable home. Beam antennas, or the apex of wire dipoles could be attached when the mast is deployed a few feet; then raised to full height when required.

Load the articles in comp.dcom.modems, and you'll see ten percent of them
are about CRC errors in Win98. Win98 causes dropped characters. If what I
read in c.d.m is right, no fix is in sight.

So is QST. And they are continuing to shrink as the ham market
declines and advertising dollars dry up to pay for the pages.
The January QST is the thinnest it has been in years, and I
predict the February issue will be even thinner. You may see
some columns disappear. It takes four pages of ads to pay
for one page of editorial matter. Margins on ham gear have
gone through the floor due to lackluster demand and the fall
of the yen, so the money to pay for ads is drying up. That's
hurting all the ham magazines.

I work in the American Airlines avionics (aircraft electronics) shop
in Tulsa. In general, most consumer and amateur electronics will not
interfere with most communications or navigation equipment aboard modern
aircraft. Note that I said "most" equipment. In some instances, we
have found interference between amateur radio transmissions and specific
DME units. My HT caused a DME about 50 feet away to go haywire. I have
heard that the main reason most airlines forbid transmitters goes back
to a incident where a crew realized they were miles off course, although
their instruments read true. When all the personal electronic devices
were turned off, the instruments indicated the off course condition.
This was written up in the ATA news a few years ago. Pilots never make
mistakes, of course, so it had to be all those electronic devices out
back. But the one thing to remember is that pilots are GOD up there.
If they tell you not to use your scanner or HT, don't use it. Ignoring
instructions from the flight crew, and that includes the flight attendants,
is a federal offense. We read the agent's reports and they indicate
that the flight crew doesn't often have local police meet a flight,
but it does happen. By all means, ask the pilot if you can use your
radio, but please abide by his instructions........Ed

Message-ID: <21d099ae.36847392@aol.com>
Source record: 154839

In a message dated 98-12-25 06:56:30 EST, Hugh Mass wrote:

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
Just wondering if anyone could share experience with learning Morse code where they were able to pick it up in no time flat and acceled to 15 or 20wpm within just a few weeks.
>>

Hugh:

20 WPM in a few weeks is asking a lot. I guess it could be done, but most peoples' lives don't permit the dedication required to get trier code speed to that level in such a short time span. Most people ask what is the best method for learning CW AT ALL. That is one of those questions that if you ask 20 people, you will get 20 answers. I don't think there is ONE method that works equally well for everyone.

When I was studying for my Novice ticket, I would study CW (from an ARRL tape) for about an hour--hour and a half each day, but broken up into several segments. 15 minutes in the morning, 20 minutes after work, 20 minutes after dinner, 20 minutes before bed, plus a copy of the tape to listen to while driving. After 6 weeks, I passed my 5 WPM and Novice written test, and a few weeks later got my Novice ticket (KA8TOW) in the mail. A little over a year later I passed the 13 WPM CW, General written, and Advanced written in one sitting. I wish I had tried for the Extra, as I could solid copy 20 WPM, could carry on a conversation at 25, dabbled with 30, and got some of 35.

Getting on the air is a great way to increase your code speed. Just kick back, and shoot the breeze with the guys, using CW. I liked having my Saturday and Sunday morning coffee with a group of guys in New England and the Atlantic Seaboard states using CW on 80 meters.

W1AW code practice is also a great way to work on your code speed. They have slow and fast code practice runs. Slow code includes 5, 7-1/2, 10, 13, and 15 WPM. Fast code includes 10, 13, 15, 20, 25, 30, and 35 WPM. See QST or the ARRL web sight for more info.

My suggestion, Hugh, is get your Tech Plus, get on CW, and have fun with it.

6170. 440 repeater questions

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-26 00:00:00 UTC
From: robpeterson@SPAMMEiname.com
Message-ID: <368472bc.53438410@news.flash.net>
Source record: 154840

I'm in the Houston TX area and just for fun, I've been trying to see
if I can get my little ICQ7 radio to work someone on a 440 MHz
repeater (I've never listened on that band before). I found a list of
repeaters but it doesn't say whether the offset is + or - 5MHz. Is it
the same for all of them? If so, up or down? If I could find a
repeaterito listen to(and they seem to be rare) I would eventually
find one that
1) was close enough to hit and
2) happen to be on the right offset and
3) I happen to have the right sub audible tone set.

So far I've failed.

Anyhow, can anyone help ?

Thanks, Rob W5VAH

Not so.

The pilot can not authorize anything that Federal Law, or the Airline (his employer) prohibits. If you believe differently, I invite you to cite your references.

Use of personal electronic devices aboard aircraft are governed by the Federal Air Regulations (FARs). Additionally, use of Cell Phones aloft is specifically prohibited by FCC regulations.

YaesuTom and others,

I'm a little perplexed about your reaction to recent suggestions that
people who break the law should actually be held accountable for their
actions. Why even make rules, if it's ok for people to ignore them if
they're "boring"? While you make get some thrills by listening to the
chaos on 14,300 etc, its important that we all think about the bigger
picture. Do we want the world to think that US hams = Jerry Springer
Show guests? It's one thing to have this sort of thing going on within

a closed medium (like a chat room or a discussion group), but quite another for it to be broadcast far and wide. If this sort of activity goes unchecked, it will mean the end of our hobby. What do you think will happen if it appears to the lawmakers that the amateur band allocations are international embarassments? It should be obvious that the only reason we can partake in our hobby is that there is just enough positive public sentiment and political support to keep it going. Your attitude is not helping anything in a positive way. I'd stand by your side if you are taking a stand for free speech, but that argument doesn't hold water here -- we all agree to follow certain rules of conduct in exchange for being able to "work the world". That is a privilege, not a right. And - privileges can be revoked.

I really don't give a flying fuck who wants to talk to Iraq, Libya, Syria, Somalia, Iran, Lebanon, or any other country the U.S. has had problems with. I would imagine if you lived in a country being bombed by the U.S. though, you probably wouldn't be too eager to talk to a U.S. amateur, but hey, what the hell do I know. I do know that during the Gulf War, the FCC at one time told U.S. amateurs not to talk to Kuwaiti amateurs because they thought old Sadaam might be listening. I guess it adds a whole new factor to the QSO when you consider the person on the other end might be killed if they are found to be talking to the enemy.

Hi, does anyone know which jumpers do what on a philips prm80 30 logic board? I have programmed one for voting but it doesn't want to vote. The solder jumpers on the board have been modified to enable other functions so its possible that this has effected voting.
Any assistance would be appreciated.
Paul.

In doing some research for my website. I contacted several of the manufactures (Cushcraft) (Antenna Specialists). They both informed me that they cannot sell vertical metal antennas of a certain size for CB use in the U.S.. You may find imported antennas for sale but the American companies are very careful about the liability. Both manufactures were aware of the growing number of CB collectors who would like to reconstruct a vintage station, but their only recommendation was to seek out the commerical grade antenna. A commerical grade Ringo costs between $120 & $220, their are two versions & wind speed specs.

Hey Curt,

You were on a good role there until the part about "we all agree to follow certain rules of conduct in exchange for being able to work the world". Would you please instruct me where to find that in part 97 please. And please don't refere me to "good amateur conduct". That is entirely to vague.

Hi All,
I would be very happy if somebody can supply me the schematic diagram and other tech data for
Braun TTV-1270 144/432 MHz transverter. Info was published in QST July 71, pg. 52-53.
I am ready to buy this unit for reasonable price. If you like to make me Christmas gift, I'll pay for the delivery.
Merry Xmas/Happy New Year!

6187. SURVEY - PLEASE STOP BY

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-26 00:00:00 UTC
From: Keith Henderson <kt4vq@vartel.com>
Message-ID: <762tlo$6dr$1@news-2.news.gte.net>
Source record: 154857

We have had wonderful success with our ICOM 706 users group page and thought that we would take a survey to see if there is some other useful topics that we could create a site for. The idea is for the site to be used for that topic only. By doing this you can narrow your focus to the subject that is of interest to you and not have to read all of the general and unrelated subjects. Thanks for your time!

if the repeater output freq is between 440.0 - 444.975 MHz, the input
would be 5 MHz higher.
as far as I know ALL repeaters here in Texas are coordinated that way

>they were able to pick it up in no time flat and acceled to 15 or 20wpm
>within
>just a few weeks.

Hugh:
I echo what Bob (KD8WU) says. There is no "magic bullet". In the military, it took about five months to get folks from zero to 20 WPM--with regular classes and with learning code being their "full time" job.

It takes some time, but it is fun. It's also worth the effort. The CW bands are a great place to meet fine folks. There's almost no cussin' cuz it's too much trouble to spell out all that junk! Ha Ha.

>Dave Heil 5H3US, K8MN

I agree with Dave with one exception, there is a lot of activity that your not nessisarily going to 'hear' by scanning around with a VHF reciever or one for HF commonly referred to as a Short Wave reciever.

As a licensed amateur Bill, you'll be able to build your own equipment and operate it on the air, many build from scratch using very simple construction techniques. A simple transmitter and reciever can be built for very little, some kits are available for around $50 to $100. You can run Fast Scan TV (like the commercial TV you watch), you can run digital modes, receive and send messages via satellites by tracking them with a computer and pointing your antennas at them, many different versions of Radio Teletype, Pactor, Amtor. There are contests where you can compete by making as many contacts as you can in a given time period. You can experiment with low power 1 or 2 watts, many try to see how far they can go with 100mw or less. Some run very high power and bounce thier signal off the moon! Others will operate only during meteor showers and reflect their signals off of the ionized trail of a meteor.

There are direction finding contests where you try and locate a hidden transmitter, awards for working all states, countries, counties etc. My point here is that there is so much to do in the world of amateur radio that you'll likely miss if your just scanning around listening to conversations on the air. There is much much more below the surface. I hope you decide to join us.

SB DX @ WW $OPDX.389
Ohio/Penn DX Bulletin No. 389

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 389
BID: $OPDX.389
December 28, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1VV, NA2M, WB2RAJ/WB2YQH & The 59(9) DXReport, WB3JFS, N4XP, W4VQ, K6RIM, WA6KBL, K8YSE, K9MIF, CT3HF, DJ5AV & DX News Letter, DF6EX, DL6UAA, G4BUE & DX News Sheet, LU1DZ, PA0JR, PS7AB, PY1KS and RA1QHJ for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy New Year". Also, we would like thank the many who have contributed information over the year (there are too many to list). REMEMBER, without them there would not be an OPDX Bulletin.

EDITORIAL: "Quick Summary of 1998 for DXers" and "Are they REALLY DXers?"
To speak frankly about DXing, "It was a very good year" (sorry for the pun "Old Blues Eyes"). DXing in 1998 had to be one of the most interesting and most active in the last several years. DXers saw a change in the ARRL DXCC program.
Some rules were changed or modified which brought about new language terms and new countries (GEEE... I mean "new entities"). Due to changes, three new entites were added to the DXCC List: Austral Islands (FO0), Marquesas Island (FO0) and Temotu Province (H40). These three new entities were quite active throughout year by individuals and groups. To add to the excitement of the new entities, the 10 meters band became quite active this year. The band that has been quite silent for the last several years has awakened many dormant DXers. And just think, the fun has just began on this band.
Also in 1998, we saw some rare an inactive entities hit the bands. In May we saw an excellent operation from St. Brandon (3B7) hit the air waves. Probably the most noted operations took place in the last quarter of the year. It was good to see Eritrea (E3) on the air after a very long absence, hopefully this one will not go silent again. It was also good to hear Myanmar (XZ) on the air, this time during good conditions with very strong siganls. Another operation which kept DXers busy for a month was the

activity by the two French operators from Amsterdam Island (FT5Z). Yes, "1998 Was a very good year for DXers".
However, there were some bad times, too. It seems major DXpeditions still got haunted by so called individuals who insist on calling out of turn, jamming and interferring with these operations. "Are they REALLY DXers?" I orginally was not going to write about this, but due to the discussions that took place at the December NODXA meeting, I decided otherwise. A concerned NODXA member approached the club on this issue and felt that something should be done. He mentioned that he heard a few individuals state that they were fed up with ham radio and that they were leaving the hobby. My answer to them is: "DON'T GIVE UP! REMEMBER WHAT YOU ARE!" There is really no way to stop these individuals other than to "IGNORE THEM". They are NOT REALLY DXers. These individuals probably do not belong to any organization (e.g. ARRL, DX association) and could care less about working the DX station. Their main goal in life is to aggravate you and the situations that are taking place (huge pile ups). These individuals enjoy the large audience and will do anything to set off a chain reaction of disgruntled DXers. Let them do their thing and "IGNORE THEM". Hopefully they will leave. REMEMBER: You are a DXer. A person who is SKILLED, PATIENT and a KNOWLEDGEABLE member of a DX community. These are qualities that can not be found in jammers...etc..

10 METER BEACON ACTIVE AGAIN. The Ushuaia Radio Club (LU8XW) has again activated the LU4XS beacon. A report states that the beacon has been working since December 8th. The location of the beacon is on Tierra del Fuego Island. The beacon is on 28190 kHz using 5 watts output into an inverted VEE.

5X, UGANDA. Peter, ON6TT/5X1T, has returned back from his one month's Hurrican Mitch emergency telecom mission for the UN to Central America. He mentions that his part of the mission is now over. "This mission was hectic to say the least", states Peter. In one month, Peter took 27 flights and never spent more than 3 days in a row in one particular country (Nicaragua, Honduras, Guatemala and El Salvador). During the many days, the UN telecom teams were up from 4 A.M. and went to bed at midnight. So his ham activity was limited to about one hour from every country. Peter states, "No fancy stuff, just a quick breather to say HI on the ham bands." Peter is now home, on holiday in Belgium for one month after which he will be travelling back to his base in Kampala.

6Y, JAMAICA. The "DX News Letter" reports that Gerd, DL7VOG, will be on the air until January 8th. Activity will be on CW/RTTY on 80-10 meters using his IC-706 and a vertical.

C9, MOZAMBIQUE. Jon, 3DA0CA, says he will be in Mozambique and active as C91CO now until January 8th. No QSN have been reported.

CE9, SOUTH SHETLAND ISLANDS. Jeremy is active from a Chilean base on Livingston Island in the South Shetland Islands. Jeremy is a non-ham, but is learning about amateur radio as he goes along. His primary function is to place phone patches. Once phone patches are taken care of he will provide QSOs. He can be found at 0100z, 0200z or 0300z around

14270 kHz with K4MZU who helps provide the patches. Please QSL per Jeremy's instructions.

DX NET TO MOVE. The Brazilian DX Net will return to its original band, 10 meters, in 1999. Starting January 2nd, look for the net on 28430 kHz every Saturday/Sunday at 1200-1400z.

ET, ETHIOPIA. ET3BN and ET3AA have been quite active over the past few weeks. ET3BN was heard on 24892 khz at 1412z and 28528 kHz at 1400z. ET3AA was heard on 28520 kHz at 1430z, and also check 15 meters around the same time.

FT5ZH, AMSTERDAM ISLAND DXPEDITION. If you are not an OPDX InterNet Subscriber you missed the final press release bulletin by Jeffrey/WA6KBL and Gil/F5NOD stating that the operators on Amsterdam Island had to QRT earlier than planned because of a serious storm approaching the island. They were asked to take down the antennas because it would be impossible to take them down in the high winds. Their ship was to arrive approximately Thursday the 24th depending on the weather and the seas. In the press release they stated, "The DXpedition was not just a success; it was beyond expectations. They made more than 32000 QSOs in the log with just two operators and no backup for shifts. No equipment failed." They want to assure everyone that the logs will be analyzed when the operators return to Lyon in the beginning of January. Also, there will be a log search page on the FT5ZH InterNet site. If you did not work them, there is still hope for you. A young French soldier will be stationed there for a year. He was just licensed 3 weeks ago and he is authorized to transmit from Amsterdam Island with the call FT5ZJ. He will not be on very much, and certainly not for pileups, but this is a chance for you.

JD, OGASAWARA ISLAND. Look for JI1FLB/JD1 to be active between December 30th and January 3rd. QSL via homecall.

KH2, GUAM. The "DX News Sheet" reports that Gus, K4SXT, who is active for two years as KH2/K4SXT from Nimitz Hill, (650 ft ASL), has been working Western Europe on 160 meters (at 2030z, on 1824 kHz). OPDX has found that Gus has been working stateside stations between 1145 and 1245z. QSL direct.

NEW CLUB OFFICIALS FOR 1999. At its November meeting, the Redwood Empire DX Association (Petaluma, CA) elected the following individuals to serve during 1999: President - Al Burnham, K6RIM; Vice President - Wally Pugh, N6AD; Secy/Treas. - Bill Hillendahl, KH6GJV; Director - Joe Berkman, W6AIR; Director - Rick Reiner, K6ZWB; and Director Chuck Ternes, N6OJ. Continuing as Editor of "Sunspots," the newsletter of REDXA, is Steve Bertsch, WA6YFD.

P.A.M. DXPEDITION '99. Mart, DL6UAA, informs OPDX that "The Paradise on Air Mission 1999 (For friendship around the world.) is being planned for next year. From his Web site (http://www.qsl.net/dl6uaa/), he states that for the first time the "Paradise on Air Mission" will be not a single operator activity. Jacky/3B8CF and Mart/DL6UAA will be active together on Mauritius and Rodriguez Island. The callsigns will be 3B8/DL6UAA and

3B9/3B8CF, but special callsign for 3B8 and 3B9 are being applied for. Mart states that the duration of stay (Rodriguez Island) is dependent on the success of another DXpedition starting in January, 1999, which still is not confirmed. This is not correct because the other DXpedition team (Midway Kure DX Foundation) has announced that they will begin an operation on March 25th. He also states that their operation will start in March, 1999. Mart will stay for 2-3 weeks on Mauritius Island and with Jacky, 1-2 weeks are reserved for Rodriguez Island. More details can be obtained on Mart's Web site or send E-mail to Mart's InterNet address at: DL6UAA@t-online.de

POSSIBLE DELETION IN THE WORKS??? Headlines in Saturday's "The Plain Dealer" read "Russian, Belarus leaders discuss merging countries". Vladimir Isachenkov reports that "The presidents of Russia and Belarus agreed... to take steps to merge the two former Soviet republics into a single state as early as next year..... the merge would be put to a public vote.... The presidents said they would move early next year to introduce a single currency and harmonize taxes - without waiting for popular approval for merger.... Top Russian officials said there is no immediate plan to merge the two nation's armed forces or pool the government coffers...." The article does mention that there is opposition to the merger......

QSL INFO AND NEWS......
Fred, DF6EX, reports that a new freeware version of "Windows QSL Manager" is available for downloading from his Web site. This software package includes 5000 entries of QSL informations. This information was collected during 1998. The file can be downloaded from the Web page: http://www.qrz.com/df6ex You can also download the file directly from: http://www.qrz.com/df6ex/files/FREE.ZIP

Whitey, K1VV, reports to us that he continues to receive QSL cards for EP2EXX. This is a PIRATE and K1VV is NOT the QSL Manager.

It was reported to OPDX that the station PA6PCH/PCH which was active in the Farewell QSO Party of Scheveningen Radio/PCH was a great success. More than 2500 QSOs were made during the 24 hours of activity. Many ex-radio officers took the opportunity to say good-bye to the oldest coastal station. The station will close down on December 31st, at 1500 z after 94 years of maritime radio service. It is emphasized that no QSLs should be sent to PA6PCH or PCH. All contacts will be confirmed automatically via the QSL bureau. SWLs and amateurs who do/cannot use the service of a QSL bureau can send a SAE and at least 1 USD (green stamp) to cover airmail postage, to: PA0JY, Mr. K. Lagerberg, Langemaad 2, NL-1991EG Velserbroek, The Netherlands. More information can also be found at the following Web site: http://www.vrza.org/pch.htm

A group of CT3s (CT3CD,CT3HF and CT3KN) active in the last ARRL 10 Meters Contest as CQ9T state to QSL this callsign via CS3MAD at A.R.R.M., P.O.Box 4694, 9058 Funchal Codex, Madeira Island, PORTUGAL or via the Bureau.

Gene Ege, WB2LCH, has announced that he is no longer the QSL Manager for any station. He is QRT from ham radio. He still gets hundreds of cards for DX stations that stopped sending him their logs and compensation.

It has been reported that OX3SA has a new address. The new address is: Sven Lutzen, P.O. Box 504, DK-3920 QAQORTOQ, Greenland

Requests for QSLs from all Dateline DX Association operations [KH9 (Feb 98), ZK1XXP (97), AL7EL/KH9 (96)] should now be sent to: Tom Harrell, N4XP, 2011 New High Shoals Road, Watkinsville, Georgia USA 30677. This includes bureau requests. The WA4YBV route is no longer being used, however all cards sent earlier are being forwarded. Any inquiries are to be directed to Tom's E-maill address: n4xp@juno.com

Nick, RA1QQ, has started mailing QSL cards for his last expedition RA1QQ/1 to IOTA EU-082, 161, 160 (in East Russian Arctic). He has started to prepare for his new expedition to EU-102 (summer, 1999). Any type of sponsors and hams who want to enter the team are welcome. Contact's can be made through RA1QHJ via E-Mail at: albert@metacom.ru

PT5, MARIA FRANCISCA ISLAND. The PT5T team will activate IOTA SA-026 (DIB 067) during January 22-31st. Activity will be CW/SSB on 80-10 meters. QSL via PP5LL.

PT9, BRAZIL. Ben, PY1QN, will activate the special prefix PT9/PY1QN between December 31st and January 7th. He will be active from 3 different cities in the "Mato Grosso Do Sul State" (Bodoquena, Dourados and Amanmbai City). Activity will be only CW on 10/15/20/40/80 meters. QSL via Bureau or direct to PY1QN, Ruben, Rua Araponga, 341, Rio de Janeiro- RJ, 21720-940 Brazil.

VK9, COCOS ISLAND. Hide, JM1LJS, is now active as VK9CL. His activity will be on 80-10 meters. His operations will last until January 2nd. Over the past weekend, he was heard on 7008 kHz at 1428z working JA stations.

VP2M, MONTSERRAT. Fred, DF2SS, will be active now until January 8th as VP2MHJ. His activity will be on CW/SSB/RTTY/Pactor on 160-10 meters using only a 100 watts and a 50 ft. vertical. Over the past weekend, Fred was very active on the 30/17/12 meters along with activity on 160/80/40 meters. QSL via DL2MDZ.

VQ9QM QRT FOR NOW. The latest word from friends of Dale, W4QM, is that he is on the way from VQ9 to the Persian Gulf (He may be there now.). They also mention that Dale cannot operate aboard the ship. He will, however, be back later at VQ9 to operate.

XU7, CAMBODIA. A station signing XU7AAN was active over the past weekend on 15 and 40 meters CW. Check 7004 kHz around 1345 and between 2130 and 0000z. Also, check 21011 kHz around 2345 and as late as 0015z.

ZS7, ANTARCTICA. Bud, ZS7B, is working with the South African Antarctic division from a research ship placing beacon buoys from the Antarctic coastline to South Sandwich Islands. His QSOs as ZS7B will not count towards WABA but only WASA. He is active after 0100z around 14195 kHz. His length of stay is not known. QSL via ZS1B.

Basically such a device would be illegal today, as it comes under the heading of devices that facilitate monitoring cell phone transmission that were banned a couple of years back. You could, however, build one yourself; the details of which will beleft to you.

Dear CoreDump,

I agree that it would be very unusual for a pilot to invoke his command authority to allow something that would be a potential hazard to safe flight. My post was simply a reply to a thread that seemed to suggest that pilots were strictly bound to a specific set of rules under all circumstances. I think that there are two main reasons for the "under 10,000 ft" prohibition of even approved electronic devices as well as the general restriction of untested or unsafe RF emitters. While inertial guidance is used in flight (sometimes with spread-spectrum 1.5 gHz GPS backup)is relatively resistant to RF interference, the VOR and ILS systems work on discrete frequencies in the VHF and low UHF range. This is particularly important for the landing phase of the flight, since commercial air carriers are normally on IFR flight plans, they often use the ILS localizer (108 - 110 mHz) and glideslope (300 mHz) signals for sole terminal guidance. These signals may be easily distorted by digital "hash" and RF modulation harmonics since they appear at the aircraft as two sets of independent time-resolved signal pulses as the horizontal and vertical guidance signals sweep past the aircraft location. In each case, the difference in time between an omnidirectional pulse and the swept beam arrival is used to define the aircraft's position relative to the runway touchdown area. You can imagine what might happen if additional "pulses" showed up during the landing sequence.

The other issue concerning the prohibition of in-flight use of cellular phones is not some evil marketing tactic..... It's a simple matter of physics. The cellular (and PCS) system is designed in such a way that

no more than six (and usually fewer) cell nodes are in contact with any one phone. The power levels and power-scaling features of cellular-type phones are designed to assure that this is the case. When a phone is airborne, a great many cells receive identification signals from the same phone, and it can truly affect system performance. Yes, it can be done in an emergency, and I know of at least three cases where cellular phones were used to establish communications with an ATC Center when avionics had failed. There are (interestingly) more cases where private pilots have used cellular phones to announce their arrival while still in the landing process, became distracted, and never lived to tell the story (ref. Flying Magazine - "Aftermath" feature).

Approved aeronautical phones use a different system with much more widely spaced cells, and use a digital time-sharing system for voice encoding multiple channels simultaneously.

There is no conspiracy.

Dan

I guess that what I'm really advocating is self-censorship in order to prevent society and government from feeling the need to impose censorship. What do we really lose if we practice self-control? Maybe some instant gratification, but not much of substance. With freedom comes responsibility.

Dick Plourde writes:

Sorry Cecil but that's not exactly correct...
Morse Code is not binary per se because it is comprised of the following
FIVE (at least) states...

Dit = 1 ON
Dah = 3 ON
space between elements = 1 OFF
space between characters = 3 OFF
space between words = 7 OFF

units is length of time.

This points to the fact that the encoding is in the time domain and when it is on the written page time is not yet encoded. Now, in order to transmit or send the Morse Code over radio or telegraph that would be called CW or OOK respectively. These two modes (CW and OOK) are BINARY. When we encode the Morse Code or even Farnsworth modified Morse Code it is encoded in the time domain. The Analog to Digital (A/D) Conversion and conversely the Digital to Analog Conversion (DAC) is done in the time domain. What is NOT happening is performing DAC or A/D conversions in the voltage domain.

Morse Code (and ASCII) is NOT binary. Morse Code could be expressed in binary (as could my age) but we all know my age is not binary! :-)

One more point on the discussion of encoding in the time domain. Try not to think of it as encoding dit's and dah's and long and short rests between but the encoding is in the transitions from off/on and on/off and that is where the digital encoding is happening. The time between off/on and on/off and the converse is what contains the information in CW or OOK.

Morse Code and ASCII are NOT binary.
CW and OOK ARE binary.

Morse code is binary in nature.

Cecil, Gary and others-

Is this just semantics? What about considering the difference between
"digital" and "binary"?

Binary is just the number of states, whether you call them zero and one or mark
and space. Morse code isn't digital, since there are no values other than mark
and space, to be represented in a digital manor. It obviously is binary,
though.

You could run Morse code through an A-to-D converter. Then it wouldn't be
Morse code, it would be digitally encoded Morse code, and would have little
value. What would be of value, would be the alpha-numeric characters contained
in a Morse code message, being digitally encoded. This might be called
"teletype" or "packet".

HELP!!!!!

I know I ran across someone on one of the newsgroups who has a manual for one of these beasts, and like a ninny, misplaced the contact. If there is anyone out there who has a manual for a Uniden ARU 251K UHF repeater, please let me know. I'd be interested in the loan-to-copy-pertinent-schematics program, with maybe some guarantee money and your cost of mailing thrown in. Whatever works. We can talk...

Probably a good option. But have you priced these? I about fell over when
I had to price one for work for a commo van. I think the least expensive
were
in the $5K range, but that has been a few years ago, the prices may have
gone down some....

In article <3682f922.84277544@news.uswest.net>,
proudhawk@uswest.net (Hawke) writes:
|> OH YEAH!
|> This will be the first and last time you do this.... FAR prohibit the
|> use of ANY reciever or electronic equipment on board an aircraft,
|> except that which is designated for aircraft use only.
|>

Unless the FARs have changed in the last 5 years, this is NOT true. The FARs require that all navigational equipment be certified, not just anything on board.

The specific FAR here is 91.19:

"91.19 Portable Electronic Devices
(a) Except as provided in paragraph (b) of this section, no person may operator, nor may any operator or pilot in command of an aircraft allow the operation of, any portable electronic device on any of the following U.S. registered civil aircraft:
(1) Aircraft operated by an air carrier or commercial operator; or
(2) Any other aircraft while is is operating under IFR.
(b) Paragraph (a) of this section does not apply to:
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart Pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by an air carrier or commercial operator, the determination required by paragraph (b) (5) of this section shall be made by the air carrier or commercial operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft."

Hence, it is the AIRLINE which actually decides what can/cannot be used - the Feds just give them that right, but do not expressly prohibit ANYTHING. The ban of in-flight use off Cellular phones is actually a part of the Cellular regulations which specify a maximum altitude AGL of use, otherwise the phone can hit multiple cells and cause system interference.

This explains the variation in on-board useage that I have seen. American and many others will not allow a cellphone to be used on-board, even on the ground. Continental will allow them until the door is closed for push-back. American crews appear to be totally oblivious to the regs here when I have asked why the difference and claim that Continental cannot legally do that. Bottom line: The crews parrot company policy, and very few (cabin personnell, at least) have any

idea what is actually in the regulations.

And, as a last point, with the way the regulations are written, even if you came on board with a FAA certified radio, they would still not be obligated to let you use it!

g'day,
it depends on a few things, but some 8030 boards never had a voting
capable chip on the board... i'd need to see it to be able to tell you if it
has one or not... i have successfully modified a non voting board to do
voting before in the past to a few radios, so it is possible, but there are
a few little mods that have to be done, and it's not the easiest thing to
do, as it requires removal of one sma chip, and fitting of another.

Has anyone Tested, used, or have an ADI AT-600? If so Is it any good?
Please let me know Goods and Bads about it. I want to get another HT and the
AT-600hp may be it, but I don't know yet. How does it compare To, the Icom
W32A?
Anything would help THANKS.

THAT'S ONE MORSE STATE - DIT

:> Dah = 3 ON

:equals a logic 'one' for three bit times

THAT'S A SECOND MORSE STATE - DAH

:> space between elements = 1 OFF

:equals a logic 'zero' for one bit time

THAT'S A THIRD MORSE STATE - OFF(SHORT)

:> space between characters = 3 OFF

:equals a logic 'zero' for three bit times

THAT'S A FOURTH MORSE STATE - OFF(NORMAL)

:> space between words = 7 OFF

:equals a logic 'zero' for seven bit times

THAT'S A FIFTH MORSE STATE - OFF(LONG)

:> units is length of time.

:units is the number of binary bit timings

SEMANTICS, THERE IS FIVE STATES TO MORSE CODE WHICH MEANS IT IS NOT
BINARY!!!

BINARY MEANS TWO STATES I.E....
ONE - ZERO
TRUE - FALSE
YES - NO
ON - OFF
MARK - SPACE
CW ON - CW OFF
KEY ON - KEY OFF
CECIL CORRECT - CECIL INCORRECT :-)

CW AND OOK ARE TRUE BINARY (ONE BIT CAN DESCRIBE THEIR STATE)!

MORSE CODE AND ASCII CODE (AS MY AGE) CAN BE REPRESENTED IN BINARY BUT IT TAKES MORE THAN ONE BIT TO REPRESENT THEM HENCE THEY ARE NOT BINARY (MORE THAN TWO STATES)!

:> The Analog to Digital (A/D) Conversion and conversely the Digital to
:> Analog Conversion (DAC) is done in the time domain.

:But 1, 3, and 7 are *NOT* analog. ï¿½ and 1 are not analog.

TIME IS THE ANALOG! 1, 3, AND 7 ARE HOW TIME IS DIGITIZED TO REPRESENT MORSE CODE!

:> Morse Code could be expressed in
:> binary (as could my age) but we all know my age is not binary! :-)

:Of course your age is binary. Binary is just a way of representing any
:number and applies equally well to all numbers.

OF COURSE MY AGE IS NOT BINARY IT ISN'T EVEN DIGITAL IT'S ANALOG IT CAN BE COARSELY REPRESENTED IN BINARY BUT YOU KNOW AS WELL AS I DO THAT MY AGE IS NOT BINARY (IT TAKES MORE THAN 1 BIT TO DESCRIBE IT)!

I QUOTE FROM THE HOLY BOOK "THE ARRL HANDBOOK - 1992" CHAPTER 8: VERSE 2...

In binary digital systems there are two descrete states, represented in base-2 arithmetic by the numerals 0 and 1.

:Take a look at the Morse to ASCII to Baudot conversion table in the
:ARRL Handbook - nothing but ones and zeros.

Yes and all those ones and zeros carry more than binary information by virtue of their position on the page! Are they in the 2 position or the 16 position or the 32 position. What are their values? If you don't know their values you don't have enough INFORMATION! Those tables are binary representations of values that are NOT binary!

The Anti-Coder Profile:

Years of observation reveal any one or combination of the
following:

1. A CB'er (or "freebander"), or has affinity for CB.

2. Almost always a political liberal.

3. Has some buddies on CB and wants to get them over to the
Ham bands.

4. Wants to get the spouse or kids onto the Ham bands to
"communicate."

5. Obtained his Ham license by fraudulent means (he couldn't
or wouldn't pass the CW test, so he resorted to bribery).

6. Has pecuniary interest in changing Ham radio (running a
book publishing, club, or license-mill money-making racket).

7. A welfare parasite or freeloader who wants everything for
nothing.

8. Considers any performance qualifications or standards to be
"unfair" and unbearable personal persecution.

This is the biggest bunch of crap I have seen in a while.
1) I havn't used a CB in years, and when I did it's because it is what
was used at my local BSA Scout camp.
2) I'm a moderate conservative, registerd Republican.
3) I always try to get people I know intersted in Ham radio, that has
nothing to do with CW
4) I have no spouse or kids.
5) I passed all the tests I have taken with 100%
The above three are moot points since there is a no code license
available
6) I run none of the afore mentioned and have no interest in any.
7) You narrow minded pig...
8) Wrong, I am all in favor of performance evaluations.

I also however recognize CW for what it is. An old, out dated and mostly unecessary icon of the past. I agree with the ARRL that it needs to be put in it's place. Not totally removed, but removed from the state of opulance that it once was. And it is seen as a turnoff for a lot of mid aged people. The no code tech lic added more people to the ranks than anything done in the past or since.

Just MHO...

Folks,

As a private pilot, I've carefully studied the FAR's and have consulted several FAA FSDO's, and they all say that a pilot may violate any FAA rules necessary to safely operate the aircraft. If this course of action is taken, the pilot will probably have to justify the action at a later time, however.

Hi,
Well, I'm giving it up in lieu of a new computer....

NEVER MOBILE

Yaesu FT900AT
auto freq. tracking tuner built in
modded for MARS/CAP
all the normal base model stuff....
no scratches or dents, works great!
Purchased new in 1995 from AES, (I even have the reciept.. over $1300!!)
Radio, manual, hand mike, box, papers to include factory mods, etc...
factory filters
Priced at $775, uship, No trades, please....
Please reply via EMAIL
Picture emailed on request and this one will have to be prepay, so
references available, too, from these groups even!
thanks for the time and space,
Randy, KC8CPK

Hi,

I have a couple gp300 uhf 2ch radios I'd like to trade for ht600's...
prefer the 6ch. units but will take a 2...
gp's are in decent shape... one ok, with scratches and some wear, ($220) the
other a bit rougher to include scratches and a chip... ($200) rx/tx fine on
them... any interest?
or sell for $410/both, uship.
please email!
thanks,
Randy

Hello DJL

I think its a matter of motivation. The motivation for many potential licensees to learn CW is not prevalent. This lack of motivation is keeping many good people from the hobby. Why take the time to learn something that you both hate and will never use. I dispised code 20 years ago and I still dispised using it.

I think the requirement for understanding how a CW transmitter works (just like Packet and RTTY) should be required however the actual code itself is a moot point if one hasn't any intention of utilizing it. You dont see any questions on a Ham exam about knowing by memory Binary and ASCII code for Packet operation do you? This is left for the Amateur to explore and learn on his own if he is interested however the operation of the Packet system is required on the exam. CAW should be the same way.....

--

Some people look at what is and ask why.....

> KC2EBP
>
Curt,

Disregard my previous post asking for specific paragraphs in 97.113. I
have no problem about the music part. What I have a problem with is the
defination of obscenity. The fact is that this is a very vague part of the
rules. Who defines obscene? Who defines what is offensive or what is not.
The courts can't even decide this. I'm not saying that we as hams should
not be aware that people of young age are listening. However if you ever
listen to talk radio and TV it's all over the place. For that matter go to
a high school and listen around. See my point? According to the law and
what I see in the FCC rule book please read and try and understand this.

OBSCENITY:(1)An average person, applying contemporary community
standards, must find that the material, as a whole,
appeals to the prurient interest.
(2)The material must depict or describe, in a patently
offensive way, sexual conduct specifically defined
by the applicable state law; and
(3)The material, taken as a whole, must lack serious
literary, artistic, political, or scientific value.

INDECENCY: Language or material that depicts or describes, in
terms patently offensive as measured by contemporary
community standards for the broadcast medium, sexual
or excretory activities or organs.

I have a serious problem with the government telling it's citizens what they can or cannot say. This is one big bag of worm's. This should get a nice discussion going. hi hi

>read in c.d.m is right, no fix is in sight.

Win98 is indeed known to give problems with COM port overrun errors
causing dropped characters. However, there are a few other things you
can check:-

Does the COM port used with the TNC have a 16550 UART? If it doesn't
then you may find yourself battling against the problem of overrun
errors with both Win98 and Win95. It it has a 16550, is it enabled in
the COM port properties in Device Manager?

Some video cards are notorious for causing comms problems in Windows.
(Matrox Millennium cards are one example, but the latest drivers fix the
problem.) Try reducing the screen resolution and colour depth to the
lowest available, or even temporarily forcing the card to use the
standard VGA drivers. If that helps, then look for updated drivers for
the card.

Finally, a frequent symptom of the Win98 problem is that it tends to get
worse the longer the PC has been booted. So see if the performance of
the PC is better immediately after being booted, and gets worse after it
has been used for a good few hours.

6240. Ham Radio - Why Bother?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-27 00:00:00 UTC
From: William Holden <weholden@att.net>
Message-ID: <765isl$5d6@bgtnsc03.worldnet.att.net>
Source record: 154710

I've been following various ham newsgroups for a while, trying to decide if I want to get involved in this hobby. I've learned a lot.

The apparent purpose of ham radio is to shout your political opinions at as many people as possible. These people, in response, attack the originator of the opinion, and then attack each other. Just like a shark feeding frenzy.

Rather than confining their jamming activities to the radio waves, hams now have the newsgroups to spam. A double hobby - spammin' & jammin'.

There is a lot of whining about the decline in technical expertise / intelligence / manners / etc. What are you doing to correct these problems?

I hope this newsgroup represents only a small vocal fraction of the ham radio world. I was looking for an interesting technical hobby, not an rude, arrogant and elitist club.

The FAA currently prohibits the use of personal cellular telephones on commercial air carriers while in IFR (Instrument Flight Rules) flight. This does not apply to the phones permanently installed in commercial air carriers as they are operated on known fixed frequencies that have been determined not to interfere with the safety of flight.

Some info for your reading pleasure:

http://www.bts.gov/ntl/DOCS/91-21_1.html

and...

[FAR] Sec. 91.21 Portable electronic devices.
(a) Except as provided in paragraph (b) of this section, no person may operate, nor may any operator or pilot in command of an aircraft allow the operation of, any portable electronic device on any of the following U.S.-registered civil aircraft:
(1) Aircraft operated by a holder of an air carrier operating certificate or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.
(b) Paragraph (a) of this section does not apply to--
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by a holder of an air carrier

operating certificate or an operating certificate, the determination required by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft.

Hello:

A few years ago, Grove Enterprises offered a device for scanners which could only receive up to 512 Mhz to reach 800 Mhz by having you tune to 400 Mhz and the device would double the frequency.

Now, I would be interested in something like this, but to have the frequency doubled anywhere I wanted - say if I tune to 100 Mhz, receiving 200 Mhz traffic, etc.

Or even dividing the frequency - I'm listening at 400 Mhz, and want to hear 200 Mhz activity.

Any help hear?

Thanks in advance.

Anything that is only two states, i.e. either a logic 'zero' or a
logic 'one' at any single chosen time is binary. That includes Morse code.
When you see a character written down such as A = .- there is understood
an independent dimension of time and that makes it serial *and* binary.

```
_ ___
A = | |_| |___ Time is along the 'y' axis. The 'x' axis has *only* two
```

states, i.e. it is a binary code. This is also true for serial ASCII.

Bill if you take a look at this group, you'll see that 80% of the posts come from 20 or 30 users, a far cry from representing ham radio nationally. There are many Mail lists that discuss a wide variety of topics from VLF (very low frequency) operation, to microwaves and space communications. The reason mail lists are more popular is it allows the person who maintains the list to delete the spam and garbage posts you see here.

If you base you decision to join ham radio based on commentary found in this .misc newsgroup your short changing yourself big time. I'd be happy to answer any questions you might have about the hobby.

Those tables are serial binary representations of values that
can have only two states, i.e. the definition of binary.
All those binary bits do not exist at the same time in use.

The local Borders hasn't had 73 since the September issue. In fact, QST
hasn't been there for awhile. The only radio-related magazines I've seen there
are CQ and Popular Communications.

Bill,

It's actually an attempt, by us who are already hams, to keep the ham population to about what it is now. We can scare off many by our words and deeds on and off the air but not all.

If we get you to refrain from becoming a ham then our ploy worked. If you do become a ham, please feel free to join us...you are most welcomed.

Bill,

The purpose of internet newsgroups is for the bickering and bitching.
Actually, you'll find quite little of it on the amateur bands compared
to here. I suggest getting a receiver and listening to some amateurs on
the air before making up your mind about whether to plunge in or not.

Bill, I think you will find about the same fraction of folks with personality and other disorders in ham radio as you will in any other group. At least I can't tell any real difference.

A change from days past (I think) is that communication over long distances is now very cheap and ham radio doesn't have the aura of necessity/usefulness that it once did. Heck, here in Texas they still issue amateur radio call plates for personal cars, a throwback from a time when not all the cops had radios in their vehicles.

Greetings,

I am interested in learning about HAM / Amateur Radio, and would like to know if there are any clubs in Portland Maine area that could get me started.

Also would like to know if there are any programs to teach morse that is freeware on the net. (Seen a couple in CQ magazine for sale and recommendations for these would be appreciated.)

Thanks in advance! Can e-mail me at zephyr@psouth.net.

:> MORSE CODE AND ASCII CODE (AS MY AGE) CAN BE REPRESENTED IN BINARY BUT IT
:> TAKES MORE THAN ONE BIT TO REPRESENT THEM HENCE THEY ARE NOT BINARY (MORE
:> THAN TWO STATES)!

W6RCecilA wrote in message <3686552A.356F@ibm.net>...

:Anything that is only two states, i.e. either a logic 'zero' or a
:logic 'one' at any single chosen time is binary. That includes Morse code.
:When you see a character written down such as A = .- there is understood
:an independent dimension of time and that makes it serial *and* binary.

MORSE CODE HAS FIVES STATES.

No wonder the people like Steve have hissy fits and resorts to ad hominum
attacks when they're discussing things with you. You're thick!

:A = | |_| |___ Time is along the 'y' axis. The 'x' axis has *only* two
:
:states, i.e. it is a binary code. This is also true for serial ASCII.

The 'it' your talking about is OOK or CW and it has two states. There is
more information in how long it has been low or high and with that extra
information you or I could decode one of the FIVE STATES of MORSE CODE!!!

Cecil, when they model the earth's weather pattern on a computer you would
tell me that the earth's weather is binary.

I suppose you would even tell me that your ladder line is binary.

I have asked no questions. I do not require an answer. Do not post again!
This argument has ended!

Thats Baloney! The government requires a person get an amateur license and once that person applies for one they're agreeing to play by the governments rules. Once one possesses an Amateur License, one cant say the government doesn't have the right to define obscene because the license itself is a privilege granted to a person by the government. Possession of an amateur license is not a constitutional right. Its a right given to individuals who agree to play by the FCC's rules. For those who believe that radio transmission and its use thereof is "free speech", thats fine, however if they apply for a license they are hippocrites because one cant say that they will follow all the rules to acquire a license and at the same time condemn those very rules because transmission is their constitutional right.

If you wanted to sell me anything, you'd have to disclose your identity
and couldn't play anonymous smartass, Drew. You could have explained to
a man interested in becoming a radio amateur what enticement brought you
to it or what you find particularly satisfying about it. You took the
low road instead.

If I know of a frequency which is haunted by lids bent on jamming and
the spewing of mindless filth, why would I go anywhere near it?

I don't know of any jammers, never heard of it until I got here. But I'm not a
DXer.

> There is a lot of whining about the decline in technical expertise /
> intelligence / manners / etc. What are you doing to correct these problems?

I have to agree there. All the Hams I know are pretty technical, but most of
them really aren't interested in learning code.

6275. Missing characters from TNC to COMPUTER - SOLVED? (kinda)

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-27 00:00:00 UTC
From: Andre Konstantinov <konstan@worldnet.att.net>
Message-ID: <76661n$2f8@bgtnsc02.worldnet.att.net>
Source record: 154745
Cross-posted to: rec.radio.amateur.digital.misc,alt.ham-radio.packet,relcom.radio.ham,rec.radio.amateur.misc

The problem has indeed been in Windows 98. As my computer is dedicated to packet I don't care what's on it and therefore putting 95 back was not a problem.

If you have a similar problem with your PC<->TNC disappearing characters and you are running 98 chances are putting 95 back on will fix it for good.

Once again, special "ataboy" to Microsoft.

That's pretty stupid considering Ham Oprerators are a highly endangered species, and everyday we get closer to the threat of losing bandwith to the commercial interests.

Better check again, Jim,

The FCC currently 'specifically' prohibits use of personal cellular
telephones on ANY aircraft while in Flight PERIOD. Check with your
nearest FCC office.

The FARs don't 'specifically' address Cell phone use at all, other than
they're included in FAR Sec. 91.21.

Curt,

I don't dispute your statement, however I find it hard (very hard) to rationalize a situation where the PIC of a commercial airliner would violate this particular FAR and call it " necessary to safely operate the aircraft", except in the 'very' rare case where all aircraft communications were lost, at which point there are specific procedures to follow and he's not likelyl to be asking passengers for help. :-).

Hi Bill,
Please don't base your opinion on these newsgroups, they are but a SMALL fraction of the ham population. People in general like to bitch and moan, that goes for just about any subject matter. You'll find kooks everywhere. There are a VERY few frequencies in ham radio that seem to attract the nutcases, there are a few on 80 meters, 20m and some repeaters but in general most hams are VERY friendly, helpful people. I suggest you listen a bit and see for yourself. Don't let the smart asses bother you, there are only a few of them. Ham radio is a VERY fun and VERY interesting hobby that I think you would enjoy. Check into it, go to http://www.arrl.org and learn more if you haven't done so already.

Good luck!

Tom

Here you go Patrick! also there is a program called SUPERMORSE that works VERY well. Do a web search for it, I can't recall the sites that have it but a web search will bring up the URLs.

Good luck!

Tom

ARRL makes getting started in ham radio easy. New and prospective hams may call 1-800-32-NEW HAM (800-326-3942).]

HOW TO GET STARTED IN AMATEUR RADIO

Getting started in Amateur Radio has never been easier! You can usually find a ham radio class in your area sponsored by friendly volunteers who will help you learn the "ropes."

Two Entry-Level Licenses To Choose From

The Novice Class license lets you talk by radio using voice, Morse code or computers. You'll take a relatively easy exam on radio operating practices, FCC rules and basic electrical theory. You'll also pass a 5 words-per-minute Morse code test. Novice Class operating privileges include FM voice, digital packet, single-sideband voice and Morse code. Novice operators can use many of the popular shortwave frequencies (below 30 Megahertz) to communicate worldwide using Morse code, and on one shortwave frequency band they can even use voice.

The Technician Class license NO LONGER REQUIRES A MORSE CODE EXAMINATION, and gives you all ham radio privileges above 30

Megahertz. You'll pass a relatively easy exam on radio operating practices, FCC rules and basic electrical theory. Technician Class operating privileges include FM voice, digital packet, satellite, television, single-sideband voice and several other interesting modes. You can make international radio contacts via satellites, using relatively simple equipment.

Where Do I Start?

The American Radio Relay League (ARRL) and others publish ham radio license study guides to help you learn the things you'll need to pass your exam and have fun with Amateur Radio. ARRL can also assist you in finding ham operators in your area who'd like to help you get started.

The ARRL Educational Activities Department (EAD) distributes a "Prospective Ham Package" that is sent at no cost to you. The material describes Amateur Radio, popular ARRL study guides, and includes a list of your local ham radio clubs, ham radio classes and volunteer examiners in your area. Contact us for a "Prospective Ham Package", today!:

TOLL-FREE -- 1-800-32-NEW HAM (our New Prospect "Hot Line")
mail -- ARRL EAD, 225 Main St, Newington CT 06111
phone -- (203) 666-1541
fax -- (203) 665-7531
e-mail -- pbudnik@arrl.org

(Make sure to include a specific request for the "Prospective Ham Package" and include your postal address because there is too much material to send via e-mail or fax.)

Added Notes from KB2SMS:

Radio Shack (as well as ham radio stores of coarse!) sells the EXCELLENT ARRL book called "Now your talking" which will teach you everything you need to know to get your Technician class license.

Call the toll free number above to get the "Prospective ham package" however.

Visit the ARRL web site at http://www.arrl.org for more info as well.

That is pretty much what I am saying. And there can still be certain areas of the bands reserved for code only, and certain added rights that would come with knowing code. Some of the kids I know are intrigued by communicating by way of code, many are not.

Dan/W4NTI

I agree that definitions of free speech activities are inherently dangerous, since they tend to contain some form of censorship. On the other hand, isn't it better to err on the side of decency whenever there is a question? It's true that various forms of political protest require actions beyond those normally seen in polite society, but I don't think that amateur radio is an appropriate medium for this activity either. Let's preserve our hobby by making it appealing to the "average person" you referred to in your definition of obscenity.

Dear Jones,

If we grant your argument, then what measures would you propose in order to keep Amateur Radio from following the 11m band down the slippery slope to utter X-rated chaos and toilet-humor anarchy? Traditionally, ham radio has been occupied by a group of polite, well-informed people interested in learning more about radio and sharing their knowledge with newcomers. How do we prevent a small group of miscreants from spoiling things for the rest of us? It's relatively easy to walk away from annoying and obnoxious people in everyday life, but they have much more "reach" when they're jamming repeaters, playing music or generally QRMing the HF bands. The only way to "walk away" under those circumstances is to turn off the radio. If most decent hams do this, it effectively destroys the hobby. To me, that's not a viable option. I'm simply asking that people think about the consequences of their actions, and consider the bigger picture. We need effective enforcement as well as a modicum of self control in order to exercise the hobby we all paid good money to enjoy.

Hi people,
Does anyone know how or where to get the mods for the Sangean ats 606a
SW radio??? I know there are a few but dont know where to find them.
The one I am interested in is the tuning mod that does Not mute the
audio during scan . May thanks. E-mail is fine. 73's AA3PX

A modicum of self control is not necessary if people agree to follow the rules that they once pledged they would. Curt, your reference to 11 meters is a moot point. 11 meter behavior is the same if not better than it was 25 years ago. In the early 70's CB was a literal zoo. There was a ground plane on every roof-top and a linear to go with it. At that time I recall certain hams using your same 11 meter comparison as the future destiny of amateur radio however it never happened. The difference between then and now is the crybaby attitude some radio operators possess when they cant get their way, the result of which is jamming. Years ago if someone disagreed with you, they dealt with it in a mature manner.

The hobby hasn't changed, just the people in it have changed.

28 Dec. 1998 January's Chilly Meteors - The 1999 Quadrantids

One of the year's most intense meteor showers, the Quadrantids,
begins tonight. The shower stretches from Dec. 28 through Jan. 7
with a sharp maximum on Jan. 3, 1999. The Quadrantids are the
only major annual meteor shower whose source, presumably a comet
or an asteroid, remains unknown. Readers are invited to observe
the upcoming shower and to submit their data for analysis by
scientists studying the structure and origin of the Quadrantid
meteoroid stream.

>2-Meter, vs. quite a bit on freqs below 20mhz!! ...

I've been a ham operator for 33 years and an SWL for longer.
(Actually, I prefer SWLing and scanning to talking
to other hams on the air.)

Like you, I hadn't heard much cursing on 2m -- that is, until
I visited California (near Hollywood). There was
plenty of bad cursing and poor hamming there -- and that was
15 years ago!

2m range is very local and HF is world wide.
On HF, cursing and bigoted comments are heard a long way.
Nonetheless, it's deplorable and more prevalent now than ever.

There are two factors at work:

(1) Ham radio is influenced by social trends.
The cursing and nastiness are not restricted to the ham bands.
It's also on BCB, FM, TV, movies, "talk radio" etc. (i.e., it's
a hallmark of today's culture).

(2) The FCC virtually stopped enforcing the ham radio
rules 'n regs a few years ago.

Happy monitoring!

they're plain text, usually in the form of a QSO..

use all the letters, all the numbers and comma, period, slash, question mark, AR, SK, and BT once at the minimum.

that's about it. don't forget the 6 Vs at the front and the SK or AR at the end.

Hello Donnie:

I personally and professionally agree with you. The problem is is that these individuals have gotten on the "free speech" bandwagon and they truly believe they are right when in fact they are wrong. All I want them to do is not to be hypocritical and play by the rules that they originally agreed to just like I do. There will always be people that I disagree with however that shouldn't and doesn't give me the right to use vulgar behavior.

Many of these operators dont remember a time when the bands were enforced. When I got my ticket, if I didn't identify myself as per the rules every ten minutes, or if I forgot to, another ham would publicly give me hell, and it was humiliating. I once was on 28.305 and the party I was talking to along with myself eventually drifted below 28.300 (the radios weren't the best back then) after a period of time. You'd of thought that we committed a capital crime. A local ARRL rep and 5 or 6 other operators ripped into us like you wouldn't believe. The FCC didn't have to enforce the rules because the majority of the operators did.
Oh well enough said I guess.

73's to you and yours and have a Happy New Year!

Does anybody out there in Radio land have a copy of a Cushman CE-6
Service manual that they would be willing to part with or copy for me.
Gladly cover all costs and shipping. Thanks Don KB6GQA

One of the dumbest questions or a troll. You can not operate with out a
license of some kind. It may take the FCC months or never to change things.
Go ahead and get what ever you can pass and get on the air.

Hello W. Cook:

It all depends on how motivated you are to start with the hobby. If you'd like to start now, take the test now. The testing isn't going to be much easier even if it is eventually changed. If you're not in a hurry to begin, wait it out to see what the requirements will be. I would think that one would want to get it over with as quickly as possible because the changes might not occur for at least a year (or so I am told). And, the old saying "The devil you know is better than than one you dont" may hold true.

Good Luck and 73's

--

Some people look at what is and ask why.....
Other people look at what isn't and ask why not.....

Bill, in all fairness to hams everywhere, you cannot stereotype.

Hams come in all shades and colors: from technical enthusiasts to CW zealots, from moon bounce to satellite, from slow scan TV to single sideband, from brotherhood to the crucible of controversy, from justice to injustice.

Yes, hams are a pluralistic bunch who have the liberty to be themselves. What the license does give you is spectrum, invaluable spectrum, the legacy of tradition sparked haphazardly in the 1920's. Many of us have lived a good percentage of that history to see changes in technology and society.

As part and parcel of progress, ham radio can be no more responsible for its constiuency's behavior than the government can, for its citizenry.

I bemoan the negative too. Yet no one can stand in the way of societal evolution nor take responsibility for it. We can only take and give the best during life's short tenure.

Wildcat wrote
> there is no constitutional right
>guaranteeing that a person can do or say anything they want on the radio
>regardless of the free speech issue.

Agreed. There are many exceptions. The best known one is yelling fire in a theater. I've always felt that discussing sex, religion, or politics on the radio is in bad taste. But I don't think the government can regulate this. I believe that profanity is prohibited in the regulations, but I doubt that the FCC would prevail in a prosecution. There are libel and slander laws that you can use if you have the bucks for a lawyer, but I sure wouldn't waste my time on one. The best way to treat boorish people is to ignore them, not prosecute them. If the government gets in the *content* door, then next year it may not like what you're saying...

>If we grant your argument, then what measures would you propose in order
>to keep Amateur Radio from following the 11m band down the slippery
>slope to utter X-rated chaos and toilet-humor anarchy?

I have no answer on how to make grown people behave civilly but I repeat:
government control of *content* is not the answer.

>Traditionally,
>ham radio has been occupied by a group of polite, well-informed people
>interested in learning more about radio and sharing their knowledge with
>newcomers.

For the most part it still is. 99% of the QSO's I hear are hams having good
clean fun. Fortunately most of the lids park on a few frequencies leaving
the rest clear.

>they have much more
>"reach" when they're jamming repeaters, playing music or generally
>QRMing the HF bands.

Intentional interference, playing music, ect. are violations of the law and
should be prosecuted. This has nothing to do with the free speech issue.

>We need effective enforcement as well
>as a modicum of self control in order to exercise the hobby we all paid
>good money to enjoy.
>Curt Breneman
>KC2EBP

Self control is like manners. You either have them or you don't. If their
mothers failed to teach them, I don't think you or I will be able to do
much...

Ni There,

I got a TRX with a broken 2SC380Y.
These transistors are not common here. Anyone knows of a compatible western type?
Is seems to be in use solely as a switching transistor, to enable the CW key when the rig
is in CW mode.

73,

Rob, PA3AXI

My father-in-law has the ICOM IC R-7000 for sale. He has the original box and papers. It is in excellent condition, under 40hrs of listening time.

Here is a brief description:
Speech was added, adapter for 12 volt use, delay feature, scan rate feature, memory scan, lock-out channels, range is 30mhz-2ghz, picks up am/fm, narrow/wide band, 800 mhz full coverage.

If you need any other information. I'll try to find out from him, please let me know. ASKING PRICE IS $900.
We're located in South Florida

RE: PRO-2021 REMOTE SWITCH QUESTION

OK, I admit it. I AM LAZY!

I enjoying listening to my PRO-2021 scanner while laying in bed late at night. The problem is that when something interesting comes on, I have to turn and reach my arm out from under my warm blanket to hit the MANUAL button to stay on the frequency. The same thing happens when I want to hit the SCAN button to continue scanning! In my laziness, I was thinking about how nice it would be if I had some sort of a remote switch with buttons for MONITOR and SCAN. That way I could just lay there nice and warm and comfortable and control my scanner.

Has anyone thought of that? Has anyone done it? How hard would it be? What are the problems that might result? I would appreciate your comments.

(Next I'll want a way to see the screen without turning my head!)

I simply dont know the answer. But my opinion is any form of censorship should not be condoned. As for preserving ham radio. Forget it. As long as society continues on it's self destructive spiral into self delusion then I see no hope for it, or us in general.

Take a plain, white piece of standard 8 1/2" by 11" paper, and put a solid black dot on it the size of a dime. Now, show the paper to different people. Ask them what they see. Most people will say that they see the black dot, although you might get a few (very few) here and there that say they a white piece of paper, or a rectangular piece of paper. Even though the white area on the paper has a higher ratio than the black area (meaning the dot) of better than 300 to 1, most will see the black dot right away.

There are two ways to look at this:

1. The paper represents ham radio. The black dot represents everything that is bad about ham radio. Even though it's small, it's the first thing you notice. Your attention is immediately drawn to it.

2. The black dot represents all that is interesting about ham radio. It's small in comparison to the rest of the paper, which is plain, blank, and uninteresting. Even so, our attention is still drawn to it.

The question is, what do *you* see?

The radio is a TS 530 and uses 120V AC. I wish I could run it directly off
of 12 volts.

Hello to all !

I have a Sony ICF-SW55 World Band Receiver.
Is here someone that can provide me the schematic diagram for the Italian
and
the American versions (or only the American) ?

Also, can someone tell me how to enable the continuous coverage on all
frequencies on the italian model that have many frequencies locked ?

Thank you !

Mario Boldetti

P.S. Please, answer me by email at mabold@tin.it

6326. Re: An Observation of 14.300mhz

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-28 00:00:00 UTC
From: Wildcat <wildcat@tp.net>
Message-ID: <87Mh2.566$P52.3418@news15.ispnews.com>
Source record: 154640

Now it now sounds like you're both kidding yourselves. There is no true freedom of speech when anyone agrees to be bound by rules and regulations in order to acquire a ham license. If a person has a ticket, they are agreeing to have a "limited" amount of free speech on the radio. Those limitations ARE imposed by the government. One cant flash their call sign on the airwaves (or on a newsgroup) and expect to be taken seriously when complaining about their infringement of "free speech" because there isn't any such thing. The free speech limitations you possess are the free speech limitations you agreed to when you signed your license application.

At least the Free Radio guys are much more forthright in their beliefs. "They" believe that they can do or say anything on the airwaves because no-one owns the airwaves and the amateur license itself is an infringement on their rights. Whether you agree with them or not, they are very clear however they aren't going out and getting their tickets ands then complaining about their lack of "free speech" rights.

<<Does anyone make plans to build a remote control-head for the TS-50? The signals from the front panel to the Digital board look straight forward, but I wouldn't know where to begin if I were to interface through the computer port instead. Anybody know of a project like this?>>

I read an article, where a small palmtop computer was used for remote control of a mobile rig. at $150 used or surplus, not a bad deal.

As I see the computer control rigs, you need the right digital signal to make functions work.
A simple potentiometer will not work, anymore. Unless, you can program a small microcontroler w/ the operating system & interface software, I think your out of luck on the "Homebrew" means of interface.

HOWEVER, whichever way you go, I'll try to help as much as possible.

Ummm, you mention laptops.
Ummm, everytime I get on an airplane I see laptops running all over the place.
I'm taking a 747 to South Africa within the next couple of weeks, I bet there about 200 laptops that will be running the whole flight (except for takeoff and landing of course).

Hello and thanks for reading.

We're working on a simple piece of logging software.

We've heard of a standard format in which contest logs can be send to
the organisation of a contest.

We want to incorporate this idea in our program. Can anyone tell me or
point me in the direction of this standard format?

Thanks.

kl0kw@hotmail.com wrote
>Does anyone make plans to build a remote control-head for the TS-50?

I run mobile with the TS-50 remoted but without seeing the frequency readout. The rig is under the seat. I simply emulated the programmable microphone buttons on a small control box. (But you could as well just use the mike buttons.) That allows me to tune up and down and zero any station I wish to talk to. I programmed the rig scanner to the band limits which keeps me in the band. In operation I scan until I hear someone I want to talk to, zero him, and then start the contact. Or scan to a clear frequency and call CQ. I don't need to know the frequency because the pre-programmed scanner keeps me in the band. If you need to be on a particular frequency, say for a sked, you could set one of the programmable buttons to switch to a channel programmed to that frequency. You can operate this setup without taking your eyes off the road. (There are many variations you can do with this system that may give you an idea for doing what you want.)

When mobile, Besides the safety of not having to look at the rig when driving, I also like to hide the TS50 for both security and more room. Even though the rig is under the front seat, I leave a few dummy plugs hanging out of the ash tray for when I park. Hopefully the thief will see my antenna, look in the car, and believe the rig is unplugged and removed...

Government regulations that are unconstitutional cannot legally be enforced, even if you agreed to them. The constitution doesn't necessarily determine what's constitional, the guys in the robes do. In our present social and political climate I don't think you will see the FCC rushing in to be the thought police. While this may allow some to be somewhat unpleasant to hear on the bands, I still think less government regulation of *content* is to be desired...

please reply to:daburroughs@hotmail.com

A non-ham, avid SWL/scanner geek's observations:

I monitor both 2-Meter (Pro-64 scanner) and HF. Despite the fact that
2-Meter is a younger
(below 50) crowd, there has never been ANY cursing, abuse, jamming on
2-Meter, vs. quite a bit
on freqs below 20mhz!! Maybe this is just my area (central Maryland) It
certainly doesn't match
the no code = undisciplined scumbag stuff some here hold to. I think these
guys stick with
no code because the guys on 2-Meter seem to be having a ball already!

By the way, there is no 6-Meter here, ever?? Why?? Not much 10-meter
either. 2-Meter is PACKED!! Never heard ANYBODY on GMRS/FRS freqs.

Hi Name hear is Brad, I have for sale a GE MASTR PRO 440 repeater 70 watt modal. This repeater is on the air now in Astoria Oregon on a frequency of 440.925+ no PL tone .
Comes with a DB products duplexer and Comet vertical whip 9.5 db gain antenna .However the antenna is at the top of the 120 foot tower and you got to go get it !!! The repeater is in a floor mount full size cabinet with built in GE TEST SET all in perfect working order .It now has a RC96 Repeater controller on board that .WILL NOT BE SOLD WITH IT . I do not own the controller and can not sell it with repeater. I also have at least a whole full size truck load of spare parts enough to build two more repeater's . This will be pickup only way too much to try to ship .

The list of other parts is as follows .
13. spare receiver strips some 440 some 2 meter
10 . transmit strips some 440 some 2 meter
3. power supply's .
2 . desk mate cabinets .
1 .portable GE Test Set .
4. mic's 2 desk top 2 hand held .
1 . CW ID unit .
2 .audio coupler controller units .
Lots of spare tubes .
Some Crystal pairs and icom modules .
All original manuals and docs on this gear .
Some other rack mount units for remote control of repeaters.
This will be sold as a package deal and as I said above way to much to ship so must be pickup only.
The asking price for all including the repeater on the air is . $600 or Offer .
Thank's and 73's KJ7VW

Hello Jones,

You have to remember there are two types of laws. Legislative Law and Administrative Law. Legislative Law must meet constitutional guidelines or at least have been voted on by Congress then proved unconstitutional if necessary by petitioning the courts. Administrative Law, which are the FCC's rules and regulations, do not have to meet any constitutional guidelines and are used to "administer" certain branches of government. For example: When you acquire a drivers license you are agreeing to follow the "Administrative Laws" set forth by your local Dept of Motor Vehicles. Some automobile license rules and regulations are unconstitutional in and of themselves. You have a right to Assemble under our constitution however one cannot assemble in automobiles if the middle of an interstate. This would be considered obstruction of traffic and illegal under administrative law (In Massachusetts anyway). Of course this is a silly example however one can clearly see the difference.

There is no constitutional right guaranteeing a person the right to use an automobile anyway they like just like there is no constitutional right guaranteeing that a person can do or say anything they want on the radio regardless of the free speech issue.

--

Some people look at what is and ask why.....
Other people look at what isn't and ask why not.....

.

Again, an open letter to Bill Pasternak who does not seem to want to respond?? He does read and post this Newsgroup.....

And to all Hams who listen to NEWSLINE either on a local repeater, or by phone from various locations around the Country:
---------->

Bill, why the constant 'begging' for funds or 'Newsline' will go away???

You do the production at a minimal cost from home, and the audio facilities at your employment, (KTTV-Los Angeles)..

The Newsline phone dialups are paid for and maintained by the Hams who have 'volunteered' to do so.....

You have some long distance interviews, but again, I fail to see the extreme begging for funds to keep it operating??????

I think we all deserve an explanation of your extreme 'overhead'.....

Free Photo Swap Shop Site http://www.haybay.net/va3wm/

Looking for a good place to advertise Amateur Radio or computer items? This is it, and the price is right too. Free. Unfortunately if you don't like our service we give no refunds, sorry.

You may include a picture for each and every listing you submit.

You can choose 30, 45, 60, or 90 day runs for your listing and you can renew too.

Once your listing is up and running you can come back and edit it as often as you like.

You can change the picture as often as you like.

You may include your linked URL.

Your e-mail address is not exposed! Ever! Spammers can raid web sites and harvest e-mail addresses, but that doesn't work on our site. Even when someone answers your ad they never find out your e-mail address unless you purposely post it in the body of your ad.

Amateur Radio is International in nature and since right now our sight is primarily VE-lander we do offer a convenient currency exchange calculator by special link to Xenon Labs in Toronto's financial center.

What's the catch?

I'm a ham with major TVI problems and two years ago I had a stroke. I have lots of free time, but I'm not allowed to play radio. I love our hobby and this is one way I can still participate. Please pay us a visit and make use of the swap shop.

http://www.haybay.net/va3wm/

Need some help, I have what I thing is a Ham four rotor and controller.
Thecontroller and the rotor have a brake mechanism. The problem is that
when the controller is on in the calibrate position it will creep toward
calibration but will not get to that point of being able to calibrate.
When it is turned off this whole process starts all over
Any ideas on what would cause this problem. The rotor seems to be
working ok though.

the old TU sounds like a Fleisher (sp?, i forget..) TU-170.

check levels into the TU box. sounds maybe like it's a little weak.

it's interesting that there's also been problems with comms and things like
13 or 14th harmonics (i think) getting into the microwave systems too.

the radios meet spec, but at the time they were designed, there was no
consideration for such harmonics - thought to be inconsequential if there
were any and the ones that are there are very very weak. turns out that
wasn't the case...

6353. House Wiring for Amp

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-29 00:00:00 UTC
From: Gary Danaher <gdanaher@flash.net>
Message-ID: <368929AD.5FA0357C@flash.net>
Source record: 154518

Looked around on the net and can't find the specifics for the minimum awg wire gauge for residential wiring breakers. Thinking about improving my amplifier situation and am wondering how much of a project I have in front of me. What would be the minimum wire size to handle a 20 amp 120 volt breaker without substantial voltage loss?

I need to build, buy, borrow or hire a simple valve tester. I've been looking around the Ng's and various sites but don't see a DIY tester and all the FS sets seem to be USA or Canada - unless you know better.

simon.cox@breathe.co.uk

Taunton, Somerset.

I don't have a great number to check so borrowing / begging the use of might be my best option.

I'm taking my Technician on the 5th. of January, and am building my station now. Hope to be on 2m and 6m by end of January. I plan on taking my General exam in early March, and the 13wpm code test.

I see no reason to wait on the FCC. That's about as much fun as watching paint dry :-)

Standard residential 20A circuit requires 12 gauge by code, 15A is 14 gauge.
If you need more current you need to upgrade the wire.

From: wiley@msn.com
Message-ID: <368956ac.7271667@news.earthlink.net>
Source record: 154524

The tiny ALINCO DJ-C5 is among the easiest radios to modify for expanded receive/transmit. Even though it is about the smallest dual band hand-held.....

Just remove the rear cover (3 phillips screws) and cut the red wire loop inside on the circuit board near the speaker.. Replace the rear cover, reset the microprocessor per the manual, and that's it......

Simon,
I have one but I'm in Nort Glos so unless you are passing in the next
few days I doubt if its any use. What comes to mind is that some months
ago I saw an article on constructing a simple valve tester. It was, I
believe, in Radio bygones. If you contact the publisher he can probably
find you the article. They do back numbers for a couple of quid.

If you are passing Stow on The Wold you are quite welcome to drop round
and test any number of valves if this doesn't help.

Regards

Robin

>If you need more current you need to upgrade the wire.

Even that is undersizing things. Try upping things a size to 12 gauge for 15A and 10 gauge for 20A. Bigger wire will give you less voltage loss, and less heat build-up in the wiring. It's better to have more than you need in terms of wire gauge.

Hello Keith

The main problem you might have is the TNC that you are using. I have also used the MFJ 1278 and will never own another MFJ product. I recommend the Kantronics KAM Plus if you are going to run on HF. If you will be using it on VHF only then I would go with a Kantronics KPC-3 plus. I think the Kantronics products are by far the best. Have a good day, and 73's

6369. GFCI Circuit Help!

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-29 00:00:00 UTC
From: "William S. Friedlander" <williamf@pressenter.com>
Message-ID: <3689B4B3.3168@pressenter.com>
Source record: 154534

First off this is not related to Amateur Radio, but I'm hopeful that someone in this area can offer some help.

I have recently had a problem with a GFCI that is controlling some outdoor lighting. The operation is very erratic. And this is after being replaced with several new ones. One day the GFCI will stay "on" for hours, other days it will trip in a few minutes after being reset. Other days it trips immediately. While I understand what the device is supposed to do. And, there are a number of good house wiring books in our local library that tell how to install them, I have not been able to find out how the circuit works. (Inside the box that is.) Is it some sort of bridge circuit? Or What?

I will be most appreciative if someone can explain the circuitry or at least provide a published reference that does address this operation.

Thanks in advance for any suggestions.

Wildcat,
as the author of this thread it seems that we have gotten away
from the meat of the subject, and I don't want to hear the cry babies
and there right to free speech shit.The bottom line line is we need to
be setting an example of good behavior ALL THE TIME.. period
Enforcement is the only way that this is going to clean up this
''Trailer Trash'' that operates on 3900,14.300,3950 e.t.c.
I for one do believe in the right of free speech,BUT!!
I dont believe in calling someones wife a whore, or a person
of another faith a ''Hymie" thats where it gets away from ''Rights''
thatcomes an issue of proper operation practices. which comes to the
enforcement issue. Start taking away these ''Bozo's equiptment
and stiff fines and it will cease remember no one has as much
power as ''Big Brother''
It would break some of these clowns heart if as an enforcement
type punishment that there equiptment be given to a new''General''
as punishment for such unlawful acts committed on public airwaves.
I dont think they would like the idea that someone else would be enjoying
there equiptment IF this was part of the enforcement process.I know that
would hurt my pride and my pocketbook. just a thought and I hope the only
ones offended are the ones who are committing these acts.

Drew (CBRambo) wrote:
>Gee, what do you think of that, Jeff?

If it was legal on your plane, then why hide the scanner in a
newspaper and pretend you're instead listening to a CD player?

I still don't understand why you would possibly endanger the lives
of everyone onboard then come on here and brag about it. If there
is even a remote chance of interfering with the avionics, why
would you do it? That you have to hide it shows you know you're
doing something very wrong.

It seems to me that any definitive answer as to whether scanners should
be permitted onboard could only come about after each airline had tested
every scanner on the market through their entire operating range of 30 to
900+ MHz against every piece of RF-related avionics onboard. Have the
two mentioned airlines conducted such tests, Drew? If not, why take
a chance? (This thread speaks more about your personality than any-
thing else you've posted; you're what used to be called a "bad seed.")

So, with changes coming in the licensing structure, would one be better off to go ahead and get a technician or novice license now, or just wait. Opinions welcome.

(((But p-l-e-a-s-e, this is just a simple request, so don't start a flame-war over the use of CW. <GRIN> Thank you.)))

6379. Minnesota QSO Party Rules

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-29 00:00:00 UTC
From: k0hb@juno.COM
Message-ID: <19981229.021123.17254.0.k0hb@juno.com>
Source record: 154585

Minnesota QSO PARTY

1800 UTC 06 February 1999 to 0600 UTC 07 February 1999

Sponsored by the Twin City FM Club

Co-Sponsored by Hamfest Minnesota, TR Log Contest Software by N6TR, Radio City, Northern Minnesota DX Association, St. Paul Radio Club, Twin Cities

Repeater Club, 3M Amateur Radio Club, K0XQ, & Sven's All-U-Can-Eat Lutefisk
& Lefse Barn.

Contest Rules:

1. Time: Contest runs from 1800 06 February 1999 until 0600 UTC 07 February 1999.

2. QSO Rules: MN stations work everyone, all other W/VE & DX work MN stations. Work stations once per band & mode. MN mobiles may be worked
once per band & mode from each county, & MN mobiles may work stations
once per band & mode from each county.

3. Bands/Modes: HF 160m-10m (excluding WARC bands). VHF 6m. CW/SSB/RTTY
modes only.

4. Exchange: MN stations send serial number & county (two letter designator). ** NOTE ** MN Mobile stations must sign callsign with county two letter desigator, in addition to the exchange; for example
K0BUD/HN for Hennepin County). W/VE & DX send serial number & state/province/country. Multipliers for MN is MN counties (87 total)
plus states/provinces (49 states excluding Minnesota + 10 Canadian provinces + 2 Canadian Territorries= 61 W/VE mults total); 148 max multipliers (all bands) for MN stations. Multipliers for everyone else
is MN counties (87 total). DXCC countries may be worked for points only-no multipliers.

5. Scoring: Score 1 QSO point for SSB QSO, 2 QSO points for CW/RTTY QSO.
TCFMC Club station W0EF is 10 QSO points per contact, any band/mode.

Final score is QSO points total times multiplier total.

6. Operating Classes-MN: Single Op Low Power (150w or less), Single Op High Power, Single Op Novice/Tech, Mobile/Portable, Multi Op/Single Transmitter. All classes mixed modes only. In addition, the Minnesota Wireless Association is sponsoring the MN Club aggregate trophy, which will travel year to year to the club with the highest collective point total submitted by it's members (who MUST SPECIFY club affiliation on the summary sheets turned in with the log).

7. Operating Classes-W/VE: Single Op Low Power (150w or less), Single Op High Power, Multi Op/Single Transmitter.

8. Operating Classes-DX: Single Op, Multi-Op/Single Transmitter

9. Suggested Frequencies-CW: Up from 1.810 3.550 (3.695) 7.050 (7.110) 14.050 21.050 (21.150) 28.050 (28.150) 50.050 ** NOTE ** Suggested "go to" times for 160m are 0430 & 0530 UTC.

10. Suggested Frequencies-SSB: Up from 1.870 3.890 7.230 14.290 21.390 28.420 50.150 ** NOTE ** Suggested "go to" times for 160m are 0430 & 0530 UTC.

11. Suggested Frequencies-RTTY: Within the ARRL suggested band plans for all bands.

12. Logs: Send logs (including summary sheet) by March 15th to Twin City FM Club, Attn: MNQSO Logs, PO Box 580555, Minneapolis, MN 58055 or email to webmaster@rossiya.net. Log & scoring summary sheet available on the Internet at http://www.rossiya.net/mnqso.htm

13. Prizes: 1st place in each MN & W/VE class receives plaque, amateur related prizes (TR Log Contesting Software OR RAC Callbook CD ROM OR choice of 1999 ARRL Handbook, 1999 ARRL Antenna Book, 1999 ARRL Operating Manual) plus a special gift from the state of Minnesota; 2nd & 3rd places receive certificate. 1st place in each DX class receive certificate, amateur radio related prizes (choice of 1999 ARRL Handbook, 1999 ARRL Antenna Book or 1999 ARRL Operating Manual) plus a special gift from the state of Minnesota.

14. Plaque Sponsorship:

MN Novice/Technician: Twin Cities Repeater Club

MN Mobile/Portable: 3M Amateur Radio Club

MN Single Op/High Power: Radio City

MN Single Op/Low Power: Hamfest Minnesota

MN Multi Op/Single Transmitter: St. Paul Radio Club

W/VE Single Op/Low Power: Northern Minnesota DX Association

W/VE Single Op/High Power: Northern Minnesota DX Association

W/VE Multi Op/Single Transmitter: Radio City

DX Single Op: St. Paul Radio Club

DX Multi Op/Single Transmitter: Hamfest Minnesota

Minnesota Club Aggregate Trophy: Minnesota Wireless Association

6381. Yaesu FT-920: To mod or not to mod (please share your experiences)

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-29 00:00:00 UTC
From: hughjass@REMOVE_THIS.beer.com
Message-ID: <1xXh2.12020$Vg2.3304605@news3.mia>
Source record: 154587
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.ham-radio,rec.radio.amateur

I have a new Yaesu ft-920 HF+6M radio and have been itching to do the
Tx-expand mod found at various radio mod sites. See:
http://home1.inet.tele.dk/ehh/mods/mod/yaesu/ft-920.htm

This mod involves uploading a file directly through the serial port that will
supposedly unlock Tx on the full range of frequencies.

I have searched around and read the newsgroups and some have said that
this mod was not intended for the US model, and that it could damage the
CPU. Others have said that it worked fine. I did not actually see any posts
from anyone who did the mod unsuccessfully and ruined their radio.

I would appreciate feedback/comments from people who have performed this
mod to their radios, and what the outcome was. I would like to see this issue
clarified once and for all.

Please, no flames.

Thanks,

Hugh

Hello
I am interested in getting the new Yaesu FT 847 and was wondering if anyone has had any expierience with this radio? If so, how is it's recieve and sensitivity? Does it get much intermod? Would I be better off getting seperate radios such as an HF radio with 6 meters like the Kenwood TS 570SG and a VHF/UHF radio like the Icom IC 821?? Any information is greatly appreciated!!
Please email me directly at: N9YLN@AOL.com

This issue can't be "resolved once and for all". As several previous posts have indicated, the sucess or failure of the mod depends on the CPU version and E-Prom Bios rev in your particular radio. Since there is no info on which versions it will work with and which versions it will destroy, the risk is yours. Take a gamble and try it, or be safe and send it to Yaesu with a copy of your MARS/CAP endorsement and they will do it for you for the cost of shipping.

(Incidentally, I have seen a post or two on the newsgroups from persons who have had damage from trying this mod. You might want to search www.dejanews.com and try to find them for yourself. However, I would suspect that most of the people who may have messed up their rigs with this mod would avoid telling the world about it by posting it here.)

As Mr. Eastwood once said "Do you feel lucky ?"

From: kmortensen@snet.net
Message-ID: <76anrq$k9t$1@nnrp1.dejanews.com>
Source record: 154595

I am trying to get up and running on RTTY and I am not having much success. Unless the signal is like 20db over S9 I get almost all garbage. I am using an Omni VI plus and a 6 year MFJ 1278 multimode TNC.

10 years ago I had no trouble with RTTY when I used a Corsair and a dedicated RTTY unit that I can't even remember the manufacturer of. It was in a black case, had a couple of green LEDS and I think it had a meter on it as well.

Am I doing something stupid? Is it me, (quite possible) or is the MFJ basically useless on RTTY. Are the other TNCs such as the DSP232 or Kantronics better? Or should I shop around for some 15 year old technology that really does work on RTTY. What is everybody else using?

Thanks for any recomendations.

2 meters does tend to be better behaved altough there are only a couple of HF
frequencies with the idots on them. Pay them no mind, their time will come....

>By the way, there is no 6-Meter here, ever?? Why?? Not much 10-meter

What's wrong with jamming? Musicians get together all the time and have
impromptu sessions, playing jazz, blues, etc. I don't see why you guys make
such a big deal about jamming all the time.

ADI Sponsors New Ham Radio Testing Website
For release 12/28/98

In the true spirit of amateur radio "elmering," PREMIER Communications, the makers of ADI radios and PRYME speaker mics, antennas, and battery packs, is pleased to unveil a new website designed to help newcomers study for and pass the U.S. amateur radio license theory exams.

This new HamTest.com internet site gives prospective amateurs and those studying for an upgrade an easy resource for all of the U.S. amateur radio license theory tests. Users of the site have the oppurtunity to study the entire question pools, from Novice to Extra, and can even gauge their progress by taking live, simulated exams using a java-based applet. And, when you are ready to find a test session in your area, we provide an easy link to the ARRL VEC homepage and the database of upcoming test sessions.

If you are struggling with an area on the test, you can even get help by posting a request in out interactive user forum, or get advice from experienced amateurs in our Elmer's Chat Room.

For the more advanced functions on the site, such as chat and simulated real-time testing, a java-enhanced browser is required. Users of Internet Explorer 4.0 or Netscape 4.0 should be able to use the advanced functions with ease. The study material is available to users of all web browsers.

In this time of license restructuring, HamTest.com is up to date with the current question pools and license classes. We will be watching the current license restructuring proceeding very carefully, and will take steps to keep our site immediately updated as soon as changes in the license structure take place.

All materials on the site are provided free of charge for the good of the amateur radio community. We believe that the Internet represents a very valuable tool in the recruitment and training of new amateur radio operators, and we are very pleased to be able to further the cause of ham radio in this way.

The website URL is http://www.hamtest.com. If you have any questions about this site please feel free to e-mail us at elmer@hamtest.com. Remember also to check out our ADI / PRYME Amateur radio equipment homepage at http://www.adi-radio.com as well as our brand new land mobile equipment homepage at http://www.pryme.com.

You're a troll, Mr. Grinch

Believe it or not, some hams actually do take time out from
the Internet and from the 2 meter repeaters to build something
or to operate an interesting rig on an interesting band.

Not that there aren't interesting people on the repeaters
or on the 'net -- but that you won't find 'em there most of the
time because they're doing something else interesting and they
surface only rarely.

It's kinda like fishing -- you look out over the ocean, and see nothing.
You spend some time where the fish are, and you might occasionally see
something interesting or even wonderful.

A "why bother" attitude won't find the hams who are decent, generous,
interesting. It will shake loose some of the loser kooks pretty quickly,
but you should no more base your views of ham radio on them than you
should base your views of deepsea fishing on a mullet or two.

Take some time -- you might get to see a Blue Marlin after all.

Well...it took me over 20 years to get to 5 WPM and pass
my Novice exam, but when I decided to upgrade my code, I got to 13 WPM
in the time it took to make a set of practice tapes off my computer.
I literally made 8 hours of tapes to take on vacation, packed them up
and never listened to them, and returned to pass the 13 WPM a couple
of weeks later.

I haven't SEEN people get 20 WPM in a few weeks -- but it's simple enough
that you conceivably could develop an immersion program and have it succeed
for perhaps 80% of the participants. It's said that 30 minutes practice
every night for a couple of months will do the trick -- and that's 80 to
120 hours, or the same as a three-week immersion.

I just don't see that it's feasible for most people to go on a Morse Code
holiday for three weeks, and do nothing but practice code until they pass
their Extra exam.

Of course, if anybody is seriously interested in a $5000 bona fide,
guaranteed license-or-money-back Extra class vacation, a provider could
be located and an exam team gathered up. Florida Keys? (hihi)

Of course you will have to know Morse code to order your meals.

Careful now or you'll get nasty messages calling you a coward etc. for not jeopardizing yourself or members of your family by not posting your name and address when engaged in arguments with mental midgets. One of these days some of those without a _clue_ will wish they hadn't been so hasty posting their personal information here.

Don't know where you are located but it is best to be able to touch and feel before you buy so there aren't any disappointments. Ham Radio Outlet, Texas Towers, Jun's, Austin Amateur Radio--there must be a dozen or more I can think of that are all honest. Essentially if they are authorized dealers you can trust them. Check the web sites for Kenwood, Alinco, Yaesu, and Icom--get some ideas and the phone numbers of retailers. There are no 'deals' in the sense that you can buy a car cheap--all dealers will be within a few dollars on any given model. And yes, the Radio Shack brick is good for what you have to pay for it and it is semi-indestructable.

If your not hearing anything on 10 then you have a major malfunction or
you'r not listening when the band is open.I just made 950 contacts on 10
during the arrl contest and could hardly find room to call CQ.
I use 2-meters a lot and there is no cursing here(south-central
Montana)but many of the operators hardly know how to work their radios
and insist on using all of the CB/cop lingo.AB7RS

Yes, there is a 2m repeater here that broadcasts all the communications whenever the shuttle goes up.

Those dual monaural plugs you are talking about are accoustic transducers in which you plug your accoustic tube headphones into.
There is only audio waveforms in the form of vibrating air going out those jacks, no electricity in them at all.
I've seen brand new 767's with the accoustic tubes and I've seen old original MD-80's with 1/4'th" phono jacks so go figure.
All I know is that those accoustic tube things suck as they are always unbalanced and when your big like me, your legs cram up against the tube fitting and pinch off all the frigging sound.

If you are talking about walkman headphones, then you need 1/4" plugs for
1/4" inch jacks.
1/8'th Jacks and plugs are those big assed monsters which are used for electronic
keyboards and amplifiers in rock concerts.
You want to use 1/4"th inch "Mini" Jacks.

Mark & Co.,

My only recent experience with airline headphones is with US Airways,
which I fly transcontinentally about eight times a year. At least in
the First Class cabin, they use lightweight electrical headphones just
like Walkman types, except for the dual 1/8" mono plug connector that I
described earlier. I believe that the same headset is also used in the
Coach cabin. I am quite aware of the difference between acoustic and
electrical airline headsets -- I thought the acoustical ones weren't
used anymore. This impression might be due to my concentration on US
Airways. I recall using the acoustical headsets many times when
traveling during the 70's. They are really a pain in the ear....

Source record: 154419

The Radio Shack HTX 202 is a steal right now at $129 - 149. They re closing them out in preparation for a new more expensive one to be introduced later this spring.

I am very pleased with my trusty old Yaesu FT-470 dual-bander. You can pick these up at hamfests for $150. Also, I use the Yaesu FT-51R. It has same button functions as the FT-470, meaning that it is very easy to learn how to use. I had a Yaesu FT-50 for a while but it is too damn complicated and the buttons are too small for human fingers.

My recommendation:

1. Yaesu FT-470 if you can find one.
2. The Radio Shack HTX-202 on close-out. Actually, it's a tossup between the FT-470 and the Radio Shack rig.
3. Spend the extra bucks and get the FT-51R.

Whatever you buy, be certain to get a charger and a couple of extra battery packs.

I am intensely looking for a (hopefully) mint condition
Brown Bros. double paddle - or double paddle w/straight
key - *that had the jeweled bearings*.

I have a model CTL-A which has knife edge bearings, but
I want the older jeweled model to buy (or trade).

This is a serious request and I am willing to pay $$.

Brown Bros. was in St. Louis, MO, and was the manufacturer
of superb CW keys and accessories.

Thought this might be the group to ask if there is someway to improve AM radio reception. We are often at races where they broadcast the track announcements over a local, low watt AM radio (usually around 530 Khz). We are ususally at a remote location on the track and try to use the car (or portable) radio to hear what is going on. Most of the time we get pretty good reception except towards the evening. Any ideas?

Although you are probably not incorrect, we were discussing commercial air
carriers and not
general aviation. I stand by what I said. Thank you.

Please cite where the FCC prohibits the use of cellular telephones on ANY
aircraft while in Flight PERIOD. "Check with your nearest FCC office"
doesn't have any credibility with me...that seems like a cheap way out.

If you check my original post you will see I cited Sec 91.21 of the FARs as
well as the Advisory Circular pertaining to it. Please do the same.

6424. Re: GFCI Circuit Help!

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-30 00:00:00 UTC
From: Wildcat <wildcat@tp.net>
Message-ID: <OSpi2.2916$Dy5.12823@news3.ispnews.com>
Source record: 154468

Hello Bill:

First off, did you connect your lighting to the LOAD side of the GFI or to the LINE side?

Is the GFI circuit controlled by a GFI receptacle or a GFI Circuit Breaker at the electrical panel?
a. Most GFI receptacles are not rated for outdoor use because moisture can defeat the interruption circuit.
b. GFI circuits are not recommended for applications such as OUTDOOR LIGHTING. The intended use is for a LOAD application around water such as a sink or a swimming pool. The transformer for you lighting may be alternating at a point where the GFI thinks there is a problem and hence is shutting down.

The first thing I would do is check your LINE and LOAD connections (if you used a receptacle).
If you uses a Breaker type GFI, make sure you have the correct wire connected to the grounding bar in your electrical panel and make sure that you connected both black and white wires to the screws on the breaker itself.

If these are correct, you may have a bad GFI breaker or Receptacle. Replace it.

If your problem continues after replacement. It is probably the type of load you are appyling to the circuit.

I hope this helps.

Hello Gary:

#12 AWG Romex if your electrical system is copper

#10 AWG Romex if your electrical system is aluminum

Anything more is just a waste of money because your circuit breaker will
shut down if you over tax the circuit.

I replied:
Better to have the breaker shut down (that's what it's supposed to do) than have either too much voltage drop, or even worse, overheating in the wiring (in walls and such). The extra cost for larger wire is piddling compared to any problems that might/will occur.
Oh yeah, if you've got aluminum wire in your house, make sure you have the right type of outlet. The way most of the fires started many years ago with aluminum wiring was that the outlets didn't secure the bare wire correctly. What happened was that the aluminum wire expanded and contracted as it heated up and cooled depending on the load, and it gradually pulled out of the connections on the back of outlet, switches, and so on.

Depends on the airline. Some allow receivers, NONE allow transmitting which is why I lock my mike button if I plan to use my HT as a "scanner". Most all list their restrictions in their respective company magazines in the pouch on the back of the seat.

On the airline that allowed same the attendant checked to be sure I was not transmitting but then said receiving was ok. Again, except on approach/departure. Guess it depends on the plan's susceptibility to spurious RF / IF a receiver or other electronics might generate.

I also wonder what a discharge from one of the implanted automatic defibrillators might do but so far no one has any experience with this onboard.

The National Electric Code specifies 12 AWG for this. It is a conservative spec and you won't have substantial voltage loss in the 20 AMP range.

Jim,

Are you taking the position that there is no rule of law prohibiting the
use of cellular phones during any phase of flight?

Folks,

I have a related problem with a GFI system. After setting up my HF station on the second floor of my house during the late summer of this year, I noticed an interesting phenomenon. If I run my FL2000B linear amplifier (powered by a pre-installed 240V line in the room), the swimming pool pump GFI trips. There is another GFI connecting a spa circulating pump, but it never trips. No other power problems have been identified. My present DC station ground is connected to the "ground" pin of a 117V three-wire socket. Please note that the GFI tripping happened with or without this ground being connected. When the ground is not connected, there is "RF in the Shack" to the extent that the metal microphone stings the lips if touched while transmitting. The "hot gear" problem is much more pronounced when using a 40m inverted V antenna fed with coaxial cable (unbalanced feed). My vertical antenna doesn't appear to have this problem to the same extent. Yes, I know that I should run a ground strap to a grounding rod, but I'm concerned about resonances.

Any suggestions would be appreciated.

Many thanks for the helpful suggestions relating to GCFI operation!

In answer to Wildcat's observation, my GCFI IS a receptacle device
rather than a Circuit
Breaker--only type. It is mounted inside the house out of the elements,
but is controlling the outdoor lights through Romex wiring, buried
underground to the lighting fixtures.

The fact that the GFCI would stay on for minutes before tripping, while
after resetting, it would immediately trip (or vice versa) suggests that
that behaviour is characteristic of what Wildcat said a receptable type
GCFI would do if controlling outdoor circuits.

Anyway, the thoughts and suggestions have really been helpful.

(I still am curious as to what is "inside" solid state stuff that
actually senses the difference in outgoing vs returning currents.)

Another thing to note on this thread: I once took a flight to Chicago on America West Airlines, who said it would be fine to take my scanner on the plane - I was ecstatic until I got on board and turned on my scanner, only to receive nothing. I was perplexed until I thought about the kind of plane I was on. An Airbus A-320. You know, the fly-by-wire, so-well-shielded -you-could-damn-near-survive-a-nuclear-blast type of aircraft. RF bounces off this plane like water off a ducks back. So much for that...

However, if you wanna lay out the $5 for the headphones, some flights have a channel that the comm's are broadcast on. This is even better than scanning because you don't have to switch freq's everytime they do - you just sit back and enjoy the ride!

Wow Gary you mean you actually read the book they provide? (grin) You are correct. I fly frequently for work and have found that some airlines do allow scanner receivers to be used in flight. None of them that I have flown allow transmitting devices.

> On the airline that allowed same the attendant checked to be sure I was not
> transmitting but then said receiving was ok. Again, except on

>

The official reason is for approach/departure is because rf problems. However, the biggest reason is to clear the aircraft of any items that may hinder a quick evacuation if needed and may distract a passenger from paying attention to the crew at approach/departure. It gets the lap tops out of the laps and under the seats.......

I think you would find the same thing in most commercial large planes. The metal body makes a very good rf shield. Try to get a window seat and put the antenna next to the window.

Ouch Phil!!! $5 bucks? what airlines do you use? They usually hand the things out for free in most carriers I use. A way to get around this is to take a pair of walkman type headphones with you. Most newer planes have jacks that will use them instead of those horrible acoustical tubes.....

>
> Gary
> AB5RM

At least #10 AWG. I would not go any smaller.

If the amp is dual voltage (110/220) go with the higher voltage. There's
less current draw at the higher voltage. This, of course, means a separate
220 outlet to the shack, and a separate breaker.

If you live in an older house that has a 60 amp service, don't even think
about a linear until you upgrade to at least a 100 amp service. This might be
a hassle, depending on building codes and regulations in your area, but it's
worth the extra few hundred dollars to be safe.

DAB,

6m is in use, however much less than 2m. Most of the activity on 6m right now is in the CW and SSB portion of the band. When the band opens on 6m contacts are possible world wide. Not sure why your not hearing any 10m activity the bands have been very good lately and you should be hearing DX from all over. What receiver are you using? antenna?

>Rod

Rod, it truely depends on what you want to do. There is a plethora of older 2m rigs on the market that can be had for under $100 at a swap, there are also brand new ones selling for not much more than that. The dual banders are nice 2m/70cm but depending on your area there may or may not be much activity on 70cm.

I'm not a big fan on spending $300 + on a new HT, as far as the new radios go, you'll find the opinions vary the same as if you asked about buying a new car. It's a matter of preference. Bottom line, start with something as inexpensive as possible until you have some experience and know exactly what you want.

<< Better to have the breaker shut down (that's what it's supposed to do) than have either too much voltage drop, or even worse, overheating in the wiring (in walls and such). The extra cost for larger wire is piddling compared to any problems that might/will occur.>>

If you check the national electrical code, you will find that #12 thhn Cu. is good for 35 amps.
THere's an exception to the code that only allows use of #12 for 20A curcuts.
Also, you can use the 35Amp figure to determine the "Line Loss". That means you can indeed have a #12 Copper line at around 180' & still have full voltage at rated capacities.
Also, most Romex type wire now has THHN type insulation.

The National Electrical code was NOT written just to be ignored. The writers figured it all in when they wrote the book.

\
Gary, an easy way, if you can get away w/ it, is to run PVC conduit up the side of the house where the XYL won't get too mad(maybe a good time to put up some latticework for some Ivy to cover it up).
#12 copper is More than sufficient.

<<If you live in an older house that has a 60 amp service, don't even think about a linear until you upgrade to at least a 100 amp service. This might be a hassle, depending on building codes and regulations in your area, but it's worth the extra few hundred dollars to be safe.>>

A few hundred dollars for a 100 Amp electric service? I've been an electrician for 14 years. When I started, it was around $600. Now, it's around $900. Always depending on how many circuts & other things. I've always used Copper. Never even priced aluminum.

I have the following test instruments for sale.
All in working order.

Marconi Sig Gen model TF2015/1 complete with TF2171 digital sync unit.
Covers 10MHz to 520MHz AM/FM

£110 for both units.....sorry will not split.

Dymar 1785 Modulation meter AM/FM tuneable from 30MHz to 480MHz. IF and AF outputs. I have 2 of these units at £30 each.

Dymar distortion factor meter type 1765 range 20Hz to 20KHz. £25

Dymar AF wave analyser type 1771. £35.

Marconi TF1065A TX/RX output test set. Measures AF power and RF power etc. £25

Please email me for contact details.

John@flycatcher.freeserve.co.uk

Thanks, John G0JJL

Hello Bill:

The newer GFI's actually are chip controlled and sense voltage changes in the circuit. Not only will a short circuit cause the interruption circuit to open but drastic voltage drops or surges will as well (as in the case of the previous poster who had a 220V circuit and a linear amp connected to it). The voltage changes are measured in micro-seconds with a specific tolerance on either side of the intended voltage. Once the chip senses a breach in the tolerance.....pop goes the breaker.

Hello Curt:

Your problem is a common one. Many people will have the same problem when running power tools. The brushes in the motor of the power tool causes small spikes to go through the electrical system of the house hence causing the GFI's to trip. Sudden voltage drops or surges also result in an identical occurrence. It sounds like your linear amplifiers sudden surge (or draw) on your electrical system is doing the same thing. A GFI with a greater tolerance rating may be needed in your application. They are sold with different values of protection.

I hope this helps.

Hi Curt,

The only dual plugs I have seen the airlines use are the acoustical ones use by those hose type earphones they hand out. Those headset don't have any electrical components in them. They just funnel the sound from a very small speaker in front of them in the arm rest. If you turn the volume up without plugging them in you can hear the audio coming out of the holes in the arm rest.

Most of the upgraded planes in the last 10 years or so also have a standard 1/8 inch phone jack. You can plug the headset from your walkman in and it works fine. I do this all the time.

To Rick, I would just encourage you to study and learn as much as you can because more than anything, amateur radio is a demonstration of technology and creativity, despite what some plug and play cb type might say. When you get a call, sign it proudly because you earned it. This VE would never take a bribe, nor would any other VE I have ever known, and I can assure you that the candidate offering the bribe would never be licensed. It is true that some folks are dishonest, like the writer noted below, but most are honest and caring.

6465. TS-830s

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-30 00:00:00 UTC
From: BColenso@aol.COM
Message-ID: <b96f617b.368ab4cf@aol.com>
Source record: 154509

Hi All:

Earlier today I was at a local ham shop. I was looking at some dual band HTs and amps, and at some used HF gear.

They had a TS-830s for $619.00. It is VERY clean, new finals, non-smoking owner who only drove it to church on Sundays. Absolutely mint. BUT, $619 seems a bit steep for an '830. I thought they usually sold for around $500--550. Comments?

Also, he said it did have a narrow CW filter, but I forgot to ask if it was in the first or second IF (they did make filters for both, didn't they?). Are there any pros and cons to having, say, a 270 Hz filter in the first (10.5MHz) IF instead of the second (455KHz) IF, or the vice versa?

How is Kenwood for ordering parts for something as old as an '830?

Thanks in advance.

6472. Re: Inverter @ Ham Radios

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-30 00:00:00 UTC
From: fmmck@aol.com
Message-ID: <19981229205642.24252.00003649@ng-fc2.aol.com>
Source record: 154543

You said:

The radio is a TS 530 and uses 120V AC. I wish I could run it directly off of 12 volts.

Paul-

I wonder how similar the TS-530 is to the TS-520? The original TS-520 came with both 120 VAC and 12 VDC capability. They later brought out another version of the TS-520 that did not have 12 VDC capability, but had the place to add power transistors that worked with its existing power transformer, to act as an inverter. I think they sold an upgrade kit that had the necessary parts.

If the heat sink for the transistors is present in the TS-530, or there is a place to mount one, then it is conceivable that you might be able to upgrade yours to work from 12 VDC. If the 530's power transformer doesn't have the inverter windings, then perhaps you could obtain a 520 transformer from Kenwood. (I didn't say it would be cheap!)

I have programmed a top and bottom range within 10 meters in memory ch. 99
it says prgm or something, and I agree it's very useful for keeping my eyes
on the road. Is that what you did? Good idea on the dummy plugs, they've
been using chainsaws on dashboards around here lately. There's not nearly
enough dis-incentive, uh-oh I'm starting to get off subject. How would I set
a PF for a channel, I practice alot of code at 28.150, but when driving
ussually stick to the phone band. The manual is awful about codes for the PF
keys. Tnx-n-advance, Jim

Thanks for the info. Good plan with the not looking at the display while
driving, but I hadn't figured out how to set limits on the vfo's except when
in memory channel 99, and set-up so memory channels can be tuned. I read the
manual but it's not red-hot on this or the codes for the PF's. My wants in a
control head doesn't need a display, but a tuning knob would be nice. Could
you drop me an email if you are willing to discuss this some more, I assume
no-mail.net would get bounced back.

Source record: 154546

I recently passed my tech exam and purchased a Kenwood Tri Band
Radio.Due to the fact that I dont want to use a very high in height antenna
I have opted to purchase 3 separate antennas for my vehicle because of
the height problem in my garage etc By not using a triband ie Comet antenna
am I jeapordising my signal and quality with the 3 separate antennas
2 m 440 and 220 or should I have kept with the one antenna I am not talking
appearance strictly performance I would like to hear some answers and possibly
some other options or was this the best route if I wanted to keep the antennas
short Thanks

For the last couple of years I represented a local Lions Club in this
contest. I'm not a Lion but it sounded like fun and it got the local club
some points.
It was pretty bad in 97 (e.g. the "main" contest station did not seem to
follow the published rules and discouraged quite a few people), a bit better
in 98 and then Lions International decided to can the contest for 1999.
Lions in South Africa are reviving it (see
http://www.sarl.org.za/contests/)
Wondering if many people are planning to take part?

I have a Yaesu FT-230R mobil 2-meter rig that has the creeping crud
LCD-itis, and of course, Yaesu no longer stocks the part. I need
either:

1. A dead FT-230R that still has a clear LCD
2. An alternate source for the part (not likely, I know, as these things
tend to be custom). The
number etched into the glass is H1313-0. Maybe the 430R uses the
same display?
3. Information from anyone who has adapted the rig to use 7-segment
LED's.
4. A copy of the schematic of the display circuit, so I can attempt #3
myself.

Thanks in advance for any help that anyone can provide.

There is no way to set limits on the VFO's. I set the limits on the scanner for the area of the band I want. The scanner then will scan only within those limits and you won't go out of band. Program one of the mike buttons to start the scanner. It scans across the band. When you hear a signal hit the same button (or PTT) and it will stop there. Use the up-down mike buttons to fine tune it and your there. Also you can leave the squelch full open to keep the scanner from stopping on garbage. In this case the scanner will update only every 6 seconds or so, but you can use the up-down mike buttons to prod the scanner in this mode. I programmed my scanner to jump 1khz so I just push the up-down mike buttons jumping 1khz until I find a signal, then turn off the scanner and use the same up-down buttons to fine tune. That's not how it was designed to work, bit it does...

What's gutsy about beating a panty-waist like you only to wind up with some
kind of legal ramifications. Most hams are too smart for your nonsense,
though (hopefully) you'll run across one someday that isn't.

20+ line boorish sig snipped:

I think that if the ham has privledges where the freebander is transmitting it's yes to both. The freebander is using the frequency illegally right? The ham I would think has every right over the freebander to use the frequency. I say go after the freebanders. They started cracking on NYC cab drivers that used 10m. The TLC now does random checks of the cabs and will issue fines to those who they catch.

6495. IC-740 Filter question

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-31 00:00:00 UTC
From: morrista@oz.fd1.uc.edu
Message-ID: <76gqefron1@news.ececs.uc.edu>
Source record: 154316

Just want to make sure I have the right information...

I have an IC-740, currently with the narrow CW filter installed in the option position (that is, when I push in the "Filter" switch on the right, the narrower CW filter is engaged). Am I correct in thinking that in this rig, one can only have one "option" filter installed? That is, you have to decide if you want a switchable narrow filter for CW or one for SSB, but you can't have both?

My field day CW folks love the rig with the narrow filter. I do very little CW contesting but love how it chops the cacophony right out. I'd like to have the same help for SSB contesting (the notch filter + my outboard audio filter help, but not enough or quite the right way :-)) but I'd love to have my cake and eat it too.

BTW, I also have bought the keyer and FM unit on various trips to the candy store (R&L Electronics in Hamilton!, Ohio--might as well give them a plug) but haven't installed them yet. Any special issues, good or bad, I might want to know about with either of these modules?

See you on SKN?

That's a valid Class C format (for Alaska). I used to be NH6IL
(a Hawaii Class C callsign).

AL7, KL7, NL7, WL7, AL8, KL8, NL8, WL8 are all valid Alaska (Call
Area 12) prefixes.

As to whether the call itself is valid, I didn't see any reference
to it at the callsign.ualr.edu site.

To dx302man - you can try to try to disguise such keywords as "3950"
and "liberty net" but it's just as easy for us to add "dx302man@aol.com"
to our kill files. With the "trn" newsreader, I can do that with the
stroke of a single key (actually, two strokes - the CONTROL key has
to be punched, too).

A happy and healthy new year to you,
Jeff KH6OO / 7

WEll, if you do the calculations for the loss factor for 35A you will find that a full load of 20Amps at 180' is just fine.

The reason I have that figure, is that my Boss showed me w/ 180' of 12/2 Romex w/ a measured 20 Amp load.We checked the voltage at the circut breaker & the load end.
Only 1.86v drop. Really insignificant.
Load was 5 500W Quartz lamps & connected to a 30A breaker.

6506. re 10m bootleg operators

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-31 00:00:00 UTC
From: jherman@diamond.sierra.NET
Message-ID: <Pine.BSF.3.96.981231143224.19102A-100000@diamond.sierra.net>
Source record: 154327

Cec, we covered this topic a few years ago. I called the FCC and asked the following question: "If illegal operator is on say, 28.005 MHz, and an amateur begins calling CQ on that same frequency, is the amateur creating intentional interference?"

FCC: "It's impossible to interfere with an unauthorized transmission."

Me: "Okay, now what if that illegal operator shifts frequency to say, 28.015 MHz and continues his QSO. If the amateur also changes to that same frequency and begins calling CQ, is the amateur guilty of intentional interference?"

FCC: "Again, it's impossible to interfere with an unauthorized trans-mission."

Me: "Thank-you very much!"

I'm must say that I'm happy to report that hams *are* carrying on CW QSOs on top of the outbanders. 28005, 28015, 28025, etc., sound like a pile-ups, with that characteristic AM heterodyne being buried under a lot of beeping.

73, and a happy and healthy new year to you Cecil,
Jeff KH6OO / 7

6507. Re: 10 Meter Bootleggers

>Has anybody else noticed the illegal stations on 10 meters?

Yes. About 15 years ago. This is hardly news.

>Usually they
>are on AM in the CW portion of the band, between 28.000 and 28.300, but I
>have even heard them on FM between the repeaters near the high end of the
>band. There are also a few truckers on SSB at other frequencies.

The common 10-meter mobile radio has capabilities in AM, FM, and SSB. They simply use whatever mode fits their fancy.

>These
>people are extremely easy to spot you just need to listen to the
>conversation - no callsigns, and they frequently have a pronounced echo.

Yep.

>All I have is 100 W to a dipole, but I can often get them to move by keying
>my transmitter on top of them. I have found a company that seems to
>specialize in CB and is selling 10 meter transceivers
>(http://www.cbcity.com/export.htm

There are many of these. Copper Electronics is the most well-known.

> what the heck is going on here, are we
>going to be over-run with these people.

It's already happened.

> Just listen between 26 and 28 MHz
>the caos is unbelievable; will 10 m get the same way one day? How long
>will it be before they start interfering with HF aviation traffic?

Perhaps if the ARRL had been less adamant in their "we had to learn Morse so they have to learn it too" stance over the years, there may well be more licensed 10-meter operators and less freebanders today. Thanks again, Oldington!

Someone needs to tell the outbanders to "pump it up", to which they would probably oblige. These days, the serious outbander/CB'er is likely to have more than 1500 watt at his disposal. Don't believe me? Go to a keydown sometime and see for yourself.

Yea...sure....but all CB'ers have NO clue how to deliver
the RF through a good antenna system, especially on the out of band
frequencies....so most amateurs can totally KILL illegal out of
band CB'ers with a modest 100W and a real antenna....HA!!!!!
That's why a little knowledge goes a LONG way...typical CB'er
has little knowledge of REAL radio....I'll take on any of them with 1/10th
the power and BURY them....

[Borrowed from J Herman]: Cec, we covered this topic a few years ago. I called the FCC and
asked the following question: "If illegal operator is on say, 28.005 MHz, and an amateur begins calling CQ on that same frequency, is the amateur creating intentional interference?"

FCC: "It's impossible to interfere with an unauthorized transmission."

Me: "Okay, now what if that illegal operator shifts frequency to say, 28.015 MHz and continues his QSO. If the amateur also changes to that same frequency and begins calling CQ, is the amateur guilty of intentional interference?"

FCC: "Again, it's impossible to interfere with an unauthorized trans-mission."

Me: "Thank-you very much!"

This ones been hashed out here before and of course the answer was as clear as the code/no code debate but it seems rather clear to me that I can call CQ on any frequency without causing malicious interferance to another station, however if the station isn't licenced to be there then I'm not interfering with another radio amateur.

I for one don't bother with the freebanders, my operating time is very limited and I choose to QSY.

Oh sure we believe you Drew, your one of the most credible sources of
information on the newsgroup, that's why everyone respects you so much.
The Outbanders/Freebanders/RealRadioWannabe's can "pump it up" all they
want, most don't have a clue what they're doing and there hasn't been a
signal yet that has interrupted my CW contacts in the low end of the band.
It takes a bit more than "fire to the wire" Rambo to get past my 250Hz
filter, but tell yer boys to keep trying. It's funny to watch you brag about
them.

Wanna guess how far the S moves from 100 watts to 1600 watts Rambo??
Yea boy, we got more fire to the wire, were gonna talk some skipland!!

15 meters has been ROCKIN'!

...rang in the new UTC year with UA0CFC in Nikolaevsk. I went for a
hike this afternoon with my pooch Maggie, and worked my first EVER
Taiwan (BV) station on the way home.

Also worked two JAs, including JA9CWJ at 2.5 watts.

As I got to the supermarket (they have fresh hot bread at 4 p.m. local)
I heard UA0CFC calling CQ and answered. The time rolled to 0000z and
the UTC new year had begun.

Here's to incredible and even mediocre openings in 1999!

Remember, an opening is useless if you don't catch it...

73 es CU all this year (and beyond)

Oh ya! There will definately be more young ham operators in the future. I am 15 (turned 15 a few days ago) and I hold a tech+ license. I am going for my General theory and Extra code tomorrow. I plan to be an Extra in 2 months. I know a few young hams on the radio, and they have no interest on HF or CW. For me, I love CW. Just like the older hams out there. You guys probably got licensed right around the time I did (13). There will be many more generations of hams. Happy New year Everyone!

6533. Help - Info on Yaesu HT interface

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-31 00:00:00 UTC
From: Dan Ingold <Use-Author-Address-Header@[127.1]>
Message-ID: <000401be353a$b62bed60$7023fcd0@dingold.gte.net>
Source record: 154354
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I'm looking for information on the computer interfaces to Yaesu HT's, specifically the FT-51R, FT-50R, and/or VX-1R. Any info on commands, format, comm parameters, etc. would be appreciated.

I currently have (legitimate) ADMS-1D software and cable. But I'd like to experiment in other control and programming options, not provided by the ADMS software. Unfortunately, Yaesu refuses to release interface information.

Since I'm not a regular reader of this newsgroup, I'd appreciate receiving responses by email at "anon1946@anonnet.com" (an anonymous remailer, to foil spammers). I will summarize interesting responses back to the group.

Thanks for help!

Happy New Year Bob
I would say that 619 is high for a 830. I got one that was in good
shape from a guy in Farefax Co. VA. for 400 bucs. this was in 1996. As
far as replacement parts I think you would have to do the same thing as
someone with a old car. I will say this the TS 830 is a real good radio.

Congrats on getting your Tech license. Actually you have lucked into the
best solution. Any multiband antenna can not be as efficient as seperate
single band ant's. Just bear in mind that different ant's will interact
with each other. So, you may need to move them around a bit so they dont
interfere with each other. Have fun and good luck.

>
>

On your portable try wrapping several turns of small hookup type wire
around the radio. Try it either horizontal or vertical. This may help by
coupling this "antenna" to the ferrit rod antenna inside the radio. As for
evening problems, this is likely due to increased signal levels from other
AM stations on the band and/or close by you.

Jim,

I think that it might take a little digging at the law library to locate
the appropriate precedents that establish the interpretation of this
regulation. As you know, the original FAR's and FCC regs are available
at their respective websites, so no particular reposting is really
necessary.

The prank is about ten years old. It's a variation on the "Crazy Glue and iron filings on the disk media" prank.

6546. 10 Meter Bootleggers

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-31 00:00:00 UTC
From: Frank Meredith <mereditf@cadvision.com>
Message-ID: <01be34cb$01e2d180$8f48e4cf@default>
Source record: 154372

Has anybody else noticed the illegal stations on 10 meters? Usually they are on AM in the CW portion of the band, between 28.000 and 28.300, but I have even heard them on FM between the repeaters near the high end of the band. There are also a few truckers on SSB at other frequencies. These people are extremely easy to spot you just need to listen to the conversation - no callsigns, and they frequently have a pronounced echo.

All I have is 100 W to a dipole, but I can often get them to move by keying my transmitter on top of them. I have found a company that seems to specialize in CB and is selling 10 meter transceivers (http://www.cbcity.com/export.htm) - what the heck is going on here, are we going to be over-run with these people. Just listen between 26 and 28 MHz the caos is unbelievable; will 10 m get the same way one day? How long will it be before they start interfering with HF aviation traffic?

73,

Frank

Unfortunately, many CB radios can be unlocked, just like ham radios.

> All I have is 100 W to a dipole, but I can often get them to move by keying
> my transmitter on top of them.

I'm curious. Is it legal for a ham to jam a freebander within a ham band?

Hey Frank
Hell those Damn free banders come up and Jam the local ten meter net.
They have stolen amplifiers from Hams and run very large amounts of
power. You can foget about watching tv or useing the phone in down town
Danielsville GA. The FCC knows about that one in Danielsville and
refuses to do anything. The sent him a cease order and he continues to
run his illeagal radio station. This guy also unlocks these radio to
work out of the band and over modulate for a tax free living. I heard
him say that he report 0 income to the irs. The FCC knows about it and
nothing is done. So where is the crakdown? Yea right. I will be posting
my oppion about the so called FCC crakdown at dirtball.com later today.
I do belive that the FCC really has its hands tied with the cable
companys ripping people off as well as the phone companys slaming
people as well as ripping us off so the FCC isn't going to do anything
about our children band problems.

Buy the cheapest and easiest thing you can find because in a year to 6 months
you will want something else. Radios are like cars, new models come out every
year and the prices drop on the older ones, so buy whatever appeals to you and
start saving your money for the next one

Yes, it is illegal to jam them or even speak to them, you may of course ignore them completely and procede to tune your amp or begin a coversation with someone or even call CQ, but never intentionally jam them

After the incident in rec.radio.cb earlier this year, It's unwise to make such postings, even if you're not serious. (A kid made some postings about equipment for sale, and didn't deliver. Someone sent a pipe bomb to his house. The kid was killed and his mother seriously injured when the bomb went off.) On the remote chance that something should happen, law enforcement takes things very seriously, even if you weren't being serious when you made the post.

Why not just check unfamiliar disks before you put them in your computer, instead of making "death threats"?

Wow! I own one, my wife owns one and my father in law owns one = 3
I have a few friends that the VX1-R also.
None of the above have had any problems over the last 6 months.
My wife and I have both done the stupid drops and bangs that seem to
happen with near new and new HT's.
Our 3 year old put a bite mark in my wifes.
Great Radio, Rich - KK7PL

In the QRZ.com listing of his biographic information, NOVFP states that he was QUOTE Born 1973, St Joesph, MO Confederate States of America (CSA) END QUOTE (sic)

In addition to learning how to spell, NOVFP should check his history. Thirteen states made up the Confederate States of America:

-- The original seven seceding states were South Carolina (Dec 1860), Mississippi (Jan 1861), Florida (Jan 1861), Alabama (Jan 1861), Georgia (Mar 1861), Louisiana(Jan 1861), and Texas (Feb 1861). They adopted the provisional CSA constitution in Montgomery, AL, on Feb. 7, 1861.
-- Four other states seceded by the end of June 1861: Virginia (April 1861), Arkansas (May 1861), North Carolina (May 1861), and Tennessee (June 1861).

These eleven states made up the CSA.

The "border states" of Maryland, Kentucky, and Missouri remained in the Union. Several western counties of Virginia separated from Virginia and formed the state of West Virginia.

Thanks for the comments Cecil. You are probably correct about jamming the freebanders in the CW band being of questionable legality, but it does seem to work. I have sometimes though it would be a good idea for the FCC to get some of the old megawatt VOA transmitters on CB and clean up the spectrum.

73,

Frank

you got the size backwards. 1/4" diameter plugs are the standard for
musical instruments...

1/8 would be the walkman jacks..

AAA wrote in message ...
If you are talking about walkman headphones, then you need 1/4" plugs for
1/4" inch jacks.
1/8'th Jacks and plugs are those big assed monsters which are used for
electronic
keyboards and amplifiers in rock concerts.
You want to use 1/4"th inch "Mini" Jacks.

Gary,

I plan on doing exactly what you said. I'm one of the honest types who believes that if you don't earn it, you don't deserve it. I don't pay much attention to people who hide behind dejanews and hotmail accounts. My local ISP offers web based email that checks my POP account, and uses my REAL identity. I continue to study, although I'm passing all the practice exams with flying colors. The only money I'll spend for a license will be the 6 bucks filing fee, and study materials for future exams.

Oooooh yeah, you are right!
1/4'th inch is bigger.
Duh, I had brain fart!
Last night, I was challenged with the task of figuring out what 8+4 was and I came up with 13.
Then I remembered that 8+4 is 12 and I though "What the hell, I'm brain damaged!!!'.
Either I need to lay off the sedatives or indeed I have lead poisoning as I have been soldering a whole lot recently.
Also, rosin vapor in the eyes make for eyes which hurt very badly. OUCH!

>you got the size backwards. 1/4" diameter plugs are the standard for

On Thu, 31 Dec 1998 07:07:10 GMT, chipster68@my-dejanews.com hastily scratched out the following adumbration:

> I also find it _ODD_ that you constantly equate manhood with some form of >physical violence, maybe you had a poor upbringing ??? Or maybe you get some >kind of masochistic-sexual thrill from the thoughts of someone beating the >daylights out of you ???

I'm sure Burp suffered an absolutely horrific and abusive childhood. A tortured entity, Burp displays a text-book penumbral outer-shell of paranoia and delusional psychosis, with an inner core of pure gelatinous inert matter scintillatingly being emoted in his prose. Probably drowning the horrors of his pitiful existence in gallons of 100 proof liquor and hundreds of anti-psychotic / anti-depressant and mood altering drugs weekly. A more classic case of fundamental mental derangement characterized by defective or lost contact with reality one could not possibly find in any medical reference.

Burp Fisher is more than likely a meager and feeble little man with a sallow countenance living consumed by trepidation and squalor. Frail, a week and savagely beaten soul and psyche, depressed and spiritually oppressed, pallid and pellucid in both vigor and appearance, Burp couldn't muster up enough energy to whip cream and I'm astonished that Burp can gather up enough physical strength to lift his hands to the keyboard let alone inflict physical punishment upon another human being. These dreadful attributes are certainly behind the gruff alter-ego fantasy persona Burp has created for use through a quasi-anonymous media that protects him for the most part from the physical retaliations of those that he angers enough to want to do so.

Sure must suck to wake up and while wiping the sleep from your eyes, realize in absolute physical and emotional terror that you are doomed once again to endure yet another day of being Burp Fisher. In my wildest nightmares, I couldn't imagine living like Burp does. And if I were dealt this kind of blow by the hand of fate somehow and I found myself in Burp's position, I surely would do the honorable thing by killing myself immediately. In this way I would be sparing those around me and the rest of the world's population the grief and torment of being forced to dwell on the same planet as I.

greetings and happy new year

I have been am amateur radio experimenter? I am trying to get a gist of where amateur radio is going. What technologies are presently being developed, that we wil be using past the year 2000.
Since the mid 60's. I used cw, for the most part, up until the early 70's when fm got it's foot hold in the metro area. I got on packet radio in 1985 when ax.25 was acepted as the packet standard.
I have now been on the internet for about 2 years, now.
http://members.home.net/larya/ve3fxq.htm
FM seemed to be the chosen mode most of vhf/uhfers and local qso's during the 70's and 80's. Packet made it's presences known during the later 80's and 90's.

Now I am trying to find out where amateur radio is going. I have heard about spreadspectrum and coherent cw.
Much like packet, both spread spectrum and cohent cw require new? equipment to get onto it.

Is s/s being used and where? Is coherent cw being used and where? Is anything else being used and where?
etc etc.

Larry ve3fxq

Excellent, Greg!

CU on the bands. I started at 15 and am now 29 - best hobby in the
world because it can coexist and even mingle with everything else,
and give you a better understanding of how the world actually "works"
should you choose to pursue it.

Ever wonder how/why microwave ovens work?

We can actually experiment with resonant cavities and waveguides.

How about DSS dishes?

We can experiment with preamps, transmitters, and receivers and
converters.

How about shortwave propagation?

We can actually USE it, first hand.

How about TV transmitters?

We can BUILD them if we want.

When we see a young ham, we are seeing tomorrow's engineer or
physicist or computer scientist WHO CAN ACTUALLY SEE THE WORLD
IN A PRACTICAL WAY.

This is a rare, rare skill in today's world.

Think about what YOU have gotten out of ham radio. Try to
imagine, had you never gotten into it, how much less you'd
understand about

Physics
Electronics
Computers
Antennas

which, no matter how you want to see the world, are EVERYwhere!

Not to mention:

Psychology (ever been in a pileup?)
Perseverance (ever been in a pileup?)
Great ears (ever worked a really weak one?)
Friends all over the world
A new challenge every time you flip the radio on

Before you badmouth ham radio, think about what you've
gotten from it without you EVEN KNOWING IT.

Ever gone somewhere and had lots of friends you knew or,
maybe, had NEVER met in person, in advance of your trip,
who'd be happy to invite you out to dinner?

Welcome to ham radio.

Hmmm...Fred, it's been a few years, but I think you have the two backwards. The B model ages faster. The W model was used for HD government applications a about a generation ago. My dad and I had pairs in both the TS-520 and 530 radios (when they were THE choice for DXpeditions...man, times change!!)

FCC Regulation, part 22.925: Prohibition of airborne operation of cellular
telephones.

"Cellular telephones installed in or carried aboard airplanes, ballloons or
any other type of aircraft must not be operated while such aircraft are
airborne (not touching the ground). When any aircraft leaves the ground,
all cellular telephones on board that aircraft must be turned off. The
following notice must be posted on or near each cellular telephone installed
in any aircraft:

"The use of cellular telephones while this aircraft is airborne is prohibited by FCC riles,
and the violation of this rule could result
in suspension of service and/or file. The use of cellular tepephones
while this aircraft is on the ground is subject to FAA regulations""

anyone wanting to verify this personally can go to:
http://www.fcc.gov/wtb/rules.html and access Part 22, Subpart II, for
themselves.

The reason for this is that an airborne cellphone can illuminate multiple
sites in a system which reuse the same channel (which would not normally
see a single station) and hence cause interference to the system.

6588. Weather and Burt Fisher

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-31 00:00:00 UTC
From: BColenso@aol.COM
Message-ID: <7c791f5f.368ac295@aol.com>
Source record: 154426

Recently, I was on DeJaNews and did a search on Burt Fisher. There was an article posted just a few days ago by a gentleman on a list having to do with NE WEATHER complaining about Burt.

It seems that Mr. Fisher also gets on this WEATHER related newsgroup, and does the same things there as he does on the ham radio news groups.

I sent this post from DeJaNews to the Ham-L list. I have deleted some of the automated stuff to save space, and got down to the meat and potatoes.....

==========
Hi All (this is by me)

I was doing a search in DeJaNews, and came across this. Remember what we said before about Burt being needing to be the center of attention? Looks like Burt does the same thing on a WEATHER list as he does on the Ham-L list.

This message was forwarded to you from Deja News by bcolenso@aol.com.

(beginning of original message)

Subject: Flames
From: hizname@mci2000.com
Date: 1998/12/27
Newsgroups: ne.weather
I will add my voice to the many urging cessation of the flames. I read this newsgroup to see opinions on potential upcoming events; no one here is being paid to forecast and all opinions are the individuals. I hope this newsgroup can go back to pure meteorology discussion and viewpoint.

I've never heard of Mchnidiot before, but I can assure that Burt Fisher will continue to escalate flames with each reply. I remember him being thrown off numerous Rimenet groups in the days before the Internet was widely available. Totally ignoring the posts is the only possible solution, with the exception of filtering him out of your newsreader.

(end of original message)

One of the new comers to the Ham-L list asked a question, and here is Burt's reply.
==========
---DesStrmVet@AOL.COM wrote:
> Why would anyone get on a list that talks about weather, and start "flaming"

Should outrageous predictions be left to stand?
>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

What difference does that make to you, Burt? How does what these people discuss on their weather list affect you or your family?

[by Burt]
<<<<
Should people think that a snowflake is more more important than human life be left to think that?
>>>>
[by me]
Show me where ONE person on this NE WEATHER list (other than yourself) said such a thing, and I will apologize to you on this and the other lists AND I will meet you on the air and apologize to you there. Now, I'm not talking about YOU writing something and say that *someone* send this to you, but sight a list archive, or a name or list in DeJaNews or something where we can all look it up. It will, of course, have to have been written BEFORE your original *Re: Flames*, which made the list 98-12-29 07:32:36 EST.

If You want to run Your amplifier, why do not run a 220 line? I remember quite a while back I was runing a Yaesu FL2100B on 120v and my High voltage was droping almost 400 volts. I thought that was the way thinks supose to work, then I finished a homebrewed job and brought in 220, in one of the tests, i blew up the PS on the HB and went back to the Yaesu but i thought it would be interesting to hook it up on 220. S U R P R I C E !!!! the HV droped only about 150 volt and the output from 350!! watt went up 600 Good luck 73 De WA1WLA

>You want to use 1/4"th inch "Mini" Jacks.

Your logic is flawed. Take out a ruler and measure 1/4 of an inch
(that's a quarter of an inch) and 1/8 of an inch. You'll see that the
1/4" plugs are the bigger of the two. 1/8" are typically used for
walkman headphones, etc. 1/4" are typically used for pro audio
applications, studio headphones, and the like.

Message-id: <367d6f60.85756040@news.mindspring.com>

I invented this cool computer prank and wanted to share it with you,
my friends. I call it "The Really Mess Up Somebody's Floppy Drive Big
Time" prank. ⊠1998 Mr. Footwash⊠

Here's what you do: Carefully disassemble a 1.44 meg floppy disk that
you don't need anymore. Take a piece of sandpaper and cut out two
circles the same size as the disk you found inside the floppy disk.
Glue them together back to back. Place your sandpaper disk back
inside the floppy housing and reassemble.

Here's the tricky part! You have to properly bait your trap. Place a
floppy label on your floppy bearing something like "Naked Pix of My
Ole Lady" or "Bootleg Software". Anything that will get your sucker
to try and use the disk.

Leave the disk where your victim will find it. Be sure they won't be
using YOUR computer to check it out. When your sucker pops it in his
floppy drive, he won't be don't much reading of ANY disks!

Have fun with the "The Really Mess Up Somebody's Floppy Drive Big
Time" prank. ⊠1998 Mr. Footwash⊠

Happy Holidays!
-Mr. Footwash

I agree with you. I paid $550 for one in 1995, and the prices have been holding steady. Very good radio. Have not ordered replacement parts so can't address that issue. Just for safety, I found a tech manual so I can try some home repairs, if needed.

I am curious. How are they supposed to "hack it" when they can't sell
advertising like commerical stations? Do they not, by law, have to depend upon
contributions?

6604. 6146B vs 6146W

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-31 00:00:00 UTC
From: turner@safety.ics.uci.edu
Message-ID: <9812301946.aa15889@paris.ics.uci.edu>
Source record: 154442

Hello all -

I know that the 6146W is a hardened 6146A, as I bought
them to install in my HW-101 back in '71 or so. They were
tough tubes.

Now, I have the TS 830 and it wants to see the 6146B tubes.
Are the 6146W tubes OK to install in there, too? I see
that the W tubes are cheaper. I don't really care about a
little less output from my 830, but do care if the tube specs
are a lot different so that I risk damage or distortion.
Anyone know how this works out?

Are the 6146W tubes OK to install in there, too?

Clark-

I believe the gain of the two is the same, but the B version has a higher plate dissipation. Power output may not be different initially, but the W version will probably age rapidly, if the additional power is really needed.

6608. Re: Weather & Divorce & Packet & Burt Fisher

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-31 00:00:00 UTC
From: chipster68@my-dejanews.com
Message-ID: <76f6av$4ha$1@nnrp1.dejanews.com>
Source record: 154446

Even though he's gone through a divorce himself he used to post in alt.support.divorce and he made the same type of trolls (and was disliked as much) as here in r.r.a.m. , he also was banned by many packet control ops from passing his trolls through their systems.

I wonder what type of upbringing he had? He seems to constantly equate manhood with using physical violence against someone.

Perhaps he's one of those masochistic types that gets some kind of weird (sexual ??) pleasure out of humiliation and/or the thoughts of being attacked ?? One thing for sure is that out of about 100 newsgroups I'm subscribed to Burt Fisher is a one-of-a-kind SOB.

Perhaps you can give a _good_ reason why a RATIONAL person would want to ???

> I do not know whether you are a mental midget but you certainly are a
> gutless midget.
>

I'd find it _REAL_ odd if any of the mostly decent, above average
intelligence, family men that I know as hams ever did resort to any physical
violence other than to protect themselves or their family. Maybe you're
expecting (hoping ??) someone will jump in a car/plane and travel across
several states just to beat some poor feeble minded troll such as yourself
???

I also find it _ODD_ that you constantly equate manhood with some form of
physical violence, maybe you had a poor upbringing ??? Or maybe you get some
kind of masochistic-sexual thrill from the thoughts of someone beating the
daylights out of you ???

6610. Re: Cool Computer Prank ©1998 Mr. Footwash©

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-31 00:00:00 UTC
From: Joe Schlatter <w4hh@3wave.com>
Message-ID: <hpEi2.2849$Eg3.17522@news13.ispnews.com>
Source record: 154448

Dear Mr. Footwash:

Here is my practical joke that I will use on anyone who applies yours to my computer.

1. Unlock case holding 9-mm S&W.
2. Unlock and remove trigger lock from 9mm S&W.
3. Place 15 9-mm rounds in magazine.
4. Insert magazine into pistol.
5. Pull slide to rear and release.
6. Track down the SOB who ruined my 1.44 floppy drive and put 15 big holes in his/her chest.
7. Clean S&W, return to case.

Seriously, Mr. Mouthwash, what you suggest is juvenile. The fact that my 9mm S&W will blow big holes in people does not give me the right to blow holes in people with it. The fact that you could probably do what you suggest does not give you license to do so.

Grow up.

Typically you won't find used gear for sale at a local ham shop for the same price that you see for instance in rec.radio.swap , the dealer has something called _overhead_ to contend with and also probably provides some kind of warranty for the equipment and may have even spent time checking it's operation. Personally I'd _hate_ to have to put bread on the table and pay the rent from the profits of a ham shop in todays market. It's your choice, you can pay a bit more and have the convenience of a local ham store (for a while longer yet) or buy mail order and have that be your only source of ham supplies in the future.

Well, actually you'll have about a 10% voltage sag in a 180' run of #12
carrying 20A. The Code is based on temperature rise. That's why the
insulation type matters. There will be a voltage drop across the resistance
generating that heat.

This man is obsessed with me. I sure hope he is not gay but I am concerned he is as he has seen my picture and never misses an opportunity to give me attention.

I like his posts but I am concerned about his unnatural obsession.

Most MEN would act as you indicate, most hams would toss the children IN THE
LINE OF FIRE to save their own butts.

Maybe you're

Not at all.

I just hate the habits of hams. They do not matter enough to be bitter at.
